Abstract

This project is about re-establishing Maryland Avenue as an pedestrian corridor. Increasing pedestrian traffic along this axis will physically reconnect the Capitol Building to the Jefferson Memorial and provide the opportunity for commercial and cultural revitalization.

Consideration of the urban scale led to studies of circulation, context, pedestrian orientation and their applicability to the design of a single building.
Acknowledgements

I wish to thank all of my fellow students and faculty whose assistance helped make me and this project better.

Joe Wheeler
Kyle Bergman
Jack Scott
Nigel Hiscock

Thesis committee:
Gregory K. Hunt, Chairman
Jaan Holt
Susan Piedmont-Palladino

My thanks to anyone not named here for their passing critiques and comments. Though I didn’t use all of their suggestions, I appreciated their interest in me and in the project.

I would also like to thank my parents, sister, her family and Valerie for believing in me. Their undying support gave me the strength to fight through the rough times.

Most of all I would like to thank Ed Rahme and his wife Marianne for their tenacious passive-aggressive efforts that finally made me understand the importance of finishing what I start. True friends are hard to find. I value their friendship more than they know.
