

Assembly Sequence Optimization and Assembly Path Planning

by

Jayavardhan N. Marehalli

Thesis submitted to the faculty of the
Virginia Polytechnic Institute and State University in partial fulfillment of the
requirements for the degree of

Master of Science

in

Mechanical Engineering

Robert H. Sturges, Jr., Chair

Michael P. Deisenroth

Arvid Myklebust

Charles F. Reinholtz

September 1999

Blacksburg, Virginia

Keywords: Liaison diagram, constraints, index of difficulty, principal contacts

Acknowledgements

- First of all I would like to thank Dr. Bob Sturges for giving me an opportunity to work on the assembly problem. His insight and vast knowledge in the area of automation (well, in engineering) shall remain a source of inspiration for me. I thank Dr. Sturges for supervising my work and guiding me through these last two years.
- I would like to thank Dr. Deisenroth, Dr. Myklebust and Dr. Reinholtz for taking the time to be on my committee.
- Special thanks to Keith Wright, Will Vest, Randy Waldron, and Jeff Snider for their excellent support during the course of this work. It is due to their efforts that this work has been made possible. I learnt a lot from their rich experience and my association with them during the course of my stay here at Virginia Tech has been very rewarding.
- My project mates – Mohan and Steve, guys it has been great working with you. Thanks for your support and for putting up with me for so long!
- My sister, Deeptha Setlur and brother-in-law, Anand Setlur have been of great help and support. They made me feel comfortable when I first landed here two years ago and I thank them for their constant encouragement and motivation.
- My friends here at Virginia Tech – Aashish, Ajay, Anuj, Baddy, Kalyan, Karthik, Maya, Pavan, Satish, Sindhu, Suhas (the list goes on). Thanks a lot for making my stay here at Virginia Tech truly enjoyable.
- Finally, the people who matter most, my parents. I would like to thank them for their constant support and encouragement. They sacrificed a lot to ensure that I got good education and imbibed good values. Thanks a lot amma and appa!

Table of Contents

Abstract	i
Acknowledgements	ii
Table of Contents	iii
List of Figures	v
List of Tables	vii
1 Introduction	1
1.1. Objective.....	3
1.2. Assembly Sequence Planning.....	4
1.2.1. Background in Assembly Sequence Planning.....	6
1.3. Assembly Path Planning – Contact State Recognition.....	8
1.4. Organization.....	10
2 Assembly Sequence Planning	11
2.1. Heuristic.....	12
2.1.1. Definitions.....	12
2.1.2. Algorithm to find an optimum assembly sequence.....	13
2.1.3. Design of the end effector.....	14
2.2. Development of an example.....	16
2.2.1. Liaison technique.....	16
2.2.2. Calculation of IDs.....	24
2.2.3. Design of a gripper.....	25
2.3. Limitations of the heuristic.....	27
3 Assembly Path Planning – contact state experiments	30

3.1. Background in Assembly Path Planning – Contact State Recognition.....	31
3.1.1. Contact state representation.....	31
3.1.2. Contact state recognition	35
3.2. Experiments to Validate the Notion of PCs And CFs.....	35
3.2.1. Experimental apparatus.....	36
3.2.1.1.Merlin robot.....	36
3.2.1.2.JR3 Force/torque sensor.....	37
3.2.2. Experimental set-up.....	38
3.2.3. Methodology and experimental results.....	39
4 Conclusions and future work.....	51
4.1. Assembly Sequence Planning.....	51
4.2. Assembly Path Planning.....	52
References.....	54
Appendix A – Merlin Robot.....	58
A-1 Types of Motion.....	62
A-2 Powering up the robot.....	64
A-3 Power-up Calibration.....	66
A-4 Frames of Reference.....	66
A-5 Absolute and Relative points.....	68
Appendix B – JR3 Force/torque sensor.....	69
Vita.....	70

List of Figures

Figure 1.1 The different steps in assembly automation.....	2
Figure 2.1 The small engine used to demonstrate the heuristic.....	15
Figure 2.2 The liaison diagram for the engine example.....	16
Figure 2.3 Graphical representation of the liaison diagram.....	20
Figure 2.4 Graphical representation of the feasible assembly sequences after applying the precedence constraints.....	21
Figure 2.5 3D view of the grasping of the flywheel.....	26
Figure 2.6 Freebody diagram showing forces and moments in grasping the flywheel....	26
Figure 2.7 Example of the grasping configuration grasping the piston.....	27
Figure 3.1 Example to show indistinguishable states due to uncertainties.....	34
Figure 3.2 The Merlin Robot with the six axes shown.....	36
Figure 3.3 Faceplate mounted on the robot arm, direction of robot's axes.....	38
Figure 3.4 Contact-state experiment set-up.....	38
Figure 3.5 The CF graph generated by the automatic planner.....	40
Figure 3.6 A schematic of the 'peg' and the 'corner'.....	42
Figure 3.7 Schematic to show forces and moments in neighboring contact states $(e_1^c - e_1^p, e_2^c - e_2^p)$ and $(e_1^c - e_1^p)$	43
Figure 3.8 The peg and the corner in the CF $(e_1^c - e_1^p, e_2^c - e_2^p)$	43
Figure 3.9 The peg and the corner in the CF $(e_1^c - e_1^p)$	43
Figure 3.10 Schematic to show forces and moments in neighboring contact states $(e_1^c - e_1^p)$ and $(e_1^c - v_2^p)$	43
Figure 3.11 Example to show indistinguishable contact states	

by force/torque sensing.....	47
Figure A-1 An illustration of the three wrist motions of the robot.....	59
Figure A-2 A schematic of the driver boxes and modular controller.....	60
Figure A-3 A schematic of the ARMotion controller interfacing with the teach pendant and motor drives.....	61
Figure A-4 Circuit diagram showing the interface of switches on the interconnect box and the interconnect module.....	62
Figure A-5 Circuit diagram of the power supply.....	63
Figure A-6 The interconnect module.....	63
Figure A-7 Circuit diagram of the wiring in the driver boxes.....	64
Figure A-8 Calibration marks on each of the six axes of the robot.....	67

List of Tables

Table 2.1	Precedence constraints used in the engine assembly example.....	19
Table 2.2	The feasible assembly sequences after applying the constraints.....	22
Table 2.3	The IDs computed for the first feasible assembly sequence.....	22
Table 2.4	The IDs computed for the second feasible assembly sequence.....	23
Table 2.5	The IDs computed for the third feasible assembly sequence.....	23
Table 3.1	Forces/torques obtained for the CFs shown in Figure (3.5).....	44
Table 3.2	Forces/torques expressed as ratios of changes for each of the Neighboring CFs identified in Figure (3.5).....	48
Table A-1	Axis Rotation limits for the Merlin.....	58
