

## **Acknowledgments**

First and foremost my thanks go to my graduate committee chairman, Dr. Richard J. Neves, for making this project possible and for his patience and review of my work. He helped open my eyes to an aquatic world beyond fish and taught me to appreciate and love the smaller, less popular creatures. I would like to thank Dr. Eric M. Hallerman for his advice, encouragement, and manuscript review, Dr. George S. Libey for his aquaculture advice, and Dr. Bruce C. Parker for his algae identification. I thank Dr. Francis X. O'Beirn for his help and advice in bivalve culture system design, construction, and maintenance.

My gratitude is extended to the Virginia Department of Game and Inland Fisheries for funding this project in its entirety.

I also thank Braven B. Beaty and Mark Kidd for their advice and assistance at the aquaculture center, Brian T. Watson for his help and support, and the occasional technician for their assistance in the laboratory or field. I thank Cheng-liang Yang for providing his "bed" culture system for my use.

I express my appreciation to Dr. Arthur J. Bulger at the University of Virginia for his encouragement and in making it possible for me to become actively involved in research as an undergraduate. My getting this far is undoubtedly in part due to him.

Finally, I thank Marcel C. Geltner for his field assistance and immeasurable emotional support, and my parents, Dr. John P. and Inga-Britt Steg for their financial and emotional support throughout my educational career and beyond.

## Table of Contents

Acknowledgments	iv
List of Figures	viii
List of Tables	viii
<b>Introduction</b>	
General	1
Mussel Decline in North America	2
Life History of Unionids	3
Pollution and its Impact on Fishes and Mussels in the Upper Tennessee River Basin	5
<b>Chapter One: Host Fish Identifications</b>	
Introduction	9
Materials and Methods	
Mussel Collection	10
Host Fish	13
Infestations	16
Results	18
Discussion	22
<b>Chapter Two: Mussel Culture Experiments</b>	
Introduction	29
Materials and Methods	
<u>Experiment One: Comparison of Culture Systems</u>	
<i>Juvenile Mussel Production</i>	32
<i>Culture System Design</i>	33
<i>Sediment Preparation</i>	34
<i>Algae Culture and Feeding Regime</i>	35
<i>Growth &amp; Survival Measurement &amp; Analysis</i>	37

<u>Experiment Two: Sediment Type and Water Hardness Effect</u>	
<i>Juvenile Mussel Production</i>	38
<i>Sediment Substrate Preparation</i>	38
<i>Algae Culture and Feeding</i>	39
<i>Culture System Design</i>	39
<i>Growth &amp; Survival Measurement &amp; Analysis</i>	40
Results	
<u>Experiment One: Comparison of Culture Systems</u>	41
<u>Experiment Two: Substrate Organic Content and Water Hardness Comparison</u>	45
Discussion	
<u>Experiment One: Comparison of Culture Systems</u>	51
<u>Experiment Two: Substrate Organic Content and Water Hardness Comparison</u>	57
Growth and Survival Comparison with Other Culture Experiments	60
Recommendations for Juvenile Mussel Culture and Suggestions for Further Research	61
<b>References</b>	64
Appendix A: Juveniles of <i>Lampsilis fasciola</i> produced from host fish species.	74
Appendix B: Quality analysis for water at Virginia Tech Aquaculture Center.	75
Appendix C: Ingredients in the Fritz F/2 algae fertilizer.	76
Appendix D: Composition of Aqua Bacta-Aid (ABA).	77
Appendix E: Analysis of water chemistry in the Clinch River, Virginia.	78
***** For Appendices F-Q see attached files apenf.pdf - apenq.pdf *****	*
Appendix F: Dissolved oxygen levels measured weekly during the bed and dish culture system trial.	*
Appendix G: pH levels measured weekly during the bed and dish culture system trial.	*
Appendix H: Water hardness levels measured weekly during the bed and dish culture system trial.	*
Appendix I: Un-ionized ammonia levels measured weekly during bed and dish culture system trial.	*
Appendix J: Temperatures measured weekly during the bed and dish culture system trial.	*

Appendix K: Concentration of algae in bed and dish culture systems at each feeding; reported per 1 ml of water in culture system.	*
Appendix L: Dissolved oxygen levels measured weekly during the hardness/ organic culture trial.	*
Appendix M: pH levels measured weekly during the hardness/ organic culture trial.	*
Appendix N: Water hardness levels measured weekly during the hardness/ organic culture trial.	*
Appendix O: Un-ionized ammonia levels measured weekly during the hardness/ organic culture trial.	*
Appendix P: Temperatures measured weekly during the hardness/ organic culture trial.	*
Appendix Q: Concentration of algae in culture systems at each feeding; reported per 1 ml of water in each culture system.	*

\*\*\*\*\* For Figures 1-9 see attached files fig1.pdf - fig9.pdf \*\*\*\*\*

### List of Figures

Figure 1. Schematic of low-maintenance sediment bed for culturing juvenile mussels.	*
Figure 2. Schematic of high-maintenance dish system for culturing juvenile mussels.	*
Figure 3. Valve dimensions of a juvenile mussel.	*
Figure 4. Survivorship of juveniles in the dish and bed culture systems over the 16-wk culture period.	*
Figure 5. Growth in shell height of juveniles in the dish and bed culture systems over the 16-wk culture period.	*
Figure 6. Growth in shell length of juveniles in the dish and bed culture systems over the 16-wk culture period.	*
Figure 7. Decline of mean percent survival of juvenile mussels in the water hardness and substrate organic content culture treatments.	*
Figure 8. Growth in shell height of juveniles in the water hardness and substrate organic content culture treatments.	*
Figure 9. Growth in shell length of juveniles in the water hardness and substrate organic content culture treatments.	*

### List of Tables

Table 1. Status, distribution, and periods of gravidity of study mussel species listed in Virginia.	11
Table 2. Preferred habitat types of mussel species listed in Virginia.	12
Table 3. Collection locations of target mussel species and gravidity observations.	14
Table 4. Cited host fish for target mussel species.	15
Table 5. Host fishes, number of transformed juveniles, and transformation periods for two mussel species.	19
Table 6. Results of infestation of various fish species with glochidia of 4 mussel species.	21
Table 7. Decline of mean percent survival for juvenile mussels in the dish and bed culture systems.	42
Table 8. Decline in mean percent growth for juvenile mussels in the dish and bed culture systems.	43
Table 9. Decline of mean percent survival of juvenile mussels in the water hardness and substrate organic content culture treatments.	46
Table 10. Growth in shell height for the water hardness and substrate organic content culture treatments.	48
Table 11. Growth in shell length for the water hardness and substrate organic content culture treatments.	49
