WordPress

-Use current drag and drop templates to create child templates
We will be using drag and drop templates to create the vt themed wordpress templates. These templates will be a foundation for the templates that we want to create as they will provide already usable code for us to use. Child templates are when we take a current template and use its current code to create another template
Tools

- BitNami/WordPress
  - PHP
  - HTML
  - CSS
  - Notepad++
  - Google Chrome (Developer tools)
- Overwrite vs override

● Overwrite
  ○ copy all code over to use
  ○ bigger, more control over template

● Override
  ○ Only alter snippets of code affecting child
  ○ Smaller and simpler
  ○ Can make use of parent theme updates
Eclipse

WORDPRESS THEME

CyberChimps
Worth A Thousand Words

boat, lake

Boat.

Boat
These two picture slides show a current drag and drop template that we will possibly use as it has similar format as current vt sites, and other similar look and feels that we can use to create a consistant look between our templates and other vt templates.
