## **Introduction**

The Norfolk-Virginia Beach-Newport News Metropolitan Statistical Area (MSA), popularly known as the Tidewater region, is the 30<sup>th</sup> largest metropolitan area in the United States and is one of the few metropolitan areas that are not dominated by a large central city. The geography of the area has traditionally promoted a pattern of decentralized growth along the region's multiple rivers and the mouth of the Chesapeake Bay, which have promoted multiple nodes of commerce and shipping. The tidewaters of the Atlantic Ocean have shaped the regional development pattern into a multi-nucleated complex serviced by a spaghetti bowl of federal and state highways.

Community Housing Partners Corporation contracted the Virginia Tech Center for Housing Research (VCHR) to perform a homebuyer market analysis for the Tidewater Region, concentrating on first-time homebuyers in the affordable housing market. In addition to analyzing this market for the MSA, the analysis focuses on the six major jurisdictions within the MSA: the cities of Virginia Beach, Norfolk, Portsmouth, Chesapeake, Hampton and Newport News.<sup>1</sup>

This report summarizes the findings of that analysis. The primary focus of the analysis is on projections of first-time owner demand in targeted income ranges from 2000 to 2010, as well as the supply of housing affordable to these buyers.

## **Methodology and assumptions**

First-time homebuyers are a subset of the total demand for owner-occupied housing. The VCHR Housing Demand Model projects the number of owner and renter occupied housing units by household type, age of the householder, and household income. Household types include married couples, other families, and non-family households. Single adults with children constitute the bulk of the "other family" category. Any household with two or more related persons constitutes a family household. Non-family households are single individuals and unrelated roommates.

First-time homebuyers were estimated based on ownership rates controlling for the age of the householder. All homeowners under the age of 25 and between the ages of 25 and 34 were assumed to be first-time buyers during the previous ten years. Those under the age of 25 have only recently started to live on their own and obviously were not homeowners ten-years before. There are also very few householders between the ages of 25 and 34 who were already homeowners ten years previously. The year 2000 ownership rate for householders under the age of 25 for the MSA was 18% and was only 12% among those with incomes below \$60,000. The ownership rate for householders aged 25-34 was 57% for all households and 47% for those with incomes below \$60,000. However, the rate of household formation for married-couple households and for single-parent households increases significantly after age 24. Consequently, our assumption that all owners aged 25-34 were first-time buyers during the previous ten years only overstates the number of first-time buyers in that age group by 10%.

The number of first-time buyers between the ages of 35-44 and 45-54 was estimated based on the difference between ownership rates (controlling for household type and income) at these ages and for the same cohort ten years previously. The incremental rate for first-time buyers for 35-44 year olds is

---

<sup>1</sup> The MSA includes additional jurisdictions to these six cities that are not separately analyzed.

the difference between ownership rates for 35-44 year olds and 25-34 year olds. The incremental rate for first-time buyers for 45-54 year olds is the difference between the ownership rate for 45-54 year olds and 35-44 year olds. Few owners aged 55 and over are first-time buyers so this age group was excluded from our analysis.

The number of first-time homebuyers was projected to 2010 using the VCHR Housing Demand Model. The projections included household type, age of householder and income. The projections for 2010 provided in this report represent first-time buyers during the current decade. Consequently, an easy approximation of the average level of annual demand is one-tenth of the projection for 2010. (Annual demand levels are highly influenced by interest rates, employment patterns and current prices for units on the market, which can vary significantly from year to year. The VCHR Housing Demand Model reflects demographic trends that influence housing demand. Interest rates and unemployment rates are assumed to remain constant at their level in the base period, the year 2000. The decline in interest rates after 2000 has stimulated a significant increase in ownership demand, including an increase in first-time buyers. Whether these increased levels of demand will be sustained during the decade remains uncertain.)

The targeted incomes for first-time buyers identified by Community Housing Partners Corporation are between 30% and 120% of the Area Median Family Income (AMFI). The AMFI for the metropolitan area in 2000 was \$48,000. This income range is further divided into 30-50% AMFI, 51-80% AMFI, 81-100% AMFI, and 101-120% AMFI. The actual income limits at each of these levels are adjusted for household size and consequently overlap, as shown in Table 1. The income categories are defined for the metropolitan area and applied to any jurisdiction within that area.

**Table 1. Income Categories from 31%-120% AMFI**

Income range (\$ 2000)			
31-50%	51-80%	81-100%	101-120%
\$16,800 – 31,700	\$26,900 – 50,700	\$33,625 – 63,375	\$40,350 – 76,050

**Total First-time Homebuyers**

Table 2 provides our estimates of first-time buyers for the MSA and the six local jurisdictions, for the time periods of 1990-2000 and 2000-2010. There will be approximately 39,000 first-time buyers with incomes between 31% and 120% of the AMFI in the MSA from 2000 to 2010, a slight decline from the 1990 to 2000 level. Annually this represents an average of 3,900 first-time homebuyers in the MSA in the targeted incomes, ranging from approximately 220 per year in Portsmouth to 1,220 per year in Virginia Beach. Except for Chesapeake, the number of first-time homebuyers is expected to decrease slightly during the current decade as compared to the 1990s.

**Table 2. First time Homebuyers (31% AMFI to 120% AMFI)**

			Change between decades
	1990 - 2000	2000 - 2010	
MSA	40,723	39,141	-1,582
Chesapeake	5,341	5,746	405
Hampton	3,791	3,207	-584
Newport News	5,302	4,903	-399
Norfolk	5,095	4,656	-439
Portsmouth	2,478	2,233	-245
Virginia Beach	12,623	12,233	-390

Source: Census 2000 and VCHR model

### First-time Homebuyers by Income

Ownership demand increases steadily with increased income and most households with high incomes are homeowners. Lower income households are more likely to be in the renter market. Overall ownership rates by income category are provided in Table 3 and range from 29% to 80% from extremely low-income households to those with incomes above 120% of the AMFI.

**Table 3. Ownership Rates by Income, Tidewater Metro Area, 2000**

LT30	30-50	50-80	80-100	100-120	120+
29.4%	41.0%	50.3%	59.2%	67.8%	79.7%

Source: Census 2000 and VCHR model

The number of first-time homebuyers in a given income category reflects the total number of households in that category and the percent of first-time owners, controlling for age. It also reflects differences in the width of income categories. For example, the 51-80% AMFI category has the largest number of first-time buyers but is also one-and-a-half times as wide as the other categories shown in Table 4.

**Table 4. First-Time Buyers by Income, 2001-2010**

	Income Range			
	31-50%	51-80%	81-100%	101-120%
MSA	5,156	13,160	10,340	10,484
Chesapeake	717	1,934	1,504	1,591
Hampton	443	1,098	932	734
Newport News	631	1,650	1,290	1,332
Norfolk	702	1,806	1,093	1,055
Portsmouth	371	802	524	537
Virginia Beach	1,274	4,285	3,334	3,340

Source: Census 2000 and VCHR model

The number of first-time buyers estimated for income categories above 50% AMFI is substantial larger than for the 31-50% AMFI category. Table 4 clearly shows that the bulk of the targeted market is in the income categories above 50% AMFI, although there are an estimated 515 first-time buyers annually in the 31-50% AMFI category in the MSA.

As shown in Table 5, the number of first-time buyers is expected to decline slightly during the current decade compared to the 1990s, except for Chesapeake. This decline is expected to be larger in the 51-80% AMFI category than the other targeted income categories. Although the number of first-time buyers is projected to decline, it is important to remember that there will be nearly 40,000 first-time buyers in the metropolitan area in the targeted income range during the current decade.

**Table 5. Change between Decades in First Time Buyers by Income**

	Income Range			
	31-50%	51-80%	81-100%	101-120%
MSA	-160	-774	-349	-298

Hampton	-84	-261	-128	-112
Newport News	-56	-177	-76	-96
Norfolk	-84	-191	-82	-82
Portsmouth	-34	-94	-61	-56
Virginia Beach	-22	-149	-134	-86

*Source: Census 2000 and VCHR model*

### **First time Homebuyers by Household Type**

Table 6 shows the estimate of first time homebuyers for the three different household types, for all the local jurisdictions and MSA as a whole. Married-couple families are the most likely household type to be homeowners and are approximately 2.5 to 3 times the number of first-time buyers in the other family and non-family household categories. Although families account for three-fourths of all first-time buyers, the number of non-family first-time buyers is projected to exceed single-parent first-time buyers in the targeted income range.

**Table 6. First Time Buyers by Household Type, 2000 - 2010 (30%-120% AMFI)**

	Married Couple	Other-Family	Non-Family
MSA	22,334	7,737	9,070
Chesapeake	3,247	1,267	1,232
Hampton	1,627	642	938
Newport News	2,802	991	1,110
Norfolk	2,414	935	1,307
Portsmouth	1,117	555	562
Virginia Beach	7,159	2,373	2,700

Source: Census 2000 and VCHR model

In order to better understand these housing demand projections, we have segmented the projected demand in targeted first time homebuyers into four age groups for families (under 25, 25-34, 35-44, and 45-54). (Age detail for non-families is not available.) The first-time homebuyers market is heavily influenced by a person's age. Young adults are typically better off renting than owning, at least until their employment and family lives are better established. The impact of age on homeownership is so strong that more than 2-of-3 first time homebuyers are between the ages of 25 and 34 (Table 7). The second largest age group for first-time buyers is 35-44 years old.

**Table 7. Family First Time Homebuyers By Age, 2000 - 2010**

	<25	25-34	35-44	45-54
MSA	1,240	17,368	7,854	3,610
Chesapeake	217	2,706	1,193	398
Hampton	55	1,084	755	375
Newport News	149	2,059	731	855
Norfolk	189	1,691	1,045	425
Portsmouth	26	942	499	204
Virginia Beach	368	5,742	2,660	763

Source: Census 2000 and VCHR model

### **The Supply of Affordable Housing**

The housing supply affordable to first-time buyers in the targeted income range is the number of owner-occupied and vacant for sale units that could be purchased with a maximum payment of 30% on income at prevailing interest rates (5.75%) and a 5% downpayment. A minimum house price of \$50,000 is assumed necessary for sufficient quality.

The affordable housing supply is estimated for each of the six local jurisdictions and for the metropolitan area. Based on these assumptions, we calculated the maximum house price within each income category. To estimate the number of affordable housing units for each category, we estimated the number of vacant for sale and owner-occupied units from Census 2000 that were between the affordable price ranges for each income category. This interpolation results in the estimated number of affordable housing units for each AMFI income category provided in Table 8.

**Table 8. House Payment and Maximum Price by Income Category**

	Targeted Income Categories			
	@50%mfj	@80%mfj	@100%mfj	@120%mfj
Max income	24000	41450	48000	57600
Max payment	600	1036.25	1200	1440
Max price	\$102,815	\$177,570	\$205,630	\$246,756

Source: Census 2000 and VCHR model

Table 9 provides the estimated total number of affordable housing units in 2000 across each income category. It is important to note that homeowners with incomes higher than the targeted range can also afford the units affordable to lower income categories. The affordable supply for households in the 100-120% AMFI category includes the units listed for all of the income categories below this. Consequently, the number of total units affordable at the 100-120% AMFI category is over 300,000, if they choose to occupy houses priced well below the maximum they can afford. This is typical, as most homeowners prefer not to maximize their housing consumption relative to their income.

**Table 9. Affordable Housing Supply for First-Time Buyers, 2000**

	Targeted Income Categories			
	30-50%	50-80%	80-100%	100-120%
MSA	134,011	129,864	19,199	17,715
Chesapeake	16,750	22,705	3,627	2,930
Hampton	16,206	9,562	690	467
Newport News	17,093	12,464	845	638
Norfolk	20,506	9,011	1,240	1,240
Portsmouth	12,159	4,709	369	303
Virginia Beach	30,891	42,531	6,927	5,947

Source: Census 2000 and VCHR model

A significant portion of this affordable housing stock is occupied by incomes above the targeted range. Consequently the actual supply available to the targeted range is much less than shown in Table 9. In addition, only a small fraction of the total supply is on the market at a given time. The vacancy rate for April 1, 2000 for these units was only 1% to 2% for the MSA average except for units in the 81-100%AMFI range, where the vacancy rate was 7%. Vacancy rates also varied between localities. Assuming an average of 90 days on the market, the number of for-sale affordable units for each income category and location is provided in Table 10.

**Table 10. Estimated Affordable Supply For Sale, 2000**

	Targeted Income Categories			
	31-50%	51-80%	81-100%	101-120%
MSA	6043	10633	5749	923
Chesapeake	404	5763	945	57
Hampton	1152	940	321	15
Newport News	512	1320	743	43
Norfolk	1488	2557	525	38
Portsmouth	908	959	75	37
Virginia Beach	713	2485	1814	414

Source: Census 2000 and VCHR model

Housing prices in the Tidewater area have increased rapidly since 2000, well above the increase in incomes. Although data are unavailable to estimate the full effect of the inflation in housing prices, it has undoubtedly reduced the supply of affordable units, particularly for the 30-50%AMFI category.

### Affordable Demand Relative to Supply

Comparing the demand and supply estimates provided in Tables 4 and 10 requires some adjustment. First, in comparing supply and demand, the affordable supply is the supply estimated for a particular income category plus the supply affordable to incomes below that category less the number of first-time buyers in those lower income categories. As before, a house value of \$50,000 is assumed to be required for satisfactory quality. Second, one-tenth of the estimated number of first-time buyers during the decade is assumed to be in the market annually.

Table 11 provides the ratio of the affordable for-sale supply estimate (from Table 10) to the demand estimate (from Table 4). In 2000, there was an adequate supply of affordable units for first-time buyers across all incomes throughout the MSA. Depending on the income category, from 6 to 45 units were affordable for each first-time buyer on average throughout the MSA.

**Table 11. Ratio of Supply to Demand**

	Targeted Income Categories			
	31-50%	51-80%	81-100%	101-120%
MSA	11.7	12.3	19.9	19.5
Chesapeake	5.6	31.5	45.5	42.5
Hampton	26.0	18.6	24.2	29.7
Newport News	8.1	10.7	18.2	17.0
Norfolk	21.2	22.0	39.5	40.3
Portsmouth	24.5	22.8	34.8	33.7
Virginia Beach	5.6	7.2	13.4	13.6

Source: Census 2000 and VCHR model

In addition, first-time buyers must also compete with repeat buyers for housing. The effect of repeat buyers on the supply of housing for first-time buyers has not been estimated, but repeat buyers are likely to exceed first-time buyers across the income spectrum. One indication of this is the percentage of first-time buyers among all homebuyers in each income category. About 55% of all owners in the

MSA in 2000 were homebuyers during the preceding decade, but this ranged from lows of 43% in Norfolk and Portsmouth to a high of 60% in Chesapeake and Virginia Beach. The owner mobility rates in Hampton and Newport News were 47% and 53%. Using these rates to estimate the number of total homebuyers during the 1990s, the proportion of first-time buyers is provided in Table 12.

For the MSA as a whole, first-time buyers account for 37% to 48% of all buyers depending on the income category. For most localities, first-time buyers make up more of the market in the 51-80%AMFI and the 81-100%AMFI categories, generally ranging from the mid-40 percents to the mid-50 percents. Portsmouth and Norfolk are the exceptions, with much lower first-time buyer shares in the 81-100%AMFI category. In part this reflects the size of the total homebuyer market in this income category in these two cities. However, it can also reflect estimation error at the bounds of a category, which could misplace some buyers in the adjacent income categories.

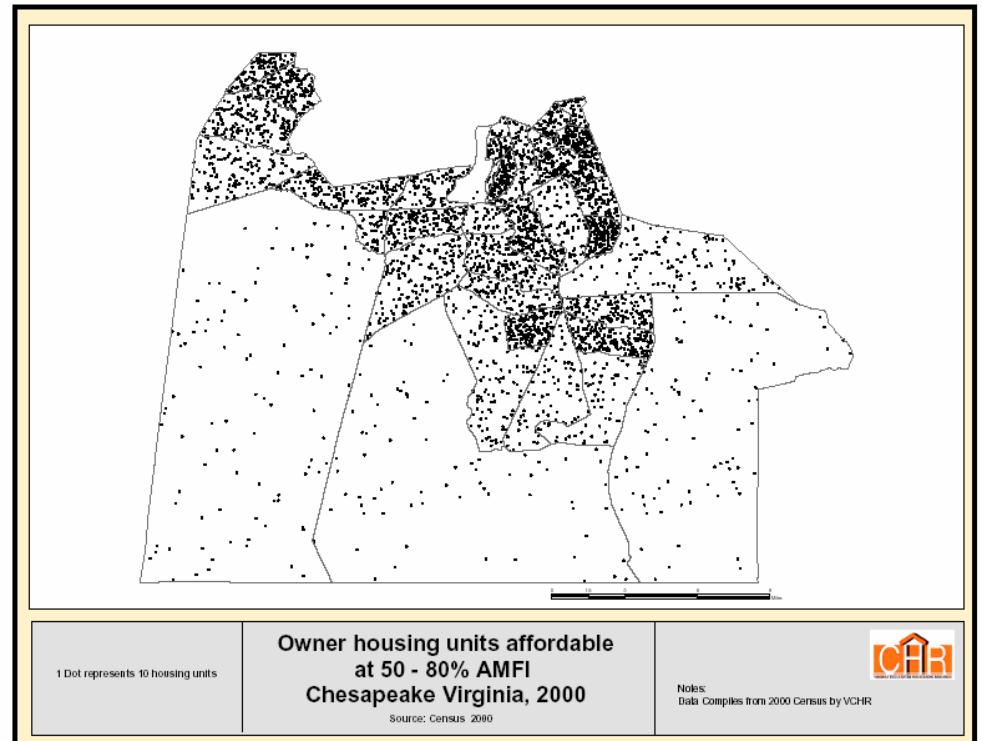

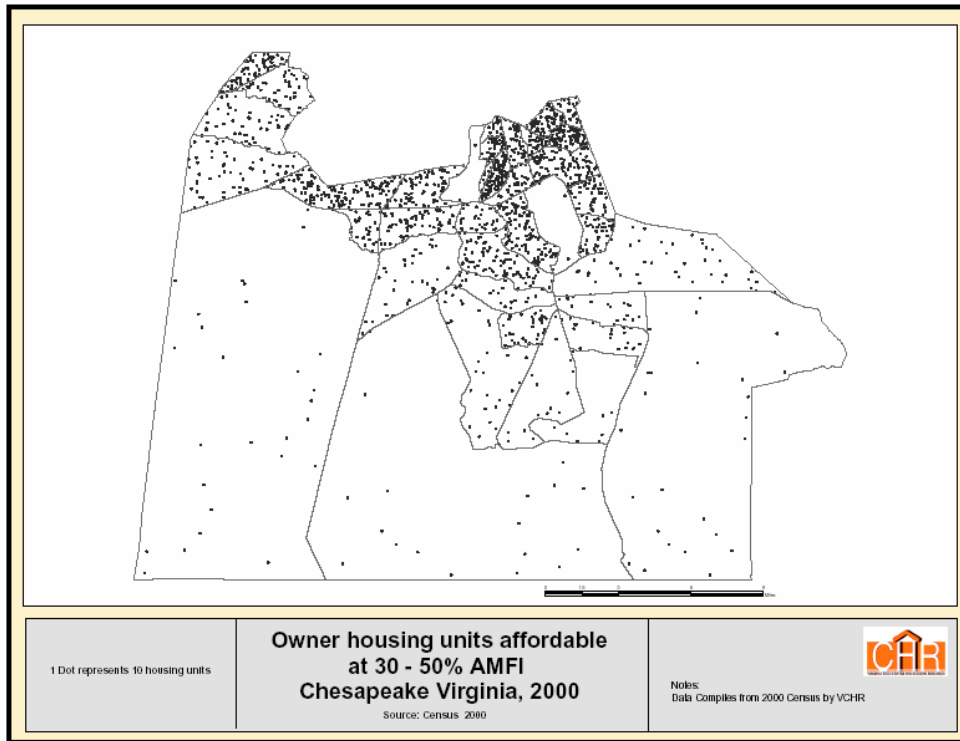

**Table 12. Percent First-time Buyers of All Homebuyers, 2010**

	Targeted Income Categories			
	31-50%	51-80%	81-100%	101-120%
MSA	36.8%	43.1%	47.9%	40.5%
Chesapeake	35.4%	48.3%	46.3%	38.8%
Hampton	34.4%	46.5%	51.5%	37.3%
Newport News	37.4%	53.4%	56.9%	49.9%
Norfolk	23.4%	57.6%	23.9%	69.7%
Portsmouth	20.5%	43.6%	18.9%	62.4%
Virginia Beach	43.0%	58.9%	52.6%	43.8%

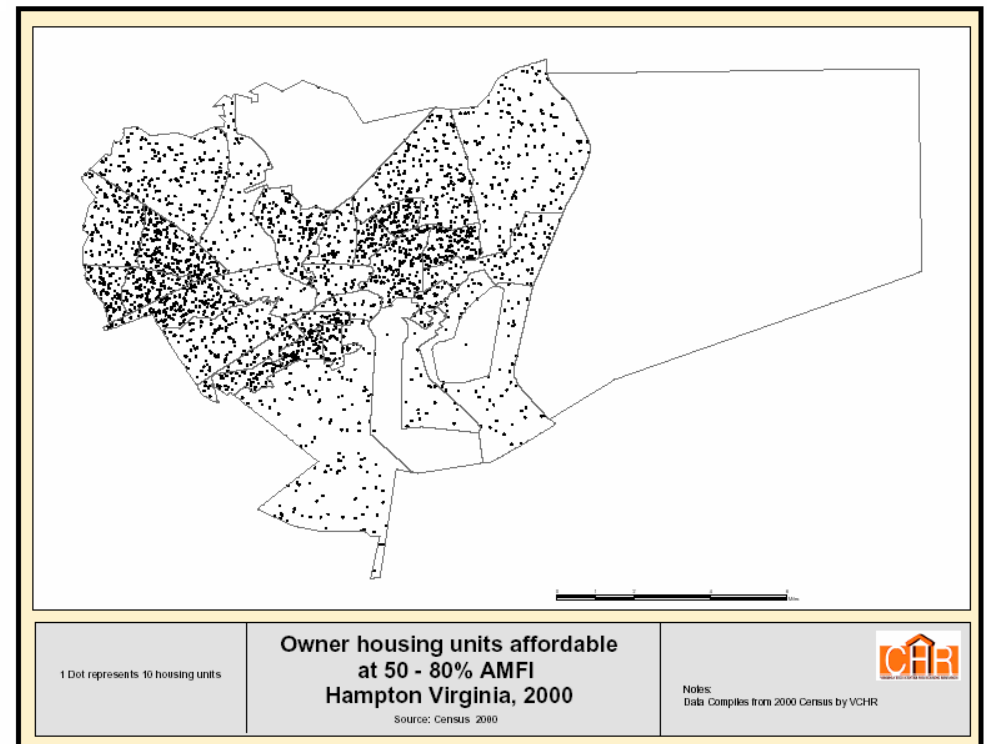

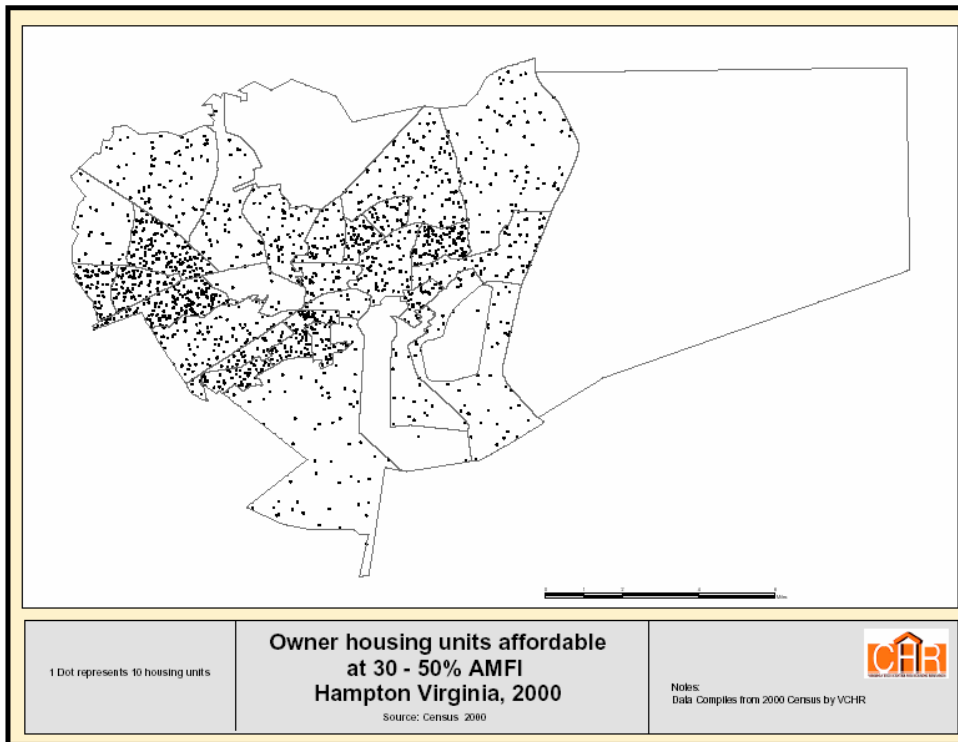

Source: Census 2000 and VCHR model

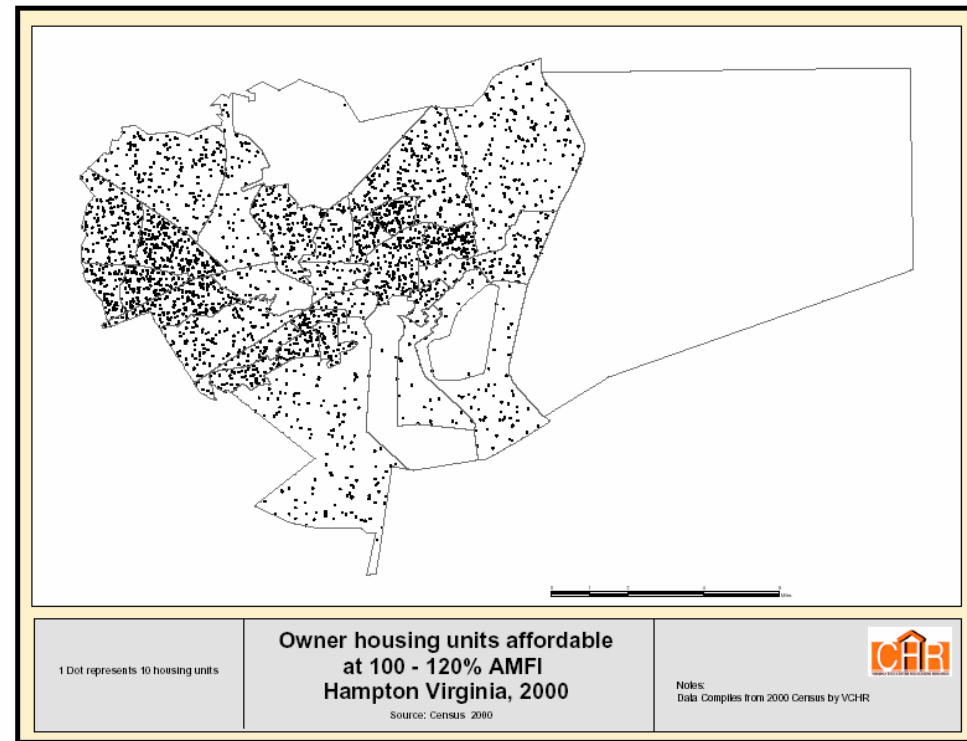

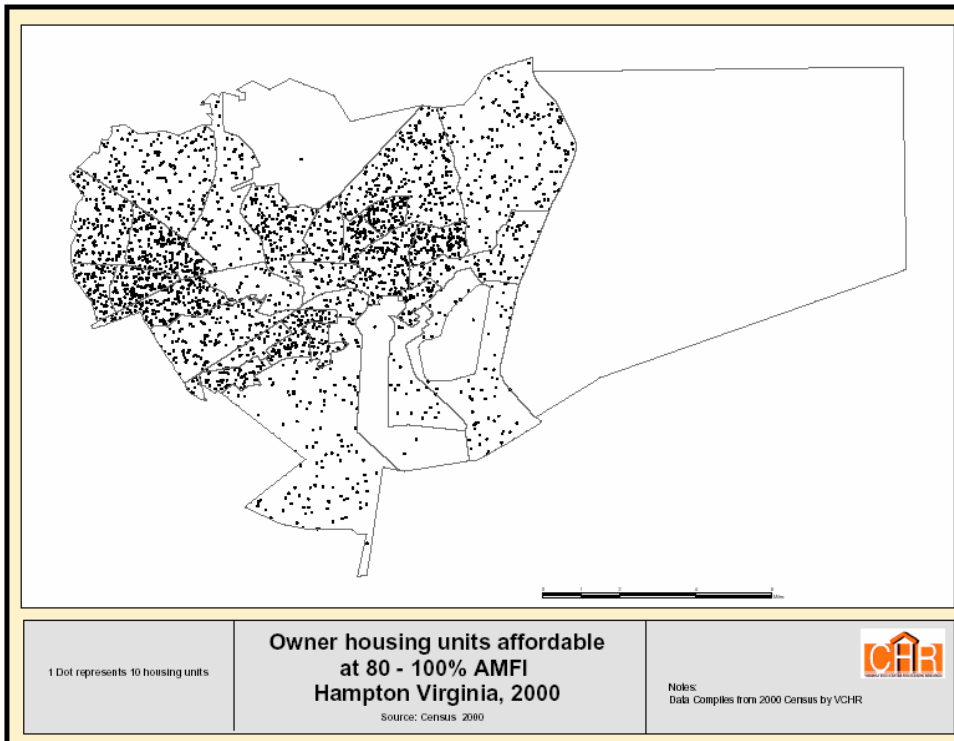

The total supply of affordable housing units is shown by block group in the following maps. The number of units is cumulated as income increases (i.e. those in higher income categories can afford all of the units affordable to lower income categories). It should be noted that these maps provide the total affordable housing supply, not the for-sale supply during 2000. As noted earlier, only a small percent of these units would be available at any given time.

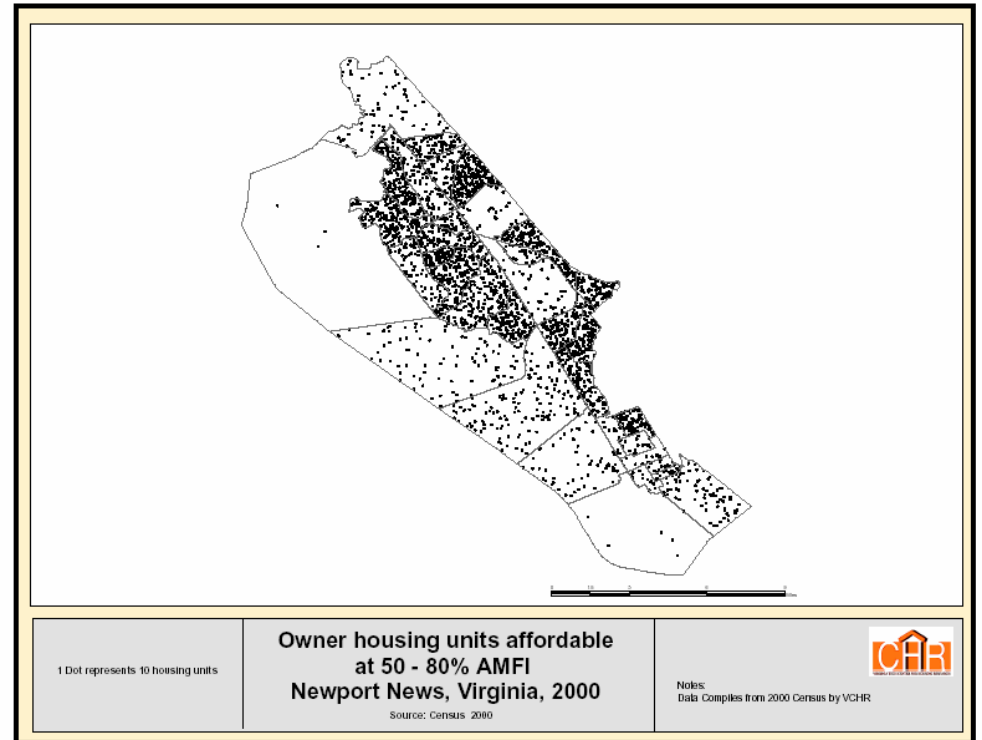

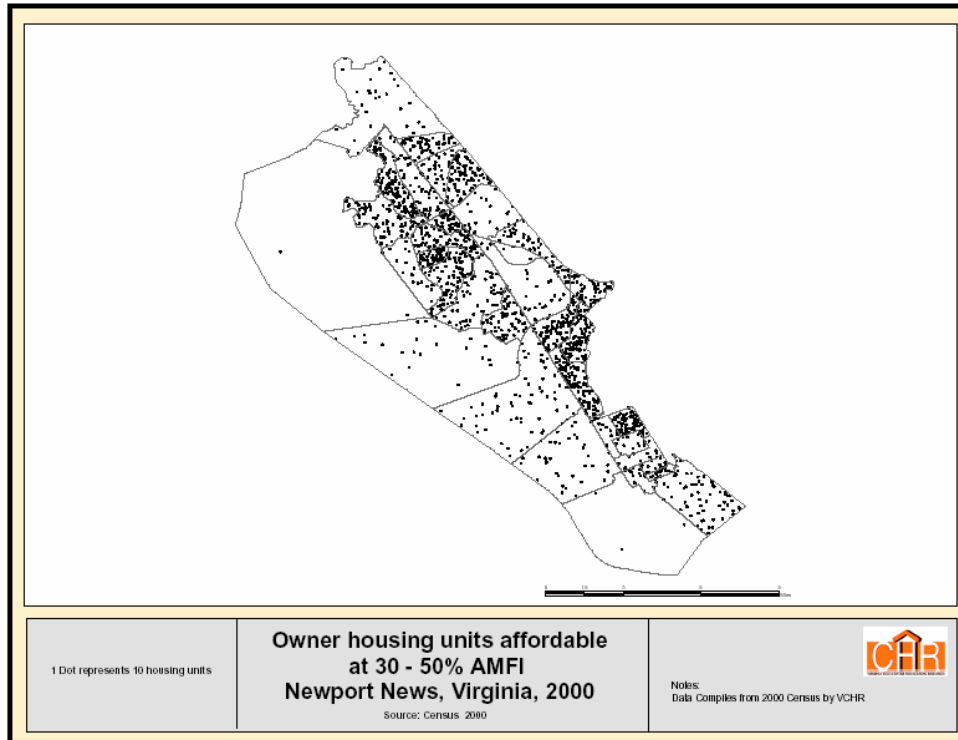

Detailed characteristics of first-time buyers for 2000 and 2010 are presented in the Appendix for each of the localities. These tables can be useful in further analyzing selected submarkets.
