

Single Straight Steel Fiber Pullout Characterization in Ultra-High Performance Concrete

Valerie Mills Black

Thesis submitted to the faculty of the Virginia Polytechnic Institute and State University
in partial fulfillment of the requirements for the degree of

Master of Science

In

Civil Engineering

Cristopher D. Moen, Chair
Carin L. Roberts-Wollmann
Ioannis Koutromanos

May 27, 2014
Blacksburg, VA

Keywords: Fiber pullout, bond slip, Ultra High-Performance Concrete, proximity effect

Draft 09/01/2009

Virginia Tech ETD Fair Use Analysis Results

This is not a replacement for professional legal advice but an effort to assist you in making a sound decision.

Name: Valerie Black

Description of item under review for fair use: Figure 1.2: a) Randomly distributed fibers within the volume, b) fiber intersection with triangular facet. Source: Schaufert, E. A., and Cusatis, G. (2012). "Lattice Discrete Particle Model for Fiber-Reinforced Concrete. I: Theory." Journal of Engineering Mechanics, 826-833.

Report generated on: 06-09-2014 at : 23:33:01

Based on the information you provided:

Factor 1

Your consideration of the purpose and character of your use of the copyright work weighs: *in favor of fair use*

Factor 2

Your consideration of the nature of the copyrighted work you used weighs: *in favor of fair use*

Factor 3

Your consideration of the amount and substantiality of your use of the copyrighted work weighs: *against fair use*

Factor 4

Your consideration of the effect or potential effect on the market after your use of the copyrighted work weighs: *in favor of fair use*

Based on the information you provided, your use of the copyrighted work weighs: *in favor of fair use*
