

The Structure and Function of Amphibian Skin Bacterial Communities and Their Role in
Susceptibility to a Fungal Pathogen

Jenifer Banning Walke

Dissertation submitted to the faculty of the Virginia Polytechnic Institute and State University in
partial fulfillment of the requirements for the degree of

Doctor of Philosophy
In
Biological Sciences

Lisa K. Belden, Chair
Reid N. Harris
Dana M. Hawley
Ann M. Stevens

July 23, 2014
Blacksburg, Virginia

Keywords: amphibian, microbiota, transmission, symbiosis, structure-function, disease, fungus

The author license policy of the Nature Publishing Group (NPG) states that authors of original research papers “can reuse their papers in their future printed work without first requiring permission from the publisher of the journal.” This refers to Chapter 2 of the Walke Dissertation, which is published in NPG’s The ISME Journal.

NPG author license policy

This publishers' policy applies to all journals published by the Nature Publishing Group (NPG), including the Nature journals.

NPG does not require authors of original (primary) research papers to assign copyright of their published contributions. Authors grant NPG an exclusive license to publish, in return for which they can reuse their papers in their future printed work without first requiring permission from the publisher of the journal. For commissioned articles (for example, Reviews, News and Views), copyright is retained by NPG.
