

# **Hierarchical Assembly of Polymeric Nanofibers for Advanced Material Applications**

Ji Wang

Dissertation submitted to the faculty of the Virginia Polytechnic Institute and State University in  
partial fulfillment of the requirements for the degree of

Doctor of Philosophy

In

Engineering Mechanics

Amrinder S. Nain, Chair

Raffaella De Vita

Rakesh K. Kapania

Robert B. Moore

Judy S. Riffle

February 27<sup>th</sup>, 2015

Blacksburg, Virginia

**Keywords:** STEP, isodiametric design space, porous tubes, single nanofiber mechanical properties, hierarchical nanofiber assemblies, cell force measurement

This copy right permission from Nature Publish group pertains the use of Figure 2.1, Figure 2.2 and Table 2.1, Table A1 and corresponding text in Chapter 2 of the Dissertation.

#### Author Request

If you are the author of this content (or his/her designated agent) please read the following. If you are not the author of this content, please click the Back button and select an alternative [Requestor Type](#) to obtain a quick price or to place an order.

Ownership of copyright in the article remains with the Authors, and provided that, when reproducing the Contribution or extracts from it, the Authors acknowledge first and reference publication in the Journal, the Authors retain the following non-exclusive rights:

- To reproduce the Contribution in whole or in part in any printed volume (book or thesis) of which they are the author(s).
- They and any academic institution where they work at the time may reproduce the Contribution for the purpose of course teaching.
- To reuse figures or tables created by them and contained in the Contribution in other works created by them.

This copy right permission from Elsevier pertains the use of Figure 3.1, Figure 3.2, Figure 3.3, Figure 3.4, Figure 3.5, Figure 3.6, Figure 3.7, Table 3.1, Table 3.2, Table 3.3, Table B1 and corresponding text in Chapter 3 of the Dissertation.

### Article posting policy

<< [Open access policies](#)

Elsevier wants to ensure a proper balance between the scholarly rights which authors retain (or are granted/transferred back in some cases) and the rights granted to Elsevier that are necessary to support our mix of business models. We routinely analyze and modify our policies to ensure we are responding to authors' needs and concerns, and the concerns in general of the research and scholarly communities.

There are three stages in a journal article's development that are relevant from a policy perspective: **preprint, accepted author manuscript (AAM) and published journal article (PJA)**. The definition and policy for each is described below.

Pre-print	Accepted Author Manuscript	Published Journal Article
<p><b>Published Journal Articles (PJAs) Definition:</b> A published journal article (PJA) is the definitive final record of published research that appears or will appear in the journal and embodies all value-adding publisher activities including copy-editing, formatting and (if relevant) pagination.</p> <p><b>Elsevier's Policy:</b> Elsevier guarantees each PJA's authenticity, we work with others (e.g. national libraries) to preserve them for posterity and in perpetuity, and we invest to drive their usage. We strictly apply an absolute guideline regarding their location: every PJA will reside only on a completely controlled site because this is the only way that we as the publisher can guarantee each PJA's permanence, authenticity and that it is not altered. The continued viability of scholarly journals and their PJAs is also important to the research community. Publishers invest significant time, money and resources to create, maintain and develop both journals' reputations and the publishing process. The distribution of PJAs is therefore also subject to strict guidelines so that journals' ability to recoup the investments required to create them are not compromised.</p> <p>An author may use the PJA for <b>personal use</b> and <b>internal institutional use</b> (see below for definitions of these terms). In the interest of safeguarding the correct scientific record, however, Elsevier does not permit the posting of PJAs (Elsevier-provided PDF or HTML files) on any open websites. This is to ensure that the final published version of an article, which has been edited and peer-reviewed according to the publishing standards of an Elsevier journal, is always recognized as such only via the journal itself, whether in print or electronic format. PJAs may not be used for <b>commercial use</b> or for <b>systematic distribution</b> (see above for definitions of these terms).</p> <p>The posting of the PJA to websites to fulfill drug regulation authority approval of therapeutic agents is not permitted in accordance to the policy outlined above. Where applicable, Elsevier permits the inclusion of an article title and abstract to fulfill drug regulation authority requirements, provided this is accompanied by a link to the PJA on the publisher's website.</p> <p><b>Posting Policy for Open Access Articles:</b> For open access articles published in either an Elsevier <a href="#">Open Access Journal</a> or via our <a href="#">Open Access Article</a> program, the final published version can be immediately posted on your institution or personal website. Permitted reuse of open access articles are determined by the author's choice of <a href="#">user license</a>.</p> <p>Our existing policy concerning non-posting of published journal articles from subscription journals (see above) is not affected by this.</p>		
<b>Personal use</b>	Use by an author in the author's classroom teaching (including distribution of copies, paper or electronic), distribution of copies to research colleagues for their personal use, use in a subsequent compilation of the author's works, inclusion in a thesis or dissertation, preparation of other derivative works such as extending the article to book-length form, or otherwise using or re-using portions or excerpts in other works (with full acknowledgment of the original publication of the article).	
<b>Internal institutional use</b>	Use by the author's institution for classroom teaching at the institution (including distribution of copies, paper or electronic, and use in course packs and courseware programs). For employed authors, the use by their employing company for internal training purposes.

#### PERMISSION/LICENSE IS GRANTED FOR YOUR ORDER AT NO CHARGE

This type of permission/license, instead of the standard Terms & Conditions, is sent to you because no fee is being charged for your order. Please note the following:

- Permission is granted for your request in both print and electronic formats, and translations.
- If figures and/or tables were requested, they may be adapted or used in part.
- Please print this page for your records and send a copy of it to your publisher/graduate school.
- Appropriate credit for the requested material should be given as follows: "Reprinted (adapted) with permission from (COMPLETE REFERENCE CITATION). Copyright (YEAR) American Chemical Society." Insert appropriate information in place of the capitalized words.
- One-time permission is granted only for the use specified in your request. No additional uses are granted (such as derivative works or other editions). For any other uses, please submit a new request.

This copy right permission from Royal Society of Chemistry pertains the use of Figure 6.1, Figure 6.2, Figure 6.3, Figure 6.4 ,Figure 6.5, Figure E1 ,Table F1 and corresponding text in Chapter 6 of the Dissertation.

## Acknowledgements to be used by RSC authors

Authors of RSC books and journal articles can reproduce material (for example a figure) from the RSC publication in a non-RSC publication, including theses, without formally requesting permission providing that the correct acknowledgement is given to the RSC publication. This permission extends to reproduction of large portions of text or the whole article or book chapter when being reproduced in a thesis.

The acknowledgement to be used depends on the RSC publication in which the material was published and the form of the acknowledgements is as follows:

- For material being reproduced from an article in *New Journal of Chemistry* the acknowledgement should be in the form:
  - [Original citation] - Reproduced by permission of The Royal Society of Chemistry (RSC) on behalf of the Centre National de la Recherche Scientifique (CNRS) and the RSC
