Licensing

This image is in the **public domain** because it is a mere mechanical scan or photocopy of a public domain original, or – from the available evidence – is so similar to such a scan or photocopy that no copyright protection can be expected to arise. The original itself is in public domain for the following reason:

This work is in the **public domain** in its country of origin and other countries and areas where the copyright term is the author's **life plus 100 years or less**.

This work is in the **public domain** in the United States because it was published (or registered with the U.S. Copyright Office) before January 1, 1923.

This file has been identified as being free of known restrictions under copyright law, including all related and neighboring rights.

(<https://creativecommons.org/publicdomain/mark/1.0/deed.en>)

This tag is designed for use where there may be a need to assert that any enhancements (eg brightness, contrast, colour-matching, sharpening) are in themselves insufficiently creative to generate a new copyright. It can be used where it is unknown whether any enhancements have been made, as well as when the enhancements are clear but insufficient. For known raw unenhanced scans you can use an appropriate `{{PD-old}}` tag instead. For usage, see Commons:When to use the PD-scan tag.

Note: This tag applies to scans and photocopies only. For photographs of public domain originals taken from afar, {{PD-Art}} may be applicable. See Commons:When to use the PD-Art tag.

Same as Gray969.png

Description	English: Diagram of an inserted endotracheal tube Deutsch: Schema eines Endotrachealtubus (blau, A; Cuffleitung B), der in der Luftröhre (C) liegt. D: Speiseröhre
Date	May 2008
Source	Modification of http://commons.wikimedia.org/wiki/Image:Endotracheal_tube_inserted.png
Author	PhilippN
Permission (Reusing this file)	United States Patent illustration

In general, the contents of United States patents published **before** March 1, 1989 are in the public domain.[1] (<http://www.uspto.gov/main/ccpubguide.htm>)

In specific cases, patent applicants and holders may claim copyright in portions of those documents. In those specific cases, applicants are required to identify the portions that are protected under copyright, and are additionally required to state the following within the body of the application and patent:[2] (<http://www.uspto.gov/web/offices/pac/mpep/mpep-9020-appx-r.html#d0e320131>) [3] (<http://www.uspto.gov/web/offices/pac/mpep/mpep-9020-appx-r.html#d0e320999>)

A portion of the disclosure of this patent document contains material which is subject to (copyright or mask work) protection. The (copyright or mask work) owner has no objection to the facsimile reproduction by anyone of the patent document or the patent disclosure, as it appears in the Patent and Trademark Office patent file or records, but otherwise reserves all (copyright or mask work) rights whatsoever.

The original patent should be checked for the presence of such language before an assumption is made that the contents are in the public domain. (This template can be replaced by `{{PD-US-patent-no notice}}` in such cases.)

Note: This only applies to images published **before** March 1, 1989. Patents published after that date are most likely copyrighted, unless in the public domain for another reason, such as `{{PD-ineligible}}`.

Licensing

This image is in the **public domain** because it is a mere mechanical scan or photocopy of a public domain original, or – from the available evidence – is so similar to such a scan or photocopy that no copyright protection can be expected to arise. The original itself is in public domain for the following reason:

This work is in the **public domain** in its country of origin and other countries and areas where the copyright term is the author's **life plus 100 years or less**.

This work is in the **public domain** in the United States because it was published (or registered with the U.S. Copyright Office) before January 1, 1923.

This file has been identified as being free of known restrictions under copyright law, including all related and neighboring rights.
(<https://creativecommons.org/publicdomain/mark/1.0/deed.en>)

This tag is designed for use where there may be a need to assert that any enhancements (eg brightness, contrast, colour-matching, sharpening) are in themselves insufficiently creative to generate a new copyright. It can be used where it is unknown whether any enhancements have been made, as well as when the enhancements are clear but insufficient. For known raw unenhanced scans you can use an appropriate `{{PD-old}}` tag instead. For usage, see Commons:When to use the PD-scan tag.

Note: This tag applies to scans and photocopies only. For photographs of public domain originals taken from afar, `{{PD-Art}}` may be applicable. See Commons:When to use the PD-Art tag.
