

List of Tables

Table 5-1. Linear interlaminar shear stress comparison	90
Table 6-1. Failure pressure and location for elliptical graphite-epoxy cylinders, geometrically linear analysis, Hashin failure criterion	94
Table 6-2. Failure pressure and location for elliptical graphite-epoxy cylinders, geometrically linear analysis, maximum stress failure criterion	95
Table 6-3. First fiber failure pressure and location for elliptical graphite-epoxy cylinders, geometrically linear analysis, Hashin failure criterion	97
Table 6-4. First fiber failure pressure and location for elliptical graphite-epoxy cylinders, geometrically linear analysis, maximum stress failure criterion	97
Table 6-5. Failure pressure and location for elliptical graphite-epoxy cylinders, geometrically nonlinear analysis, Hashin failure criterion	100
Table 6-6. Failure pressure and location for elliptical graphite-epoxy cylinders, geometrically nonlinear analysis, maximum stress failure criterion	101
Table 6-7. First Fiber failure pressure and location for elliptical graphite-epoxy cylinders, geometrically nonlinear analysis, Hashin failure criterion	103
Table 6-8. First Fiber failure pressure and location for elliptical graphite-epoxy cylinders, geometrically nonlinear analysis, maximum stress failure criterion	104
Table 6-9. Failure pressure, location, and mode for elliptical graphite-epoxy cylinders, geometrically linear and nonlinear analyses, two failure criteria	105
Table 6-10. Failure pressure, location, and mode for elliptical graphite-epoxy cylinders, geometrically linear and nonlinear analyses, two failure modes, Hashin failure criterion	107
Table B-1. End displacement required to satisfy axial equilibrium corresponding to an internal pressure evaluated using linear analysis	144
Table B-2. End displacement required to satisfy axial equilibrium corresponding to an internal pressure evaluated using nonlinear analysis	145
