This is an Open Access article distributed under the terms of the Creative Commons Attribution License (http://creativecommons.org/licenses/by/4.0), which permits unrestricted use, distribution, and reproduction in any medium, provided the original work is properly credited. The Creative Commons Public Domain Dedication waiver (http://creativecommons.org/publicdomain/zero/1.0/) applies to the data made available in this article, unless otherwise stated.

Copyright

- Copyright on any open access article in a journal published by BioMed Central is retained by the author(s).
- Authors grant BioMed Central a license to publish the article and identify itself as the original publisher.
- Authors also grant any third party the right to use the article freely as long as its integrity is maintained and its original authors, citation details and publisher are identified.
- The Creative Commons Attribution License 4.0 formalizes these and other terms and conditions of publishing articles.

In addition to BioMed Central's copyright policy, some journals also follow an Open Data policy and the Creative Commons CC0 1.0 Public Domain Dedication waiver applies to all published data in these journals. Further information can be found on the individual journals pages.

Where an author is prevented from being the copyright holder (for instance in the case of US government employees or those of Commonwealth governments), minor variations may be required. In such cases the copyright
line and license statement in individual articles will be adjusted, for example to state '© 2015 Crown copyright; licensee Springer'. Authors requiring a variation of this type should inform BioMed Central during or immediately after submission of their article.

**Exceptions to copyright policy**
There may be exceptions concerning copyright and licensing for articles which were previously published under policies that are different from the above. For instance, occasionally BioMed Central may co-publish articles jointly with other publishers, and different licensing conditions may then apply. In all such cases, however, access to these articles is free from fees or any other access restrictions.

Information specifically regarding permissions and reprints can be found [here](#). Please contact us if there are questions.

**Authors' certification**
In submitting an article ('article') to any of the journals published by BioMed Central authors are requested to certify that:

They are authorized by their co-authors to enter into these arrangements.

- They warrant, on behalf of themselves and their co-authors, that:
  - the article is original, has not been formally published in any other peer-reviewed journal, is not under consideration by any other journal and does not infringe any existing copyright or any other third party rights;
  - they are the sole author(s) of the article and have full authority to enter into this agreement and in granting rights to BioMed Central are not in breach of any other obligation. If the law requires that the article be published in the public domain, they will notify BioMed Central at the time of submission;
  - the article contains nothing that is unlawful, libellous, or which would, if published, constitute a breach of contract or of confidence or of commitment given to secrecy;
• they have taken due care to ensure the integrity of the article. To their - and currently accepted scientific - knowledge all statements contained in it purporting to be facts are true and any formula or instruction contained in the article will not, if followed accurately, cause any injury, illness or damage to the user.
• they agree to all terms of the Creative Commons Attribution License 4.0 (and where applicable, Open Policy)

**Open access articles**
The open access articles published in BioMed Central's journals are made available under the Creative Commons Attribution (CC-BY) license, which means they are accessible online without any restrictions and can be re-used in any way, subject only to proper attribution (which, in an academic context, usually means citation).

The re-use rights enshrined in our [license agreement](#) include the right for anyone to produce printed copies themselves, without formal permission or payment of permission fees. As a courtesy, however, anyone wishing to reproduce large quantities of an open access article (250+) should inform the copyright holder and we suggest a contribution in support of open access publication ([see suggested contributions](#)).
