Appendix F Chiral SFC Spectra for **3.7i**, **3.7j** and Standard Compounds **BD22** and **SLM120702**

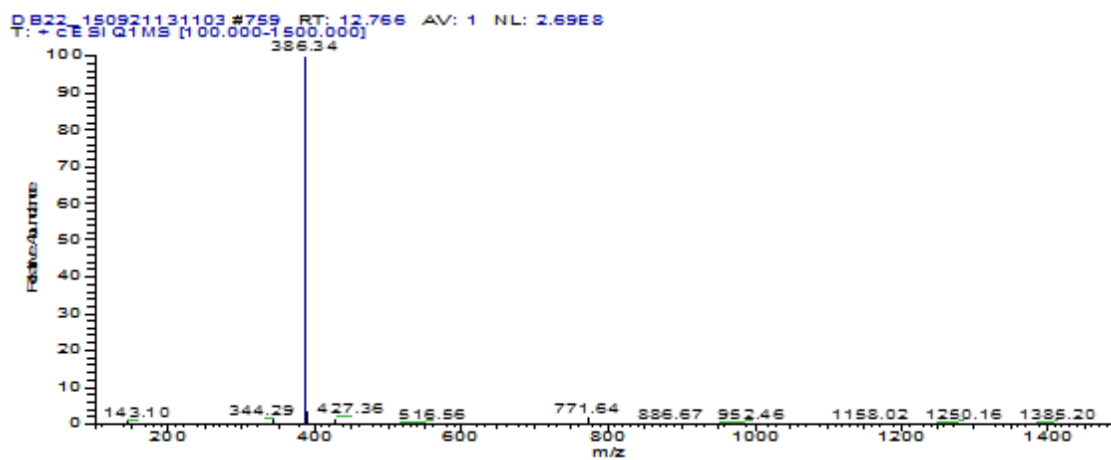

Structure of Standard BD22:

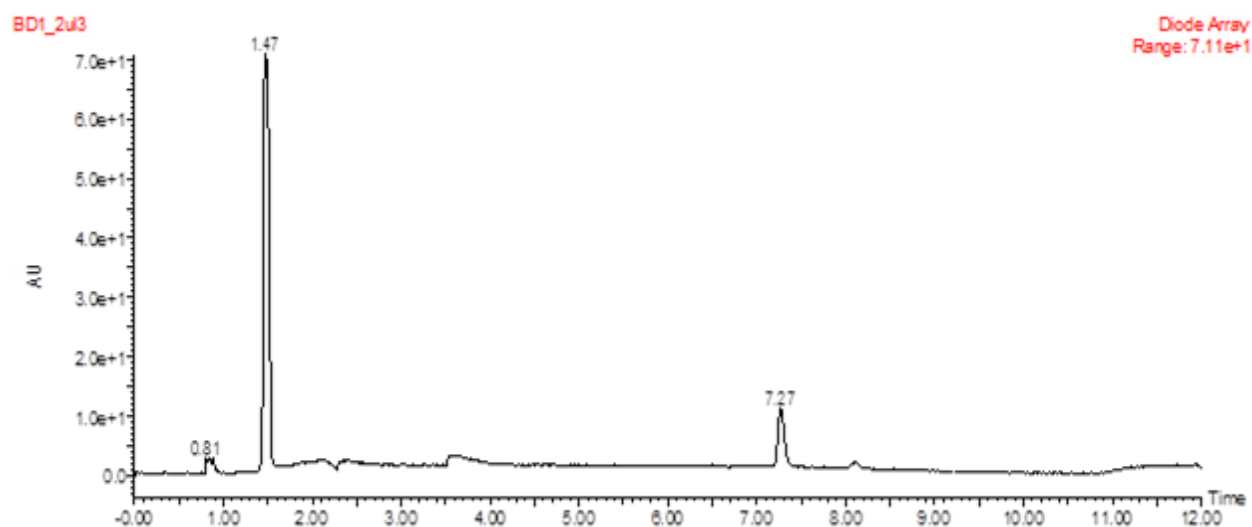

HPLC Spectrum for Standard BD22:

MS Spectrum for Standard BD22:

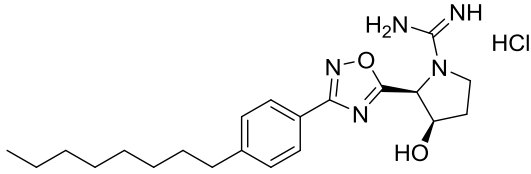

SFC Spectrum for Standard BD22:

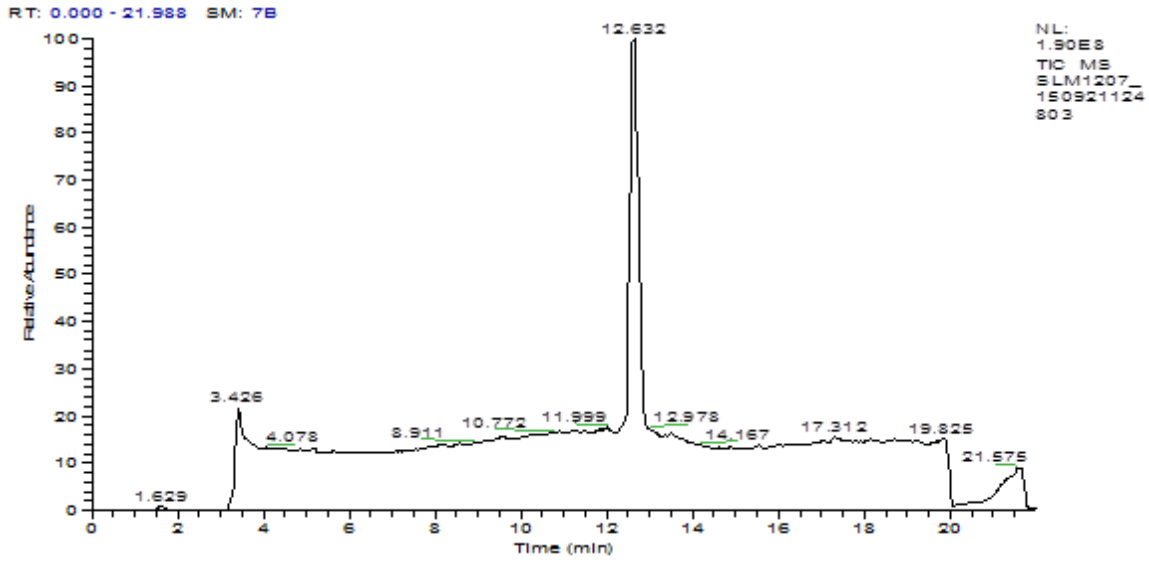

BD22 was originally synthesized by Dr. Mithun Raja using purchased (3*S*)-hydroxy-Boc-L-proline as the head group. As seen in the HPLC and MS spectra, the compound is comprised of one compound with the correct mass. The SFC spectrum indicates that the product is comprised of one diastereomer which has a retention time of 7.27 minutes. The peak at 1.47 minutes is from DMSO solvent.

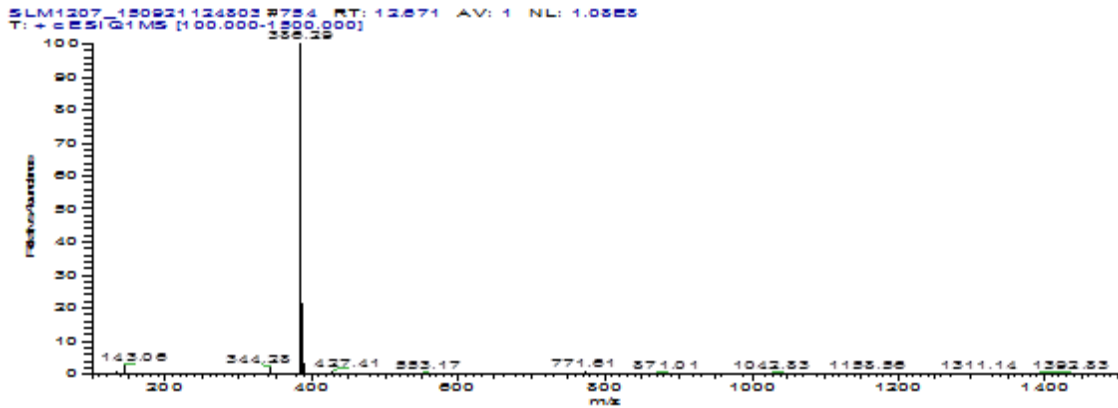

Structure of Standard SLM120702:

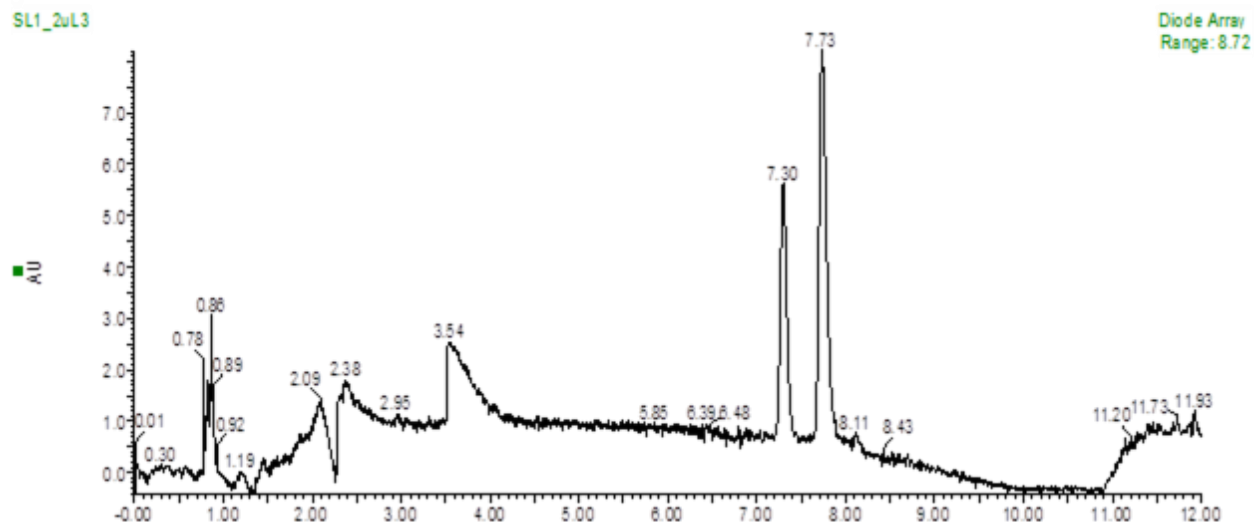

HPLC Spectrum for Standard SLM120702:

MS Spectrum for Standard SLC120702:

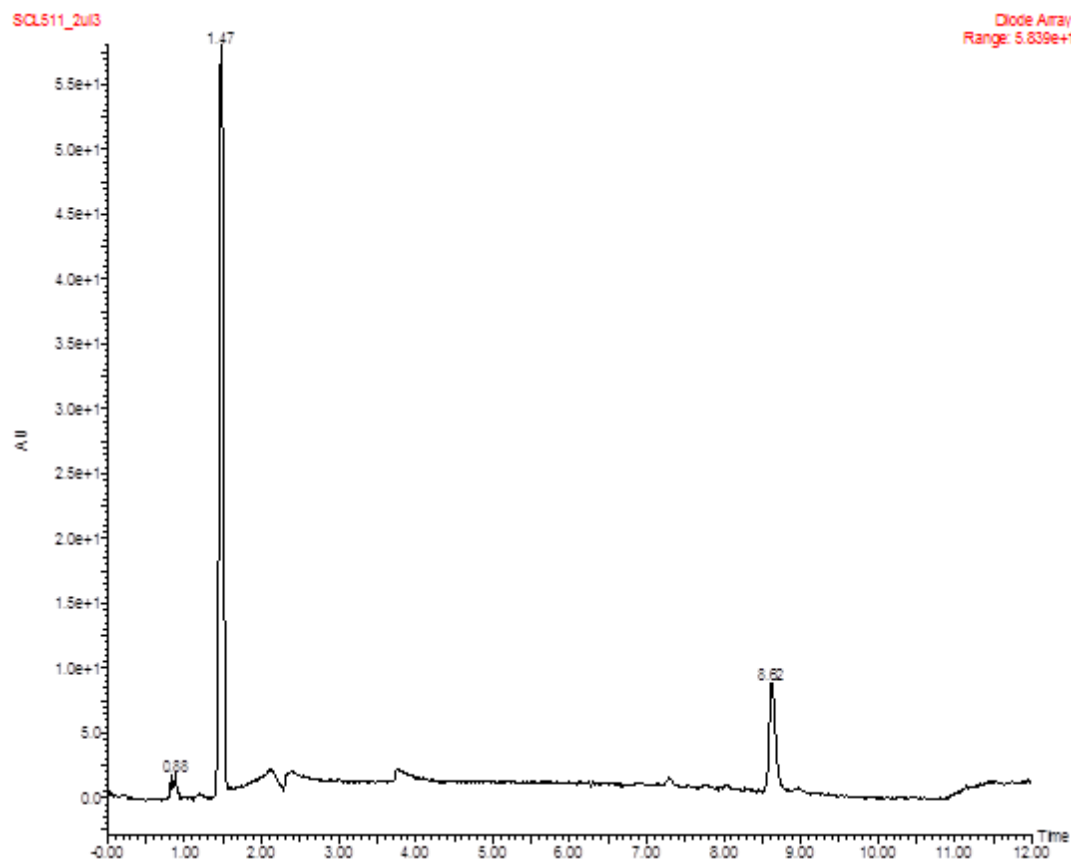

SFC Spectrum for Standard SLM120702:

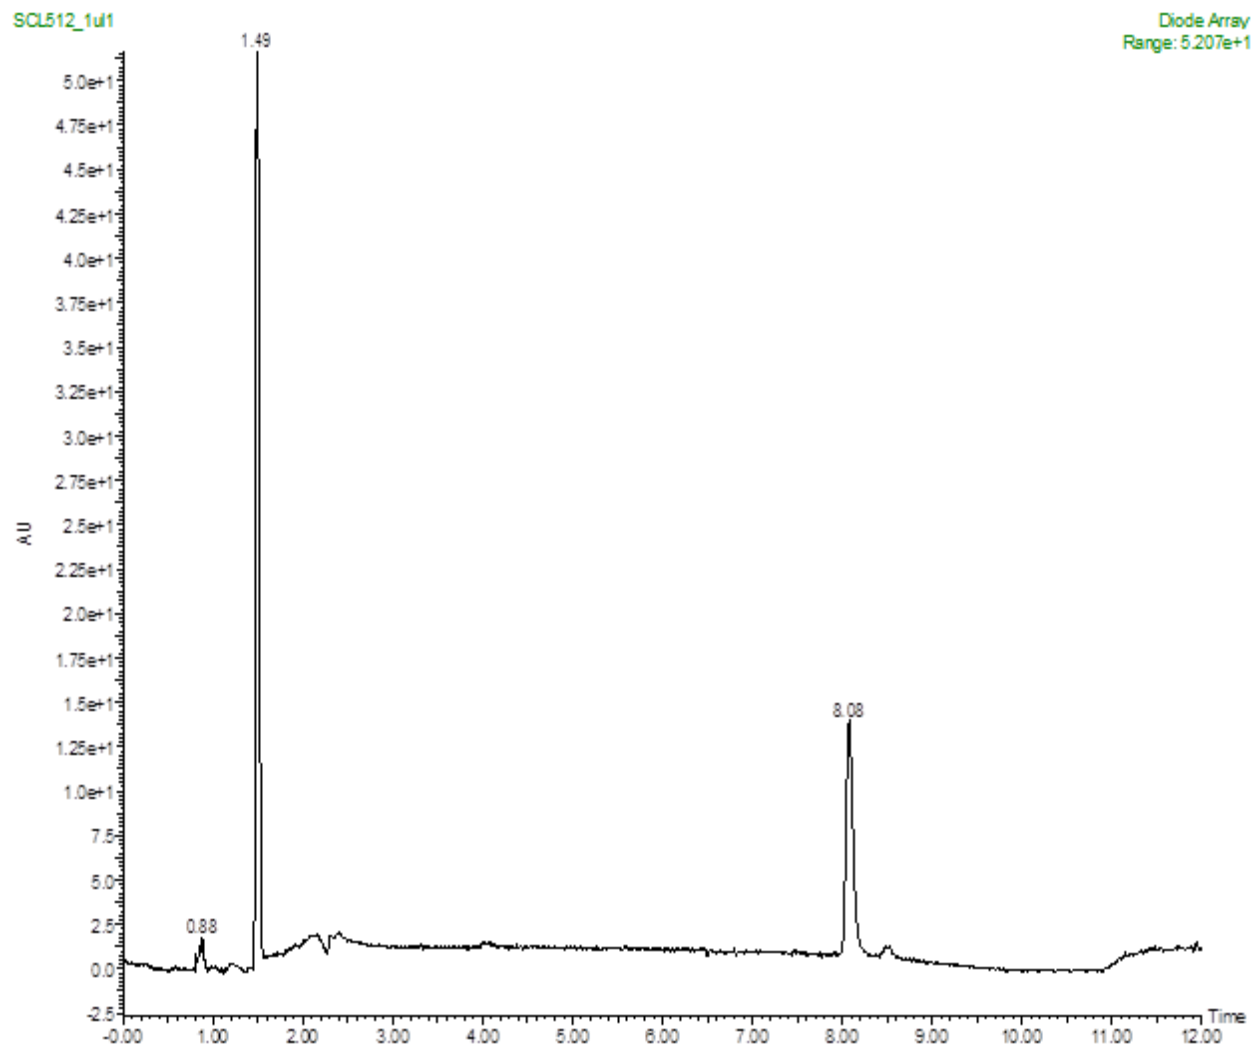

SLM120702 was originally synthesized by Emily Morris using purchased (3*S*)-hydroxy-Boc-L-proline as the head group. The chiral inversion was achieved via a Mitsunobu reaction. As seen in the HPLC and MS spectra, the compound is comprised of one compound with the correct mass. The SFC spectrum indicates that the product is comprised of a mixture of two diastereomers. The first diastereomer, which has a retention time of 7.30 minutes, matched standard **BD22** which did not undergo chemical inversion at the chiral center. The second diastereomer, **SLC120702**, has a retention time of 7.73 minutes.

SFC Spectrum for **3.7i**:

As seen in the HPLC and MS spectra, the compound is comprised of one compound with the correct mass. The SFC spectrum indicates that the product is comprised of one diastereomer which has a retention time of 8.62 minutes. The peak at 1.47 minutes is from DMSO solvent. There is a slight peak at approximately 8.9 minutes from the diastereomer of **3.7i**, indicating that the compound possesses 93% ee. This diastereomer is most likely due to impurities in the purchased starting material.

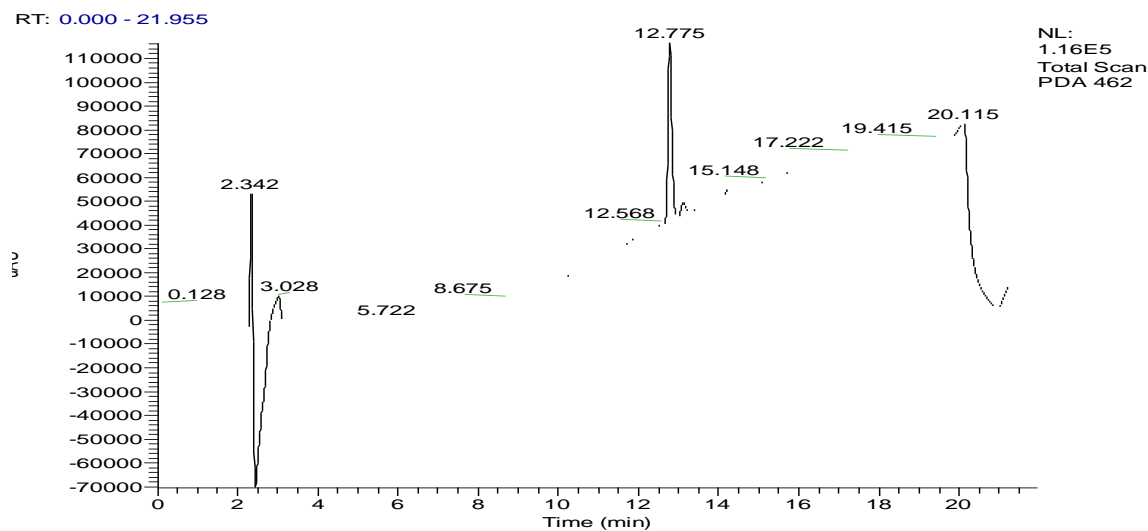

SFC Spectrum for 3.7j:

As seen in the HPLC and MS spectra, the compound is comprised of one compound with the correct mass. The SFC spectrum indicates that the product is comprised of one diastereomer which has a retention time of 8.08 minutes. The peak at 1.47 minutes is from DMSO solvent. There is a slight peak at approximately 8.6 minutes from the diastereomer of **3.7j**, indicating that the compound possesses 92% ee. This diastereomer is most likely due to impurities in the purchased starting material.

Dear Molly Congdon:

This is to grant you permission to include the following article in your dissertation entitled "Structure-Activity Relationship Studies of Sphingosine Kinase 2 Inhibitors" for Virginia Tech:

Yugesh Kharel, Emily A. Morris, Molly D. Congdon, Steven B. Thorpe, Jose L. Tomsig, Webster L. Santos, and Kevin R. Lynch, Sphingosine Kinase 2 Inhibition and Blood Sphingosine 1-Phosphate Levels, *J Pharmacol Exp Ther* October 2015 355:23-31

On the first page of each copy of this article, please add the following:

Reprinted with permission of the American Society for Pharmacology and Experimental Therapeutics. All rights reserved.

In addition, the original copyright line published with the paper must be shown on the copies included with your thesis.

Sincerely yours,

Richard Dodenhoff
