brasier1@vt.edu

Dear Mr. Brasier,

I am writing with editorial comments regarding the manuscript “Photoperiod Response Gene *Ppd-D1* Effects Nitrogen Use Efficiency in Soft Red Winter Wheat” to be published in *Crop Science*. Please refer to the manuscript number **crop-2018-03-0207** in all correspondence.

Shortly after you respond to this letter, you will receive an e-mail with your galley proofs in PDF format, along with the link to the online reprint order form and instructions for proofing. Note that galley proofs cannot be produced until editorial comments have been addressed. An invoice for publication charges will be sent after the galley proofs are produced. Publication charges for *Crop Science* are \$0 for pages 1–7 and \$50 for each page over 7.

Please review the entire manuscript. Your article was lightly edited for grammar and style. Minor edits have not been tracked in this process, but more significant changes have been tracked and/or flagged with comments. Please check that my editorial remarks have not altered the manuscript content incorrectly and make a check for any mistakes remaining in the manuscript.

Please also provide a response to each of the questions listed below and any queries in the comments of the manuscript. Please note that an extensive revision of manuscript content is not acceptable at this point. You may insert responses directly into this letter or compile a separate list of edits, but please do not send a revised manuscript or an edited version of the copyedited reference file without tracking all changes.

1. If you have images that highlight the work presented in your paper, please consider submitting them for consideration as a cover image for this issue of *Crop Science*. When submitting photos, please include a brief descriptive caption (1–2 sentences) for each image, as well as a credit for the photographer. Submitted photos will not be returned unless specifically requested. Also, please be aware that ASA, CSSA, and SSSA reserve the right to publish and republish any images you submit.
2. In addition to listing Society manuscripts in the journals’ tables of content, manuscripts are categorized by subject on our website. Please consult the subjects collection (attached below) and suggest two or three categories where you think your paper would fit.
3. Is the above email correct for sending proofs and for publication in the journal?

4. Would you like your manuscript to be open access (CC BY-NC-ND license: \$1000, CC BY license: \$1500; for more information, see <https://dl.sciencesocieties.org/publications/cs/author-instructions>)?

5. We've received supplemental files with your manuscript. These are the original files submitted with your manuscript and will not be edited or formatted before publication. Please review the files you submitted and, if any changes are required, send new files with your response to the query letter.

NOTE: If any symbols (e.g., equation operators, approximation symbols [~] before numbers, or Greek letters) appear to have been replaced in the manuscript by incorrect symbols, this may be due to font incompatibility between different versions of Word. You can verify that these symbols are correct in the PDF version; this is how they will appear in the proofs.

Please also note that tables may not appear correctly formatted in the Word file. You will have an opportunity to proof the table formatting in the galley proofs. The red coloring of figure and table citations is to mark the citation order for typesetting and will be removed at the proof stage.

Thank you for contributing this article to *Crop Science*, and congratulations on the publication of your manuscript.

Kaitlin Miller
Assistant Editor, *Crop Science*

Subject collections—Alphabetical list

- Administration/philosophy 001
Air permeability, constit. relat. 191
Agribusiness in education 024
Agricultural pesticides 113
Agricultural systems 47
Agroclimatology 1
Agroecology in education 055
Agroforestry, 290
Air pollution 63
Alfalfa 22
Allelopathy 2
Analytical solutions, math solutions 239
Animal science in education 025
Animal waste 93
Aquaponics in education 026
Barley 311
Batch studies, exp. approach. 197
Bermudagrass 312
Best management practices 137
Biofuels 3
Biogeochemical processes 187
Bioinformatics 301
Biology/biotechnology in education 027
Biomass accretion 140
Biometrics 179
Bioremediation and biodegradation 4
Bluegrass 314
Canola 30
Capillary barriers 188
Capillary fringe processes 189
Carbon sequestration 190
Careers 002
Case studies in education 003
Case studies, exp. approach. 198
Cell biology & molecular genetics 5
Chlorinated hydrocarbons, fate & transp. 203
Clover 23
Colloid facilitate transport, solute transp. proc. 264
Colloids, fate & transp. 204
Communications 298
Comparative genomics 302
Contests in education 009
Cotton 19
Coupled flow/transport models 245
Cover crops 283
Crop cytology 6
Crop ecology 7
Crop genetics 8
Crop growth & development 117
Crop models 52
Crop physiology & metabolism 13
Crop quality 309
Crop rotation systems 118
Crop systems 48
Data acquisition and assimilation 297
Data assimilation, heterogeneity 228
Data management 39
Demonstrations in education 010
Diffusion, solute transp. proc. 265
Dispersion, solute transp. proc. 266
Disposal facilities, waste management 278
Distance education 005
Downhole/borehole methods, geo. instr. 219
Dryland cropping systems 16
Dryland soils 124
Dual-porosity/permeability models 246
Ecological risk assessment 40
