Second Floor Balcony

People standing or sitting here may enjoy a 180-degree view of the whole area, shaded from sunlight under the exposed concrete beams with alum. sun-shield plates in between.

Inside View of Second Floor

Detail of Exposed Beam Structure

From sun-shield aluminum plates, skylights to hard roof, the layers with differing degrees of enclosure are clearly expressed based on varied functional needs.

1. Beams with alum. plates provide sun shield to second-floor balcony,
2. Glazed Skylights supply daylight to public area atrium,
3. Hard roof covers second-floor public area and service rooms.
