Blacksburg, VA
The thesis started from the nostalgia for the historic district and the life within it. I don’t agree with the radical method of reforming the historic district at the moment, which is rebuilding the whole district or demolishing it. I tried to find a new way to reform the historic district by keeping its essential and retaining its liveliness, in which way people can maintain their home land.

During the design process, there were movie scenes, kungfu novels, and the living moment from my childhood came to my mind. And I translate those scenes into the spaces in the project through an architectural language.
CONCEPT

The walkway layouts on the roof of the ancient city. People can walk along the rooftop, feel the sky, clouds, wind, and sunshine. Everyone becomes a knight-errant, and they can rattle freely from one rooftop to another. Their sight can go through each house, and let the living moment of habitats come into their eyes.

For people who live on the ground, the ones who walking along the rooftop is mysterious when they appear every now and then. This scene make the ancient city into a world of chivalry, and makes the movie and novel scenes come true.
PROJECT

I set a street at the historic district as the site of my thesis project. The reformative projects are three individual architectures connected by the walkway on the roof. This thesis project is just a sample of the idea. What I imagine is to lay the walkway out to the whole roof of the historic district infinitely.

SECTION OF WALKWAY
STORYBOARD OF PARTICIPANT
In my opinion, architect is not only the designer and constructor of the architecture, but is also the observer and participant of the life. Architecture as a profession endows architects the correlative knowledge and ability to create spaces. However, architects should not be limited to the form and space of the architecture, we should integrate ourselves into human life, and to create more and better lifestyles and experiences. I am always thinking that only when people, animal, plants, sound, light, and more things take part in an architecture, then the architecture would have its soul. Therefore, architect is not only the observer and participant of the life, it is also the creator of the lifestyle.
