

## **Acknowledgements**

Upon finishing this thesis, first and foremost, I would like to present my sincere gratitude to my advisor, Dr. Anbo Wang who gave me the precious opportunity in my life to study in Photonics Lab at Virginia Tech. Without his encouragement, guidance and sincere supports, many things would be different and worse than I expected. Every significant pace I took from Virginia Tech is originating from his profound and selfless guidance and encouragement. In here my best gratitude and wish will be going to him.

I would also like to thank Dr. Russell G. May who gave me a lot of help and good suggestions in my study and research work in Photonics Lab. My thanks also will go to Dr. Ahmad Safaai-Jazi for serving on my committee and for the encouragements and valuable suggestions that I received from him.

My gratitude will also go to all my colleagues and friends at the Photonics Lab, where we share the pleasure and the knowledge. Among them, I would like to thank Russell May, Gary Pickrell, Hai Xiao, Jiangdong Deng, Ming Luo, Wei Huo, Po Zhang, Bing Qi, Yuhong Duan, Yibing Zhang, Wei Peng, Bing Yu, Yan Zhang, Zhengyu Huang, Ming Han and Zhengxuan Xu, for their valuable suggestions and supports. Here special thanks will be presented to Hai who not only gave me lots of selfless help in my work but also many significant encouragement and guidance in my life. In addition I am also extremely grateful to Debbie Collins, who with her patience and thoughtfulness has made the Photonics Lab a place with pleasure.

Finally, I am greatly thankful to my parents and my sister, who raised me with their heart and love and gave me endless encouragement and supports from my childhood to now, and will extend to my future.
