

## **Acknowledgment**

First, I am really thankful to Dr. Charles L. Rutherford for giving me a great opportunity to work in his laboratory. He is really a perfect scientist. Also, he is a perfect role model for me. He always dedicates his time and efficiency in research. Not only, he has taught and trained me how to be a good researcher, but also he has shown me how to consume time efficiently and useful to go to get the expected goal. Furthermore, he is a very understandable and patient professor. He has always tried to understand what my problem is and tried to understand what I have tried to communicate. Not only, he has trained me to be a hard-working student, but also he himself is a very hard-working professor. Most importantly, I will consider him as my greatest advisor forever.

Second, I would like to thank Dr. G. William Claus, Dr. Muriel Lederman and Dr. Asim Esen for having been my committee since I was a graduate student in Master's program. I really appreciate the way they can wait to see me improve although it takes so long. They had been advised me to be successful in experiments and always cheered me up when I had a trouble. Besides, I am very grateful to Dr. Ann Stevens for being my committee. Her kindness and friendliness is so beautiful to me.

I am also indebted to Dr. Reyna L. Favis for her time and skills. Dr. Rutherford and her are the important people who had provided me the experiment's skills when I, who knew nothing, first started to do research in Molecular Biology. She is the one who always understands my learning curve. She had tried to fix my problems, especially English problem.

Besides, I am really grateful to all Thai people to provide me a scholarship to study in the US. Although they do not know what I will learn and how much I can learn abroad, they just hope one day I can do something useful for them and the country. Also, I would like to thank Virginia Tech and the United States of America for giving me a great and wonderful opportunity to study here.

Finally, I would like to thank my family (Mr. Wanderm, Mrs. Pa-ern and Mr. Pichet Chanchao) for all kinds of supports. I know my life will not be easy and enjoyable without them.

## Table of Contents

Title Page.....	i
Abstract.....	ii
Acknowledgment.....	iii
Table of Contents.....	iv
List of Figures.....	vi
List of Table.....	viii

## Table of Contents

1. Introduction.....	1
2. Materials and Methods.....	5
2.1. <i>Dictyostelium</i> cell maintenance.....	5
2.2. Large scale cell culture and harvesting cells at the culmination stage.....	5
2.3. Equilibrating resins to be used in protein purification.....	6
2.4. Enzyme activity assay.....	6
2.5. Alkaline phosphatase purification.....	7
2.6. Non-denaturing protein gels.....	7
2.7. Activity stain after non-denaturing gel electrophoresis.....	8
2.8. Coomassie blue stain.....	8
2.9. Silver staining.....	8
2.10. Alkaline phosphatase activity assay on gel slices.....	8
2.11. Trichloro acetic acid precipitation of protein.....	8
2.12. Electroblothing of purified protein.....	9
2.13. Amido black staining.....	9
2.14. Enzyme activity of alkaline phosphatase transferred to a membrane.....	9
2.15. Preparation of protein samples for sequencing.....	9
2.16. Genomic DNA isolation for Southern blotting.....	10
2.17. Genomic DNA isolation for PCR.....	10
2.18. Assay of DNA levels.....	11
2.18.1. Ethidium bromide fluorescent quantitation of the amount of DNA.....	11
2.18.2. Agarose gel electrophoresis assay .....	11
2.19. Southern analysis with radioactive labeling probe.....	11
2.20. Capillary blotting.....	12
2.21. Vacuum blotting.....	12
2.22. Random priming of a probe with $\alpha$ - <sup>32</sup> P dATP.....	12
2.23. 5'-end labeling of a probe with $\gamma$ - <sup>32</sup> P dATP.....	13
2.24. Southern analysis with non-radioactive labeling probe.....	13
2.25. Optimization of MgCl <sub>2</sub> concentration and temperature for PCR.....	13
2.26. Preparation of PCR template DNA by the colony lysis procedure.....	14
2.27. RNA isolation.....	14
2.28. Reverse Transcriptase-PCR (RT-PCR).....	14

2.29.	T-tail pBlueScript Vector.....	15
2.30.	Test of self-ligation of cut vector.....	15
2.31.	Transformation of plasmid into bacterial host cells.....	15
2.32.	Electrocompetent cells.....	16
2.33.	Minipreps of plasmid DNA.....	16
2.34.	Supercoiled sequencing.....	17
2.35.	Preparation of the DNA for a sequencing gel.....	18
2.36.	Northern analysis (without formamide solution).....	18
2.37.	Northern analysis (with formamide solution).....	19
2.38.	Reprobing a nylon membrane (northern blot membrane).....	19
2.39.	Knock out mutagenesis.....	19
2.40.	AX3K transformation with the blasticidin knockout construct.....	20
3.	Results.....	22
3.1.	Purification of 5NU.....	22
3.2.	Attempts to concentrate the active 300SW fractions and perform preparative SDS PAGE.....	23
3.3.	Preparative SDS PAGE and protein sequence analysis.....	24
3.4.	Southern blot analysis with phos B3 and C3 oligonucleotides.....	24
3.5.	Temporal expression of 5NU as measure by RT-PCR.....	25
3.6.	PCR amplification of genomic DNA with the degenerate primers.....	25
3.7.	Clones of 5NU and AP.....	26
3.8.	Expression of 5NU and AP during <i>Dictyostelium</i> development.....	27
3.9.	Gene disruption of the 5NU with blasticidin resistant gene.....	29
3.10.	Transformation of disrupted 5NU into the <i>Dictyostelium</i> genome.....	30
3.11.	Gene disruption of the AP with blasticidin resistant gene .....	31
4.	Discussion.....	92
4.1.	Purification of 5NU and AP.....	92
4.2.	Developmental regulation of 5NU as determined by RT-PCR.....	93
4.3.	Separate genes encode 5NU and “classical” AP.....	93
4.4.	The expression of the 5NU and AP during development of <i>Dictyostelium</i> .....	94
4.5.	Similarity of 5NU to a protein involved in cell-cell interaction during development in <i>Dictyostelium</i> .....	95
4.6.	Attempts at gene disruption of the 5NU and AP genes.....	95
5.	Summary.....	97
6.	References.....	99
