

## **Dedication**

This work is dedicated to my parents Thomas F. and Phyllis J. Gibson  
All I have and will accomplish are only possible due to their love and sacrifices

## Acknowledgement

First and foremost I would like to thank my advisor Dr. Richey M. Davis. Without his patient guidance, teaching, insightful ideas and long hours of work, this dissertation could not have been completed. I can not adequately express my thanks for his help and interest in seeing me obtain not only my degree, but succeed in all my endeavors. For all his help and mentoring, I am very grateful.

I want to thank Dr. John Dillard, the Director, for his support both through CASS and as a member of my committee. I have rarely encountered such a dynamic organization and people whether in academia or industry. I thank you for your help and look forward to a continuing association as I move into industry.

I am very thankful to Dr. Judy Riffle and Dr. Ray Yin who both provided materials and guidance on the chemistry of the polymers. I truly enjoyed the Polymer Chemistry course that Dr. Riffle and Dr. McGrath co-taught. Dr. Eva Marand and Dr. David Cox who as committee members and Chemical Engineering Faculty provided guidance and friendship throughout my years at Tech. Sitting in on her Thermo class got me through my qualifying exam 10 years after Tony McHugh first taught me. Dr. Roe-Hoan Yoon who taught an excellent surface chemistry course in the Mining Engineering Department, as well as providing insightful information on metal oxide surfaces forces due to adsorbed alcohols and surfactants. Thank you for the education and interest. your course gave me the background to tackle my thesis.

I give many thanks to the Center for Adhesive and Sealant Science and the Adhesive and Sealant Council for their financial support of this work. I wish also to thank Katy Hatfield, Kim Mills, Linda Haney, and Tammy Jo Hiner for the great job they did and continue to do for CASS and the students involved in the center. It was great knowing and working with such a nice group of people. I need to thank Dr. Tom Ward, Dr. Jim Wightman, and Dr. David Dillard, also. I was fortunate to have been taught by such

outstanding teachers both in and out of the classroom. Also, the students of CASS, thanks for the memories, especially Kermit Kwan, Dave Porter, Mark Muggli, Ojin Kwon, Maggie Bump and Rob Jensen. We had some fun, Chicago, Myrtle Beach, Savannah, and the Greenbrier.

Thank you to Dr. Herve Marand and Dr. Garth Wilkes. You were great teachers and educators. Dr. James M. Caruthers at Purdue, my Masters advisor, and a friend who continues to provide guidance and help as I move through my career.

My lab mates, Norm and Slade, thanks for all the help over the years. The Friday coffees and basketball sessions were a great help toward staying sane. Not to mention the help on a new crib for the last year. Good luck guys, I'm sure you'll be successful where ever you go.

Raj, "Watson," Chris Cornelius, Sean Christian, Suhktej Dhingra, Thomas Xue, Ningling Wang and Todd Bullions. You were my friends from start to finish. When others choose not to invite me, you always did. You accepted me with no strings attached. I am very grateful for your friendship, and will always be there to help if needed.

Robert Young, Mike McCleod, and Phil Kaiser, we never made the playoffs, but darts was a great way to relax. To Art Degener, Paul and Rakesh thanks for a great football season. Mark Abee and Brian Kaushiva, thanks for organizing the intramural teams. All of you made Tech a nicer place to be.

I thank IMAPS and Joe McGonnell for their financial support of this work. It was a pleasant surprise when he dropped in and say hello. I miss my Ablestik friends, especially when the temperature drops below freezing. I was always cheered when Isabel, one of my dearest friends, thought to send off an e-mail full of jokes or just to say hello. Chris Dominic, a very good friend who probably had more to do with my decision to journey to Blacksburg than he realizes. You made this possible. Yana, Aeran, Roli,

and Elena I thank you for staying in touch as the years passed. It was great motivation and very appreciated.

Nick Jacovino and Scott Poole. You said more would happen here than a degree. you were right. We'll see you in a year in Virginia Beach.

Tom and Jeannie, Bill and Angie, and Dan Livingston, the e-mail over the years was something I looked forward to everyday. Brian thanks for the free chiropractic work on a student budget, that was key. You are my oldest friends, and you have supported me throughout. Yes, Tom I will still take classes somewhere, even after this degree. Thanks gang.

Brian and Nancy Love who opened their home to me upon arrival and spent valuable time with me over the last 4 years. I know that tenure is a long and grueling process, but if any two people were meant to teach, it is you. Thanks for the help and friendship.

The most important thanks goes to my family. Sharon, Cathy, Linda, Tom, Mary, Therese, all my nieces and nephews and inlaws Uncle John and our first PhD in 1998 Aunt Camille. You always knew when to call or write at just the right time. Thanks for the encouragement. To Thao Vo, I would never have gotten through this without you Em. Thanks for being there. Finally, to my parents, Thomas F. and Phyllis J. Gibson, I can not begin to thank you for all you have done over the years. Your sacrifices and encouragement have made everything I have done possible. This work is dedicated to you.
