ANNUAL REPORT FORM AND INSTRUCTIONS TO AGENTS

The agent's annual report should be a complete summary of all the work performed during the year. This is the only record that the officials of the Extension Division of the State and the Department have of the agent's activities.

The only means of making such a report is to keep field notes or a field diary of everything that is done each day. It is well to not only keep notes of things actually done, but to make some brief observations of general conditions as found from time to time. Many things which seem of minor importance to the agent may be very valuable to the head offices when asked for detailed information regarding certain localities.

An agent's efficiency and the success of his work is necessarily judged from this office by what is contained in his report. Your district and State agent may know that you are rendering efficient service, but it is absolutely essential to have something on record to show that the work has been done, when outside parties who can not possibly inspect your work desire definite and accurate information in regard to the results that are being accomplished in local territory.

Every agent in the work has been instructed, by circular letter and by the supervising force at agents' meetings, as to the importance of keeping systematic records throughout the year. If this advice has been followed you should have no difficulty in rendering your annual report upon the forms which are herewith attached. These are broad enough to include the activities of the agents in the entire territory covered by the Extension Work in the South. Some of the questions will not apply to your local territory, and these, of course, need not be answered.

In some instances you will observe that the same form is used for several crops. Be sure to use separate sheets for each crop named under the heading. For example, take the sheet headed "Small Grains", under which are included oats, wheat, barley, and rye. In this case all the demonstrations in oats should be included on one sheet, all the demonstrations in rye on another, and so on for all the crops included under this heading.

Be sure to answer the questions in the order in which they are asked, and see that you give the information called for. If this is done, all the reports will be uniform when they are sent in to the State agent's office, and in like manner the State agent's reports will be uniform when sent to the Director's office in the State and then to the Washington Office.

It should be distinctly understood that these forms are only to summarize the statistical part of the report.

A separate narrative report should accompany this statistical summary.

EXHIBIT 11. INFORMATION FOR DISTRICT AGENTS

In collecting the replies to the questions of a personal nature, the agent will have to depend on his tact and good judgment in approaching the farmer. A few, no doubt, will be averse to furnishing you with some of the information asked for, but if reliable data could be collected with reference to these points, it would enable the Department to get a rather definite idea as to the beneficial effects of the demonstration work in your section.

The forms that we are sending out include the following crops, groups of crops, and other miscellaneous work of the county agent:

CROPS:

Corn
Cotton
Tobacco
Small grain
Hay and forage
Cover crops
Summer legumes
Potatoes (Irish and Sweet)
Truck crops and gardens
Sugar cane
Orchards

LIVE STOCK:

Horses
Dairy cattle
Beef cattle
Hogs
Sheep and goats
Poultry
Live stock diseases and pests

OTHER WORK:

Fertilisers
Farm manures
Silos
Dipping vats
Seed selection
Lime
Rotations
Pastures
Organizations
Farm buildings
Drainage
Farm machinery and tools
Clearing land, stumps, etc.
Timber and wood lots
Miscellaneous demonstration work
Effect of demonstration work on community, and human interest features
Successful undertakings
Work with negroes
Boys' club work

If there is anything in any of these forms that is not thoroughly understood discuss the matter with your district or State agent or write to this office for a more specific explanation.

MAP OF COUNTY

SHOWING TYPE AND DISTRIBUTION OF WORK

The following sheet is to be used for an outline map of your county, to show the kinds and distribution of your work. Maps larger in size than this sheet may be used if desired. In some states, suitable maps, showing topography, railroads, rivers, election districts, etc., are obtainable from the Office of the State Geological Survey. It is suggested that a copy of the map furnished with your report be kept for your own office record, unless you already have one answering the same purpose.

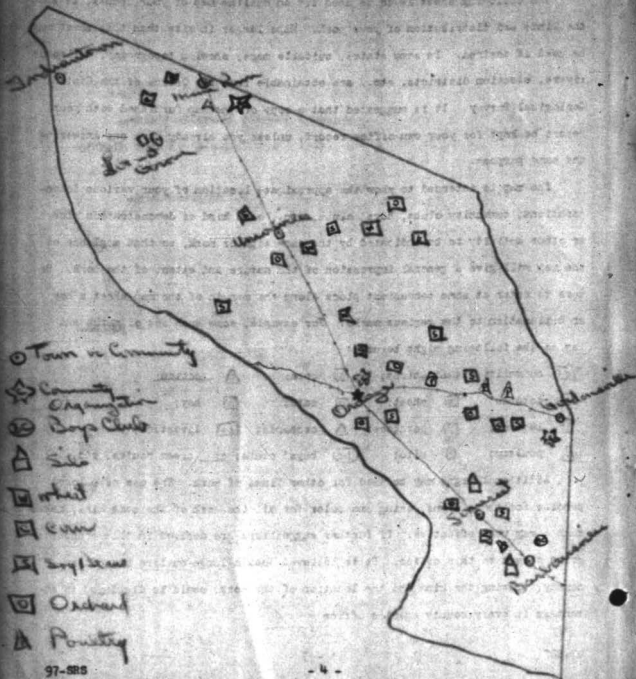

The map is intended to show the approximate location of your various demonstrations, community clubs, boys' clubs, etc., each kind of demonstration club, or other activity to be indicated by the same sign or mark, so that a glance at the map will give a general impression of the nature and extent of the work. Be sure to enter at some convenient place along the margin of the map sheet a key or explanation to the various marks. For example, some such set of marks and key as the following might be used:

 community organizations;	 corn;	 cotton;	
 tobacco;	 wheat;	 oats;	 hay;
 legumes;	 potatoes;	 orchards;	 livestock;
 poultry;	 silo;	 boys' clubs;	 cream routes, etc.

Additional signs may be used for other lines of work. The use of colored pencils for these signs, using one color for all the work of the same kind, makes such a map very effective. If further suggestions are desired in this connection write direct to this office. It is believed that a large outline map of the county, showing the kind and the location of the work, could be displayed to advantage in every county agent's office.

COUNTY ORGANIZATIONS

EDWARD V. HANDELY

COLUMBIAVILLE, INDIANA

1. Is there a central county committee supporting your work? Yes
2. If so, what is it called? Grange County Farmers Union
3. Who constitute its membership? The Best Farmers of the County
4. How is membership selected or appointed? By Application
5. Does this committee help you make a county plan of work? Yes

How long has this county organization been in existence? 9 years

6. Number of communities in your county 9
7. How many community farmers' clubs have you assisted in organizing this year? _____
Total membership _____
8. How many community farmers' clubs have you in your county? 4
Total membership 988
9. How many community farmers' clubs have ceased to exist during the year? _____
(Give reason) _____
10. How many of these clubs are organized so as to include the farmer's wife, children, and others, in their membership? _____

Space for agent's stamp

COUNTY ORGANIZATIONS (Continued)

EDWARD V. BREEDEN

GORDONVILLE, VIRGINIA

11. How have these clubs been helpful to the farmer and his family? (Use extra pages if necessary)

They have given to him the only organized contact with his fellowmen other than the church. Have brought him better ideas of farm management, speakers on timely subjects and have given him a business organization which seeks to buy and sell his ~~xxxxxx~~ products at reasonable profits and commissions. When a community feels that it is not getting proper cream prices etc. etc. it is through these organizations that he gets an opportunity to protest. As one individual he is almost nothing as an organization man he holds ability to take mass action in regard to his different problems. They give him a regular place to come in contact with his County Agent when the subject he wishes to discuss doesn't seem to justify correspondence. They make life worth

12. Are these community farmers' clubs dependent on the county agent while for their existence and the continuation of their efforts? no.
13. Does each club have a community plan or program of work? no.
(Attach a copy of such plans for the past year)

Space for agent's stamp

COOPERATIVE BUYING
AND SELLING ORGANIZATIONS

EDWARD V BRADEN,
GORDONVILLE, VIRGINIA

1. How many of your farmers' organizations buy and sell cooperatively? 4
2. State the quantity and value of each farm necessity or product bought or sold cooperatively by these organizations and the approximate saving to the farmer. Make a separate list of purchases and likewise one for sales, and indicate which are purchases and which sales. Report all livestock in carload lots, keeping the different kinds of livestock separate, for example, cars cattle; cars hogs, etc. Report all grains and potatoes in bushels and carloads, making a separate report on each kind of grain, i. e., 10 carloads, or 5000 bushels of corn. Report all seed in bushels, all fertilizer and lime in tons, and wool in pounds. In the column headed "value", report the amount at which the commodity was actually sold, or for which it was bought. If more commodities have been bought or sold than can be listed on this form, use an additional sheet. A full report on this subject is urged.

Article	Quantity	Value	Saving
*Bought	Cars B., lbs. or tons		
Fertilizers	55 1100	\$ 24,200	\$ 1100.00
Seeds of all kinds	40	25,000	2000.00
Cotton Seed meal	10	7,500	250.00
Butt.	5	500	75.00
*Other products. seeds array shelf goods		75,000	4000.00
*Sold		17,500	725
5000 bushels of wheat			500.00
<u>This sale of wheat made a direct difference of 10¢ per bushel for all wheat sold locally after farmers started shipping.</u>			

3. Have you attempted to keep a bulletin board in your office, listing things for sale and things wanted?
No, as I am on road all time I find it best to keep such details on loose leaf book in pocket.
4. Have you used the market news service of the U. S. Department of Agriculture or your State market news service?
yes To some extent.

| 20. Estimated total increased value of all crops due to the use of certified seed | |

(For additional remarks use reverse side of this sheet)

Seed Certification.

The seed certification program has made a decided appeal to the best of my farmers. It is one of the few programs which farmers have embraced without definite effort by the agent. Farmers have applied to me for information with regard to our plans of seed certification and have then become staunch advocates of this valuable method of seed production.

I have had applications for bushels and bushels of seed oats and wheat which could not be filled and the men are only waiting for another crop to mature to become certified seed producers and users.

Wheat.

It is very gratifying to the local Agent to see reversal of form in persons who have been either like warm or actually antagonistic to the Extension work in the County. In connection with the above crop a nice happening illustrating the point was presented when the local miller came to me of his own accord and asked that I interest myself in the matter of controlling the advent of stinking smut in the lower end of my county. This Miller had actively fought the former agent and had actually led an attack on the work four years ago. The reason being that the Agent stood for Farmer Organizations and did everything to forward the organization move and the Miller saw an effort to bring in a lively competition in the feed and seed business.

The County Agent and the Miller are now working together in an effort to control this very destructive disease.

Much interest is being centered on the V. F. I. # 181 wheat introduced by the County Agent this fall, cooperating with the Va. Crop Imp. Assn.

Oats. WYATT LEAVE

It has been very difficult to get a start in the proper in production of Oats in my County, owing to the rush of fall work and the desire to put oats on the main crop corn stubble. This old practice necessitates the too late seeding of oats for this section and I am getting some results in a rotation in which soy beans for hay will precede the seeding of oats, particularly for our Dairymen. A number of them are trying this practice and are much pleased with the program.

V. F. I. # 1 Oats came in for much favorable comment by virtue of a crop in the lower end of the County. The grower was offered \$2.50 per bushel for the oats for seed but was pledged to sell through the Crop Assn to be divided as widely as possible. Only 25 bushels were available from this demonstration and it was placed on 6 farms. for work next year.

Alfalfa.

Owing to an exceptionally good season the growing of alfalfa has gotten a good head off this year. In one field of 30 acres a demonstrator cut four of the finest crops I have ever seen it is estimated that he cut at least 2 1/2 tons of cured hay. The field yielded four very tall cuttings and the uniformity of the cuttings was such that the four samples selected to go in the County Exhibit at the State Fair were exactly the same length. Our Dairymen are almost without exception going in for this crop.

Red. Clover.

STATE OF MISSISSIPPI

Being to the widespread distribution of powdery mildew which covered my entire county and was accompanied with a bad infection of lesser clover weevil, red clover did not turn out well on demonstration or any other acres. The growing of clover got a more severe set back from this cause than has ever happened before and many of our farmers are seeding alosike this year instead of red fearing a repetition of the fungous trouble.

Grass Mixture For Hay.

This mixture was brought in to the County by the first County Agent several years ago and is recognized today as one of the outstanding successes of Extension work in the County. It can be seen in every community of the County and if traced to the origin of the idea for seeding it will all go back to Extension work. So, program of hay making has done as much to fill the hay mow in the County and as one rides over the County he will hear such remarks, "That field is sowed to Breckens mixture or to Kirbys mixture; the names of the present and former County Agents."

Cow Peas.

Owing to the success of the Soy Bean seed production campaign I am rather advising against the sowing of cow peas and the substitution of Soy beans in their stead. Not that I think the loss of Cow peas but we have to buy the seed of this legume if we would use it and we cannot grow them for seed owing to the labor involved, but we can grow Soy bean seed as they can be harvested with machines. Here I to have Cow pea demonstrations it would naturally bring up comparative results which from 1 year to year are in no way reliable and are apt to hinder my Soy Bean Program.

See Soy Beans.

Soy Beans for Seed.

Probably nothing since Extension work entered the county is having so widespread an effect as the Soy Bean Seed Production Campaign put on by the present Agent. This Program has back of it the machine harvest of the beans from the growing plant and two of the machines were introduced into the county as a direct result of the activity of the County Agent.

One of these machines harvested over 500 bushels of seed and this was done on ten farms by ten different men working the machine and without former experience.

At every meeting held in the County since the promotion of the project the subject has come up in one way or another and this year it is estimated that we have produced something over 2000 bushels of seed. And this in a county which has always bought its entire seed requirement of both beans and peas.

At this time it is impossible to accurately give the actual harvest as the machines leave much trash in the beans and this has not been fanned out on most farms. The trash is left with the beans to aeriate them to keep from having them heat as a result of being harvested with a certain moisture content.

qg This campaign went over with a bang and the farmers of the County are solidly back of the move to get away from spending thousands of dollars every spring for pea and bean seed.

Orchards.

Fruit is the branch of the work I seem best adapted for in County Agent work and I presume the handling of my own ten acre orchard helps in putting across my fruit work.

Owing to the shortage of funds on the farms I have been able to get very few men to take up the planting of young orchards during this year but many of them are only waiting the time when they can see the cash in order to get started with this orchard planting.

During the early fall as Winesaps began to color, I was called aside by a farmer and orchard owner in the Unionville neighborhood to ask me about the spray circles I had proposed for that section. He said that as a result of the work being done in the Clark Orchard this year that he believed we could get some action on our proposed spray circle. Cooperating with him we called a meeting and as a result five came and all signified a willingness to take part in a circle to be formed this winter.

The Clark orchard to which he referred brought in more money this year than had been realized for a total of the last seven years.

| 16. Report on reverse side of this sheet any work done on poultry diseases. | _____ | _____ |
| 17. Number of communities in which poultry demonstrations were conducted | _____ | 2 |

As long as there was a woman agent in our County I let her do all of the poultry work in fact turned over such work to her when it came my way, but after the passing of her office I was practically forced to take up the work. Nothing in the work has apparently netted the good results obtained in my poultry work and has created such pleasant feeling for the agent.

I am giving feed rations, advising about stock, buildings, etc etc from week to week and during last winter the Banks of the County Seat furnished the money to effect an egg trading scheme by which we were able to trade 8000 pure bred eggs to the farmers in return for common farm eggs.

Many birds resulting from the hatching of these eggs were exhibited at the County Fair and it was gratifying to have the Judge state that only 5 out of 285 birds in the show could have been disqualified in any company.

LIVE STOCK DISEASES AND PESTS

1. How many demonstrations have been conducted through your influence in treating or testing livestock for the control of the following:

		Demon- strations	* Animals treated
CATTLE	(Blackleg - - - - -)		
	(Anthrax or charbon - - - - -)		
	(Digestive and other troubles - - - - -)		
	(Tuberculosis - - - - -)		
	(Ticks - - - - -)		
	(Lice - - - - -)		
EGGS	(Cholera (single treatment) - - - - -)	2	2
	(Cholera (simultaneous treatment) - - - - -)		
	(Digestive and other troubles - - - - -)		
	(Worms - - - - -)		
	(Lice - - - - -)		
	(Wange - - - - -)		
SHEEP	(Stomach worms - - - - -)		
	(Digestive and other troubles - - - - -)		
	(Grubs - - - - -)		
	(Scab - - - - -)		
	(Ticks - - - - -)		
HORSES	(Spinal meningitis - - - - -)		
	(Digestive ailments - - - - -)		
	(Anthrax or charbon - - - - -)		
	(Distemper - - - - -)		
	(Accidents - - - - -)		
	(Other troubles - - - - -)		

2. State in how many of the above demonstrations you actually treated livestock to demonstrate the method of treatment and the number of animals actually treated by you:

	Demon- strations	Animals
CATTLE, for Blackleg - - - - -		
CATTLE, for Tuberculosis - - - - -		
CATTLE, for Anthrax or charbon - - - - -		
EGGS, for Cholera - - - - -	1	1
HORSES, for Anthrax or charbon - - - - -		

3. Have you instruments for such demonstrations? yes
4. Report results of treatments and of campaigns for eradication or control of diseases or pests under "Remarks".

*Include all animals treated through your influence.

FERTILIZERS

EDWARD V. BREEDEN,
County Agent,
GORDONSVILLE, VIRGINIA.

1. How many farmers consulted you regarding the use of fertilizers? 25
2. How many fertilizer demonstrations are the farmers conducting with you? 2
3. Total acreage in these demonstrations 27
4. How much fertilizer used on such demonstrations? (tons) 5
5. How many communities have you influenced to buy fertilizers cooperatively? 1
6. Quantity bought cooperatively (tons) 1100
7. Value of fertilizer bought cooperatively (actual price paid by cooperative purchase) \$ 24,200.00
8. Total amount saved by cooperative purchases \$ 3,100.00
9. Number of farmers home-mixing fertilizer on your advice 22
10. Estimated number of tons home-mixed 236
11. Estimated saving to farmers (per ton) \$ 2.00
12. Number of communities in which fertilizer demonstrations were conducted 2

It is almost impossible to estimate the saving to the Farmers in the cooperative purchases as they have so long bought their own fertilizer that they have practically cut our competition from dealers. I figure above \$1.00 per ton. If coops were removed today this would immediately go up to \$2.00 and I think that conservative.

| 2. Number of demonstrators reporting | _____ | 0 |
| 3. Total number of acres in lime demonstrations | _____ | 180 |
| 4. How many farms, other than demonstrators, used lime or limestone this year due to your influence? | _____ | 40 |
| 5. Quantity of burned lime or limestone used | est. (tons) | 4000 |
| 6. Total number of acres treated this year | est. | 8000 |
| 7. Number of local sources of lime developed | _____ | 1 |
| 8. Number of lime crushers installed as a result of your work | _____ | |
| 9. Number of lime kilns built as a result of your work | _____ | |
| 10. Number of lime sheds constructed as a result of your work | _____ | |
| 11. Number of carloads shipped into your county | _____ | 115 |
| 12. Number of farms on which soil was tested for acidity | _____ | |
| 13. Number of communities in which lime demonstrations were conducted | _____ | 2 |

I don't know that I should list the 12 farms as demonstrators as we really do not need demonstrations in this county to get the farmer to use lime. The use of lime is only limited by the ability of the farmer to buy and handle the product. So many farmers use lime regularly that they constitute a standing demonstration of the practice.

To illustrate the general use of lime, I was at a Sale in Sept. one man said to me I wish you could swing a car of Sate lime so that I can get 10 tons. I replied that I believed I could make up a car right in that crowd which I did in 20 minutes. In fact I got orders for more than an hour and then had to make up orders for another which was done the next day by phone without trouble. Cooperation with a farmer in the Unionville section of the county we are opening up some limestone which is amallising only 8% less carbonate than State Rock. This should be a great help to people in that community.

SUCCESSFUL UNDERTAKINGS

EDWARD V. BREDEN,

County Agent

CARDONVILLE, ILL. ILLINOIS

Each county agent will be expected to report three (3) important pieces of extension work attempted and successfully accomplished by him during the year. Details of your plan, method of procedure, and results, together with any other interesting facts and observations concerning each piece of work, should be included.

This sheet and as many additional sheets as are necessary should be used for this purpose.

Soybean Seed Production Campaign.

Feeling that the production of soy bean seed would stimulate the idea of soil improvement by virtue of the farmers having legume seed on their own farms instead of having to spend cash to get them. And having realized that a binder harvest and extra threshing season was a handicap in the program of production, I investigated the field of harvesters which harvest and thresh beans at one operation and settled on the best make for the purpose, then got two cooperators to agree to invest in two of these machines with the agreement that they could be used on demonstration acres. As a result of this move and the intensive campaign for seed production it is estimated that 2000 bushels of Va. Soy Bean Seed have been produced this year and the machines did splendid work. One machine harvester over 500 bushels on ten separate farms and the other worked on three farms. All of the farmers seeing these machines work are planning acreages of beans for seed next year. To show how this program works out. One of my last year demonstrators who sold beans this year feeling that he had his seed and a tractor, saved enough seed to not only plant his seed acreage but enough to seed every acre of his small grain land after harvest. He stated that he would never have bought seed to do this seeding. He didn't mind the work but the expense (cash) would have prevented the splendid practice. More legume hay will be seeded as a result and if the seed get cheap I figure to start on the proposal of plowing under some beans for soil improvement. If my farmers have to pay from \$2.00 to \$3.00 per bu for pea or bean seed it is folly for me to propose plowing under a crop which has cost as much. They simply would'nt hear of it. Having their seed the matter seems different to them even if they could get the high price they would have to pay.

OVER.

Apples.

Coupled up with my desire to make Orange County a recognized Winneap Apple County (Commercially) I endeavored last year to start a spray circle at Unionville, a section of my county which has'nt a commercial orchard. The people being xxxxx unused to spraying and a local happening to prevent, the matter fell through, but I held to the idea and figured to demonstrate so perfectly in a demonstration orchard situated right on the main road of that section that they would be obliged to give the matter notice. Here is what happened. The fruit in the demonstration orchard looked so good and the orchard had so few windfalls that the owner and I began to get remarks directly and indirectly about the project. He has made more cash money this year out of the orchard than he has taken in in the last ten years and has had his first real commercial apples to harvest that he has had for the same length of time.

During the month of August one of the men with whom I had planned to work came to me and said what about that spray circle I think the time is ripe to open up the matter again. We called a meeting which was held in this orchard and the people of the community came and were convinced and asked that I bring the matter up again this winter and organize the spray circle. This section has some splendid old trees which to my mind is evidence that the section is suitable for fruit production and when all other sections fail in apples due to frost, this section usually escapes owing to the topography of the country. I consider this feat, convincing this community almost against its will one of the best strokes of work done this year as the possibilities for orchard development there are unlimited.

Poultry.

Prior to this year I had done little or no work in poultry as we had an efficient Home Dem Agent to whom I turned over all such work as came to me. The Home Dem. work was discontinued in this county for local reasons and I had to give it some attention. Not being much of a poultryman myself I had to attend culling schools and read and learn from books, but the results have justified the effort. I enrolled five flocks in the Va. Farm Flock laying contest and have had about the best R. I. Red. results of any flock in the State and a White Leghorn flock has been up in the first ten for months. In addition I have held 18 culling demonstrations where I have put the idea across to from 5 to 12 persons at each demonstration. At these demonstrations I have also gone into the matter of feeding for egg production and the banks of the community recognizing the value of the work gave me enough money to trade 2000 pure bred eggs to farmers for their grade eggs from the farms. These eggs produced birds that we won at our county fair against the best of the County and the Judge at the fair remarked on the high quality of the birds of the Orange Fair. Requests are coming in weekly for instructions with regard to winter production and the poultry part of my work and its advance from nothing seems to me to take place as one of the three best things done during the current year.

BOYS' CLUB WORK

Furnish at least three human interest stories, with pictures if possible. Use separate sheet if necessary.

Also furnish the name and address of the club member in each crop or animal demonstration who made the best record for the year, and a statement of the record to include, variety of seed planted, yield per acre, cost, net profit, value of prizes won, and for livestock the number of animals involved, original and final values of the same, net profit, and value of prizes won.

One of my boys came to me during the summer and said he wanted my advice about his summer activities. Said, he wanted to prepare for college but still had two years to go in the high school. He said he came to me because he felt that Club work had given him the opportunity to go forward and he didn't want to stop at what the local community offered. Said he wanted to amount to something "in the world out yonder". This boy started in as an ordinary country boy, no better no worse apparently than the average. Club work gave him his first vision and he has been not only to Tri-State encampments but to another State's short course and rubbed elbows with the brightest of his fellows. Nothing can stop this fellow now as he has "seen outside". Club work did it and he realizes and appreciates the fact as evidence of what he tells others about ~~the~~ his County Agent and the work he has meant to him.

I have recently received a letter for the father of one of my ex club boys telling me that Club work had been an inspiration to his son and that this boy was now making good at the University of Virginia. He said Sam had so often spoken of me that he wanted to meet me and talk things over. As a result of this meeting the father went to Blacksburg to the Farmers institute, started an ear to row test of corn, which incidentally was the original seed which had been furnished to Sam when he started the work. In this case Club work reached on the whole family.

During the fall I was travelling through the Barboursville section of my county and was on the farm of a childless man who showed me with some pride his fine Duroc hogs. He said in the course of his conversation. This community certainly has you to thank for the Club work which stocked this entire county with better hogs. A Duroc club in that community has changed the whole section and now red hogs are to be found on almost every farm as a direct result of the breeder stock put on sale by the boys of the Pig Club of that section. Thus club work was not only helping the boys but the whole community participated.
