

Insect Identification Laboratory Annual Report – 2009

Eric R. Day

Douglas G. Pfeiffer

Gail L. Senatore

Department of Entomology

College of Agriculture and Life Sciences

Virginia Cooperative Extension

Virginia Polytechnic Institute and State University

TABLE OF CONTENTS

- I. Introduction
- II. Insect Surveys
- III. Collaborators
- IV. Total Number of Specimens Received
- V. Specimens Received by Month and Commodity Group
- VI. Arthropods Received by Month
- VII. Arthropods Received by Host Plant
- VIII. Source of Insects by County
- IX. Sample Source
- X. Client Groups

INTRODUCTION

A total of 1182 requests were received in 2009. This report summarizes the activity of the Insect Identification Laboratory at Virginia Tech for 2009. The laboratory is located in 205A Price Hall. It is managed by Eric Day, Lab Manager, and Doug Pfeiffer, Extension Entomologist, Department of Entomology. David Owen, Luke Harris, Charlotte Oliver, and Gail Senatore also worked in the Lab in 2009.

Of the samples received in 2009, 98% of the samples, 1154 out of 1182, requested control recommendations.

Also from the samples received in 2009, 21% of the samples, 244 out of 1182, were forwarded from the Plant Disease Clinic, managed by Mary Ann Hansen and Elizabeth Bush. The remaining 77% were sent directly.

Specimens are identified and recorded in the lab, then if necessary sent for control recommendations and additional comments from Extension Entomologists who handle particular commodity groups. All specimen data are entered into the Insect I.D. Lab computer data base on the Virginia Tech mainframe computer. The data base greatly facilitates sorting and storage of the information. Some of the records were sent via microcomputer to the Cooperative National Plant Pest Survey and Detection Program (USDA, APHIS, PPQ). We at Virginia Tech acknowledge support provided by this program.

Whenever possible insects are identified to the species level. Common names are used where possible because of their wide recognition. To facilitate mailing insects and insect damaged plant specimens to the lab, local offices of Virginia Cooperative Extension are provided with Insect Identification and Diagnosis Request forms (form 444-113), alcohol vials, and mailing tubes. Specimens also may be brought directly to the lab or mailed to:

INSECT SURVEYS

NARRATIVE FOR PEST SURVEY ACTIVITIES IN 2009.

I. OBJECTIVES

To support the Cooperative Agricultural Pest Survey program of the USDA and to conduct cooperative surveys and improve methods for the detection or measurement of important plant pests and exotic pests. In addition, to input generated survey and detection data into either the state maintained database or the National Agricultural Pest Information System (NAPIS).

II. SURVEY PROGRAM

2009 TRAPPING SURVEY FOR EXOTIC BUPRESTID BEETLES IN VIRGINIA

CURRENT STATUS: Trapping is complete and no exotic Buprestid beetles were found. Project Coordinators: Eric R. Day, VPI&SU. Bernetta Barco, USDA/APHIS/PPQ. Debra Martin, VDACS. Objective: Survey of select oak forests near ports of entry for exotic Buprestid beetles with particular emphasis on *Agrilus biguttatus*. Benefits/Justification: *Agrilus biguttatus* or the Oak Splendor beetle is not known to occur in North America but its introduction could have a huge impact on hardwood production and the nursery and landscape business similar to effect of the Emerald Ash Borer. Materials and Methods: Buprestid beetles were trapped with a tree silhouette trap developed by Jason et al. (2004 ESA Poster). This silhouette trap consists of a strip of pink duct tape coated with a sticky material. This tape was fastened to an upright metal pole. Traps were checked monthly and were covered with a clear plastic covering and returned to

the lab so the beetles could be removed with a non-destructive solvent. Initially specimens will be stored in alcohol but were later transferred to pins. Sites selected were an oak planting or natural setting with 3 or more oak trees (*Quercus* sp.) near a foreign source of wooden shipping material. Survey sites were near warehouses that receive wood crating, pallets, and dunnage from foreign sources, and businesses that receive material in wooden crates. See list below:

Virginia Inland Port	Port of Entry
Alban Bus Depot	Near EAN site
Sully Plantation	Near EAN site & Dulles Int. Airport
Atlantic Landfill	EAN site
Port of Richmond	Port of Entry
Fort Eustis	Port of Entry, near EAN site
Newport News Mar. Term.	Port of Entry
Norfolk Int. Terminal	Port of Entry
Hampton Roads AREC	Experiment Station, near EAN site
Mobjack, Mathews Co.	Nursery

Both types of traps were set up in February and removed in November. Traps were checked and replaced every 4 weeks. Traps were serviced and processed by VPI&SU. Results: All collected buprestids will be screened and no *Agrilus biguttatus* were found. All survey data from the survey will be entered into the NAPIS database. First record for the State and/or County will be entered within 48 hours of confirmation of identification by a qualified identifier. All other required records, both positive and negative, will be entered within two weeks of confirmation. All records were entered into the NAPIS database.

2009 CAPS SURVEY FOR EXOTIC LEPIDOPTERA IN FIELD CROPS. Current Status: TRAPPING IS COMPLETE AND NONE OF THE TRAGET EXOTIC SPECIES WERE FOUND. Project Coordinators: Eric R. Day, VPI&SU (Virginia Tech) OBJECTIVES: Survey using pheromone traps and visual inspection for Silver Y Moth (*Autographa gamma*), Egyptian Cottonworm (*Spodoptera littoralis*), Cotton Leafworm (*Spodoptera litura*), Old World Bollworm (*Helicoverpa armigera*), and soybean pod borer (*Maruca vitrata*). These pests have the potential

to establish and become pests in Virginia and early detection would aid eradication and pest management programs. Materials and Methods: Supplies: Trapping supplies for field surveys: Pheromones and wing type pheromone traps, vial, plastic bags. There were a total 12 counties with one soybean field site each. Counties/Cities (Traps and Sites): Surry, Sussex, Suffolk, Southampton, Essex, Richmond (County of), Westmoreland, King and Queen, King William, and Virginia Beach. Each site had 4 traps for a total of 48 traps. Each site had one 1-C wing trap for each pest species listed above and serviced about every two weeks. Visual survey of 50 random plants in soybean fields will be done each visit, after pod set, to check for soybean pod borer at each site. Sites were set-up between June 27 and August 15. All traps were removed from the field by early October. Screening of the trap samples was done by staff at the Insect Identification Laboratory and by Julieta Brambila, USDA APHIS PPQ and no suspect moths were found. Survey protocol is similar to the 2005 survey in Maryland for the same target pests. All survey data from the survey was entered into the NAPIS database.

FUNNEL TRAP SURVEY FOR EXOTIC LONGHORNED BEETLES AND BARK BEETLES IN VIRGINIA CURRENT STATUS: THE TRAPPING IS COMPLETE AND THE TRAPS HAVE BEEN REMOVED. NO SUSPECT CERAMBYCIDS WERE COLLECTED, IN ADDITION NO IPS TYPOGRAPHUS WERE FOUND. Project Coordinators: Eric R. Day, VPI&SU. Bernetta Barco, USDA/APHIS/PPQ. Debra Martin, VDACS. Objective: Survey of warehouses and port facilities for exotic wood borers with particular emphasis on non-domestic longhorned beetles. In addition to survey "Hot Zone" sites identified by Emergency Action Notification (EAN) for exotic wood boring beetles and Siricids. Benefits/Justification: Current surveys in Virginia, conducted by APHIS and VDACS are looking for *Callidielum rufipenne*, the Cedar longhorned beetle (CLHB) and the Asian longhorned beetle (ALB). CLHB is currently found in North Carolina and Connecticut and a survey is being conducted using cedar logs. ALB is found in both New York and Illinois and a survey using baited funnel traps at selected warehouses is being conducted by VDACS. *Monochamus alternatus* was considered by the Virginia State Survey Committee to be the most dangerous of the listed exotic cerambycids because of Virginia's pine based forestry industry coupled with international cargo ports of entry. Traps will be checked for all exotic beetles that have a potential of establishing in Virginia. This list includes *Anoplophora glabripennis* (the Asian longhorned beetle),

Anoplophora malasiaca, *Callidiellum rufipenne*, *Hesperophanes campestris*, *Monochamus alternatus*, *Pityogenes chalcographus*, *Hylurgops palliatus*, and *Ips typographus*. Materials and Methods: Port sites, warehouses, and storage areas with a foreign source of wooden shipping material were selected for this survey. Survey sites included warehouses that receive wood crating, pallets, and dunnage from foreign sources. Lindgren funnel traps were placed at each site and baited with a commercial lure for bark beetles and longhorned beetles. Each trap was set up with dry collection baskets and a killing agent (Vapona). See below for trap location and dates.

Traps were placed in the following locations:

Atlantic Landfill 3 traps on the border of the facility, EAN site.

Fort Eustis 3 traps in wooded area with dead oaks and pines. Near EAN site, Port of Entry.

Hampton Roads AREC, Experiment Station, near EAN site

Norfolk International Terminal – 6 traps in 2 buildings

Newport News Marine Terminal – 6 traps in 2 buildings

Richmond Deepwater Port – 1 trap in 1 building

Virginia Inland Port – 3 traps on the perimeter of the site

Sully Plantation – 3 traps on the border of the park near 2 EAN sites

Alban Bus Garage – 3 traps on the border of the facility near 2 EAN sites

Mobjack, Mathews Co. – 3 traps near a suspected exotic pest infestation (no exotics found at this site)

Screening of samples was done at VPI&SU and no suspect beetles were submitted to E. Richard Hoebeke for further identification, and all Siricidae wasps were determined to be native insects. All data regarding the target insects of this survey has been uploaded to the NAPIS. Additional non-target insects may be uploaded later. Work Plan: Monitoring agencies: Virginia Polytechnic Institute and State University (VPI&SU), Virginia Dept. of Agriculture and Consumer Services (VDACS). Supplies: 12-unit Lindgren funnel traps, lure, alcohol, vials, and other survey equipment.

II. UNFUNDED SURVEYS

SIREX SURVEY: Setup late June, takedown late fall

Virginia Inland Port Port of Entry

Alban Bus Depot Near EAN site

Sully Plantation Near EAN site & Dulles Int. Airport

Atlantic Landfill EAN site

Port of Richmond Port of Entry

Fort Eustis Port of Entry, near EAN site

Newport News Mar. Term. Port of Entry

Norfolk Int. Terminal Port of Entry

Hampton Roads AREC Experiment Station, near EAN site

No exotic Sirex were found but 4 different native species were collected from several different sites. They were: *Sirex edwardsii*, *Sirex nigricornis*, *Urocerus cressoni*, and *Tremex columba*.

EMERALD ASH BORER SURVEY: Setup May, takedown late fall

Alban Bus Depot Near EAN site

Sully Plantation Near EAN site & Dulles Int. Airport

Atlantic Landfill EAN site

Port of Richmond Port of Entry

Fort Eustis Port of Entry, near EAN site

Hampton Roads AREC Experiment Station, near EAN site

No Emerald ash borers were found in the listed sites, although Emerald ash borer was found by Va Dept. of Forestry and VDACS in other locations in Fairfax County in 2009.

COLLABORATORS

Persons providing identifications and/or control recommendations:

Identifications and control recommendations covering most commodities performed by:

Mr. Eric R. Day, Manager, Insect Identification Laboratory

Timely and valuable identifications and/or control recommendations were also provided by:

Dr. Tom Kuhar	Assistant Professor of Entomology	Vegetable Pests
Dr. Richard D. Fell	Professor of Entomology	Apiculture and Stinging Insects
Dr. Dini Miller	Assistant Professor of Entomology	Structural and Household Insects
Dr. Ames Herbert	Associate Professor of Entomology	Soybeans, Small grains, Peanuts, and cotton
Mr. Steve Hiner	Technical Support Staff	Aquatic Insects and Invertebrates
Dr. Michael Kosztarab	Emeriti Professor of Entomology	Scale Insects
Dr. Theresa Dellinger	Post-Doctoral Staff	Entomology
Dr. Douglas G. Pfeiffer	Professor of Entomology	Fruit and Nuts
Dr. Scott Salom	Associate Professor of Entomology	Forest and Conifer
Dr. Peter Schultz	Station Director, Hampton Roads	Ornamentals
Dr. Paul J. Semtner	Professor of Entomology	Tobacco
Dr. J. Reese Voshell	Professor of Entomology	Aquatic Insects
Dr. Roger Youngman	Associate Professor of Entomology	Corn, Small grains, and Grasses

TOTAL NUMBER OF SPECIMENS RECEIVED

Activities: The following table lists the magnitude of activities and services provided by the Insect Identification Laboratory (IIL) and the faculty and staff associated with it since 1967.

Number of Specimens Identified			
Year	Identifications for Extension Agents and the Public	Identifications from Exotic Pest Surveys, Numbers of Traps Examined	Specimens sent to the Systematic Entomology Laboratory, USDA at Beltsville, Md. *
