

# VIRGINIA CORN PERFORMANCE TRIALS IN 1980

LOCATIONS OF CORN HYBRIDS IN 1980

Research Division, Report 177 Department of Agronomy  
Virginia Polytechnic Institute and State University  
Blacksburg, Virginia 24061, December 1980

Coordinated and Summarized by:

H. S. Aycock, C. O. Perry, D. E. Brann, E. R. Davis, Jr.,  
R. L. Harrison and S. L. Myers - Blacksburg

V.P.I. & S.U. LIBRARY

Contributors at each location include:

G. D. Jones - Orange DECEMBER 1980

H. M. Camper, Jr. - Warsaw BLACKSBURG, VIRGINIA

W. B. Wilkinson & R. R. Wilmouth - Blackstone

John Bryant - Holland

C. W. Wood and C. W. Roane - Wingina

J. E. Dunton, H. E. Hohlt, H. P. Wilson, and R. N. Hoffmaster - Painter

E. R. Scyphers, Jr. and Hugh M. Jones - Smyth County

W. J. Brown, R. S. Weber, and C. L. Adams, Jr. - Loudoun County

The brand names and sources of seed of the commercial hybrids tested in the 1980 Virginia Corn Performance Trials are listed below.

<u>HYBRID OR BRAND NAME</u>	<u>SOURCE OR SEED</u>
ASGROW	Asgrow Seed Co., 7000 Portage Road, Kalamazoo, MI 49001
AUGUSTA	Rawley-Whitt Dairy & Seeds, Rt. 2, Box 26, Mt. Solon, VA 22843
BECK	Beck Hybrids, Atlanta, IN 46031
CLARK	Clark Seed Co., Inc., Kenton, DE 19955
COKER	Coker Pedigreed Seed Co., P.O. Box 340, Hartsville, SC 29950
DEKALB	DeKalb Ag Research, Inc., Sycamore Road, DeKalb, IL 60115
DENNIS	Dennis Hybrids, Box 487, Windfall, Indiana 46706
FUNK'S	Hoffman Seeds, Inc., Landisville, PA 17538
GOLDEN HARVEST	Columbiana Seed Company, Eldred, IL 62027
JACQUES	Jacques Seed Company, 720 St. Croix St., Prescott, WI 54021
KENWORTHY	Kenworthy Seed Co., 240 Lafayette St., Greenfield, OH 45123
LONGEST	G. M. Longest, Box 45, St. Stephens Church, VA 23148
MASTER FARMER	Farmer Seeds, Inc., P.O. Box 10, Carrollton, IL 62016
MCCURDY	McCurdy Seed Company, Freemont, Iowa 52561
MCNAIR	Northrup King Co., P.O. Drawer 889, Laurinburg, NC 28352
MIDSTATES	NJ Crop Improvement Coop. Assoc., Inc., Allentown, NJ 08501
MIGRO-NAPB	Migro-NAPB, P.O. Box 7, Mitchell, IN 47446
MUNCY CHIEF	Muncy Chief Hybrids, Market & High Sts., Muncy, PA 17756
NORTHRUP-KING	Northrup-King Co., P.O. Box 959, Minneapolis, MN 55440
O'S GOLD	O's Gold Seed Co., Ag. Res. Ctr., Box 460 Parkersburg, IA 50665
PAG	PAG Seeds, P.O. Box 9480, Dept. 16, Minneapolis, MN 55440
PENNEY	Maynard G. Penney, Rt. 1, Box 53-C, Bowling Green, VA 22427
PIONEER BRAND	Pioneer Hi-Bred Int., Inc., 1000 W. Jefferson St., Tipton, IN 46072
PRAIRIE STREAM	Prairie Stream Hybrids, Inc., RR 3, Frankfort, IN 46401
SOUTHERN STATES	Southern States Coop., Inc. P.O. 26234, Richmond, VA 23260
TAYLOR-EVANS	Taylor-Evans Seed Co., P.O. Box 68, Tulia, TX 79088
THOMPSON	G. C. Thompson & Son, Rt. 1, Box 10, Eagle Rock, VA 24085
THOR-O-BRED	Thor-O-Bred Seed Company of IL, P.O. Box 1437 Champaign, IL 61820
TODD	Todd Hybrid Corn Co., Inc., Box 158, Burlington, IN 46915
TROJAN	Pfizer Genetics Inc., 3339 W. Cary St., Richmond, VA 23221
USS AGRI-CHEMICALS	USS Agri-Chemicals, P.O. Box 1685, Atlanta, GA 30301
WATSON	Watson Seed Farms, Inc., Box 1099, Rocky Mount, NC 27801
YODER	Yoder Hybrid Corn Co., Box 205, Berlin, OH 44610

Trade and brand names are used only for the purpose of information and Virginia Tech does not guarantee nor warrant the standard of the product, nor does it imply approval of the product to the exclusion of others which may also be suitable.

Virginia Tech does not discriminate against employees, students, or applicants on the basis of race, sex, handicap, age, veteran status, national origin, religion, or political affiliation. Anyone having questions concerning discrimination should contact the Vice President for Administration.

## VIRGINIA CORN PERFORMANCE TRIALS IN 1980

Tests of commercial hybrids were planted at nine locations in Virginia in 1980. Climate conditions were generally good for early growth, however, moisture stresses from pre-flowering through grain filling significantly reduced yields at all locations except Loudoun, Blacksburg and Smyth. Supplemental irrigation at Blackstone prevented yield losses due to extremely dry weather. Because of severe drought stress at Painter, the plot was not harvested. The data reported for Painter are from the 1979 and 1978 tests.

Hybrids entered in the Virginia Corn Performance Trials were primarily those submitted by commercial companies, but a few hybrids of particular interest to professional workers in Virginia were also entered.

The locations at which a hybrid was tested were specified by the entering company. Plots were overplanted by 15 percent and thinned to the desired stand where possible at all locations. The desired populations for the tests were 24,000 plants per acre for the early maturity group and 22,000 for the medium and mid-full maturity groups. All locations had four replications of one row plots. One replication was dropped from the test at Blacksburg because of vandalism and also one replication from the Smyth test was dropped because of a weed problem.

Plots were planted and harvested by hand. Erect plants were recorded just prior to harvest. Ear height was measured to the top ear-bearing node. Yield was adjusted to 15.5% moisture. Relative yield is a percentage of the average yield for the test. A hybrid with a relative yield of 105 was thus 5% more productive than the average of that particular test. A relative yield of 90 was 10% less productive than the average of that particular test.

Below each maturity group yield average, the L.S.D. (.05) is given. This is the number of bushels by which two hybrid yields must be separated to be considered different (statistically). In addition, a plus sign beside the yield or harvest moisture indicates performance significantly above (greater than one standard deviation) the maturity group average. A minus sign indicates performance significantly below (less than one standard deviation) below the group average.

Virus trial - Several companies submitted hybrids for comparison under virus conditions. This test was grown in four replications at Wingina in an area containing virus-infected johnsongrass.

Cooperators, plot sizes, fertilizer applications, cultural practices used, and growing conditions are given as footnotes to the various tables.

\*Average Relative Performance was computed by averaging the relative yields of a hybrid at each location it was entered. The higher the numerical value for average relative performance, the better the hybrid performed. To be listed in this table, a hybrid must have been entered in at least 3 locations in 1980.

Cooperators: J. E. Dunton, H. E. Hohlt, H. P. Wilson and R. N. Hoffmaster. Plot Size: 30' x 3' single-row plots, 4 replications. Planting Date: April 10, 1979. Harvest Date: September 18, 1979. Soil Test: pH-6.4, Ca-Mg; P-M; K-H+. Salt conc ppm - 84. Fertilization: 4-6-79: 500 lbs. 5-10-10/A broadcast, 4-10-79: 350 lbs. 33.5% Ammonium Nitrate/A. Herbicides: 4-11-79 - 1.5 qts. Atrex + 2 qt. Lasso/A post-plant. Growing Conditions: Abundant precipitation during the early growing season with moderate water stress during silking. Conditions were generally good.

Cooperators: W. B. Wilkinson, R. R. Wilmouth, Southern Piedmont Research and CEC Plot Size: 25' x 3' single-row plots, 4 replications Planting Date: April 17, 1980 Harvest Date: September 8-10, 1980 Fertilization: 1100 lbs/A 10-10-10; 250 lbs/A 34% N Ammonium nitrate as sidedress Herbicides: Sutan + Bladex Growing Conditions: Conditions ranked among the hottest, driest growing seasons on record. Six inches of irrigation water reduced, but did not negate the effects of prolonged drought. Early season wire worm and flea beetle infestations reduced stands in some cases.

Cooperators: E. R. Scyphers, Jr. and Hugh M. Jones Plot Size: 25' x 3' single-row plots,  
 4 replications Planting Date: May 5, 1980 Harvest Date: October 9, 1980 Fertilization:  
 5-5-80: 60 lbs muriate of potash, broadcast, 90 lbs/A liquid nitrogen band application;  
 6-16-80: 60 lbs/A liquid nitrogen as sidedress Herbicides: 1.5 lbs/A AAtrex; 1.5 qts/A  
 Lasso applied at planting Growing Conditions: In general SW Virginia had adequate rainfall  
 for corn production. Moderate moisture stress did occur following silking period in early  
 August. One replication was discarded due to a weed problem.

Cooperators: W. J. Brown, R. S. Weber, C. L. Adams, Jr. Plot Size: 30' x 2.5' single-row plots, 4 replications Planting Date: April 24, 1980 Harvest Date: September 30, 1980 Fertilization: 4-24-80; 500 lbs/A 10-10-10, 400 lbs/A 34% N Ammonium nitrate Soil Test: Chester loam and silt loam (this soil is part of a proposed new series, Purcellville silt loam) Plow layer: pH = 6.5; p=H-, K=VH, Ca=H+, Mg=VH, Mn=8.3 ppm, Zn=.75 ppm B2 horizon: pH=5.7, P=H-, K=L, Ca=H+, Mg=VH, Mn=1.4 ppm, Zn=.3 ppm Herbicides: 1.5 lbs/A AAtrex, 1.5 qts/A Lasso Growing Conditions: Some drought stress during early growth period. High water holding capacity of this soil reduced further drought stress during subsequent low rainfall periods. In general, pollination was not affected by high temperatures.

Cooperators: C. W. Wood, C. W. Roane Plot Size: 25' x 3' single-row plots, 4 replications  
 Planting Date: May 2, 1980 Harvest Date: September 25, 1980 Fertilization: 2 tons ground  
 Lime; 300 lbs/A 0-9-27; 160 lbs. actual N/A Herbicides: 2 Tbs/A Aatrex; 3 lbs/A Sutan +  
 8 lbs/A Furadan 10-G Growing Conditions: Moisture was generally adequate during early growth.  
 However, drought stress during silking and grain filling lowered yields. Johnsongrass was  
 chopped from the test when the corn was approximately knee-high. The test was irrigated once  
 after tasseling. This trial was rated for virus disease by Dr. C. W. Roane of the Plant  
 Pathology and Physiology Department at VPI & SU on July 31, 1980.

\*1= no apparent damage; 5=severe damage, 9=dead

\*\*The percent of plants infected with either Maize Chlorotic Dwarf (MCD) or Maize Dwarf Mosaic (MDM) per plot.
