

## Latinos: Aspiring, Applying, & Choosing College Findings from The High School Longitudinal Study of 2009

For this factsheet, *Excelencia* in Education aggregated data on Latino students' educational aspirations, applications to college, and college choices from The High School Longitudinal Study of 2009. This Study is a nationally representative longitudinal study that began with freshmen in 2009 and has followed them through secondary and postsecondary years.

## **College Aspirations**

Latinos' college aspirations increased while in high school. From freshman to junior year, the percentage of Latino students...

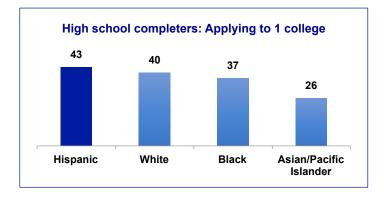

- Who didn't have educational aspirations decreased from 25% to 12%.
- Who aspired to get some college, graduate, or go to graduate/professional education increased from 55% to 65%.<sup>1</sup>

## Applying to College

Latinos were slightly less likely to apply to college compared to other racial/ethnic groups and more likely to apply to only one college. Of high school completers,

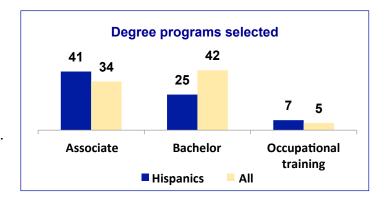

- Almost 75% of Latino and 80% of all applied or enrolled in college four years after starting high school.
- Latinos were more likely to apply to just one college (43%), compared to White (40%), Black (37%), and Asian/Pacific Islander students (26%).<sup>2</sup>

## College Choices

Latinos were significantly more likely to chose an associate degree program over a bachelor or occupational training program. Of high school completers,

- Latinos are more likely to be enrolled in an associate (41%), than a bachelor degree (25%) or occupational training program (7%).
- Of all graduates, 34% were enrolled in an associate program, 42% in a bachelor program, and 5% in an occupational training program.
