Understanding the Challenge: The Worklife of A Principal in an Achieving Urban Elementary School with a Large Number of At-Risk Students

Marilyn Price Lovett

(ABSTRACT)

A number of significant changes have occurred in our public schools in recent years. These changes include shifting federal program priorities, adoption of state curriculum standards, and the implementation of site-based decision-making. These changes come at a time when schools are experiencing significant changes in the ethnic and socioeconomic composition of their student body and when many families are struggling to meet challenges arising from poverty or job requirements. Attention has been given to the impact these changes are having on teachers, parents, and students. Little attention has been given, however, to the impact these changes are having on principals.

The purpose of this study was to increase understanding of a principal's worklife in an achieving urban elementary school with a large number of at-risk students. The study examined one principal's methods of dealing with everyday problems associated with leading in a school that serves children of color and 98% of the students meet low-income criteria (i.e., they qualify for free or reduced-price lunch). Over the past five years, second grade students showed increases in reading beyond those achieved by minority students in the school division. Attendance rates over the past five years show improvement.

Interviews, observations, and the Multifactor Leadership Questionnaire (Bass & Avolio, 1995) were used to collect data. From these data, a case study was written. The report of case study findings describes the worklife of the principal, school characteristics, and school outcomes. Conclusions drawn from the case study indicate that the worklife of the principal has similarities to the worklife of other elementary principals. However, due to school characteristics and external factors elementary

principals serving in urban schools with a large number of at-risk students can expect an escalated level of intensity and demand on a daily basis.

Findings of this study have relevance for urban elementary school principals desiring to increase achievement. Further, findings suggest that urban elementary schools serving a large number of at-risk students can achieve successful outcomes.

ACKNOWLEDGMENTS

Completing this project was one of the most demanding challenges I have ever pursued. This work provided countless opportunities for personal reflection and growth. I would be remiss if a moment was not taken to thank the many individuals who made my vision of this project a reality.

I owe my stamina, love for children, respect for education, and a strong work ethic to the example of my parents. I would also like to thank my dear family whose support and constant encouragement carried me through. Thanks are also extended to Kymber and to Mondo for their patience and sacrifice during the early stages of the process. Quick meals and weekends in the library became a way of life for them. Their interest and faith in what I was doing never ceased.

A number of individuals deserve recognition for the role that they played in helping me with this dissertation. I would like to acknowledge and thank them for their endless support throughout the process. My special gratitude is extended to the co-chairmen of my committee, Dr. Stephen Parson and Robert Richards. Their advice, patience, and unwavering tolerance supported me throughout the process. Dr. David Parks, his patience, advice, desire for excellence, and incredible insight guided me through this endeavor. Dr. Glen Earthman and Dr. Vikki Rehnback always had positive words and expressed faith in my work.

I am also grateful to the principal who opened her heart, mind, and school from the very first day I approached her about the project. The dedicated group of teachers and staff of the school were always willing to be part of the study. Also validated through my work was a belief that educators are high ranking among professionals serving in the human services field. Teachers and administrators I work with were wonderfully supportive. I would like to thank my colleagues and co-workers.

Last, but certainly not least, I would like to thank my many friends – Medina, Pat and Victor, Beverly, Joan – for their continuous spiritual support and inspiration. In addition, I want to recognize the assistance of Jo, Angela, and Jesica who went beyond clerical support and offered energy and always a positive attitude.

DEDICATION

This work is dedicated in loving memory
To my Beloved Mother,
My father, whose quiet abiding love taught me great values
And gave me the gifts of strength and fortitude,
And
Kymber, whose unconditional love, determination, and passion to serve others
Sustain me daily.
I hope, in some small way, this work honors their lives.
