

List of Figures

Figure 2-1 Time delay measurement with a threshold.....	6
Figure 2-2 Gaussian pulses at different SNRs	7
Figure 2-3 Graphical Explanation of the correlation process	9
Figure 2-4 Direct sequence modulation and demodulation	11
Figure 2-5 4-bit pseudorandom code generator	12
Figure 2-6 Delay-lock loop with half-chip-delayed correlator	13
Figure 2-7 Correlation waveforms in delay-lock loop.....	14
Figure 2-8 Example of a Barker code of length 13 with associated matched filter	16
Figure 2-9 Noise distribution	20
Figure 2-10 Probability of detection definition.....	20
Figure 2-11 Estimation approach	25
Figure 2-12 Mean square error behavior versus SNR.....	33
Figure 3-1 RMS error of time measurements using threshold versus SNR with a 300kHz half power Gaussian filter	45
Figure 3-2 RMS error of time measurements using threshold versus SNR with a 300kHz rectangular filter	46
Figure 3-3 Observed mean square measurement errors versus SNR for estimation methods in the TDOA problem.....	47
Figure 3-4 Ambiguity of the time measurement method	48
Figure 4-1 Rms value of the time measurement error using correlation.....	68
Figure 5-1 Threshold and correlation rms error with different noise bandwidth.....	74
Figure 5-2 Rms error for the correlation process with different noise bandwidth.....	76
Figure 5-3 Two AWGN noise with same SNR, but different bandwidths	77
Figure 5-4 Rms measurement error versus SNR referred to same noise bandwidth	78
Figure 5-5 Imperfect time response of a filter to a symmetrical pulse	79
Figure 5-6 Rms error of the time measurement for asymmetrical pulses	82
Figure 5-7 Rms error of the time measurement for symmetrical/asymmetrical pulses	84

Figure 5-8 Inherent error in the location of the center of the pulse for an asymmetrical pulse as compared to a symmetrical pulse	85
Figure 5-9 Time measurement error in the case of pulses having different amplitudes ...	87
Figure 6-1 Illustration of the detection decision in a M/N detection method	92
Figure 6-2 Optimum choice for M versus N in M/N detection.....	95
Figure 6-3 Probability of detection in practical and experimental cases	98
Figure 6-4 Probability of false alarm in practical and experimental cases	99
Figure 6-5 Failed threshold measurement due to noise.....	100
Figure 6-6 Integration loss	102
Figure 6-7 Block-diagram of the combination M/N detection and integration.....	103
Figure 6-8 Comparison of the rms error for integration and averaging methods	108
Figure 7-1 Ambiguity of a threshold time measurement	114
Figure 7-2 Pulse shape	117
Figure 7-3 Non-coherent integration gain.....	119
Figure 7-4 Approximation of the experimental pulse by two Gaussian functions.....	120
Figure 7-5 Spectrum of the recorded noise	121
Figure 7-6 Analyzed probability of detection	122
Figure 7-7 Analyzed probability of false alarm	122
Figure 7-8 Rms time delay error for the first experiment	126
Figure 7-9 Rms time delay error for the second experiment.....	126
Figure 7-10 Simple sequence of M/N detection & Integration.....	130
Figure 7-11 Optimized sequence of M/N detection & Integration	130
Figure 7-12 Block diagram of the designed solution	134
