

## **Acknowledgments**

My acknowledgments start with my committee. Their understanding and support enabled the completion of my thesis. The unfortunate occurrence of the loss of my preliminary work and literature search was made bearable by the allowances of my committee. Dr. Davis, Dr. Moore, and my chairman Dr. Williams, I thank you for your support and willingness to proceed with short notices, I am grateful for all you have done.

In the main departmental office work the most supportive, understanding, and helpful team. I have gained more practical knowledge from these ladies than anywhere else in my academic career. Their work facilitates the work of the department and especially the work of the graduate students. Thank you for all the help that you have provided to me and thank you for all of the insight.

Espen Spangenburg is already a teacher. Whatever course Espen decides to follow he can take great pride in that he has helped every graduate student, some more than others, that were in 340 Wallace during his pursuit of his Ph.D. I would like to thank Espen for the time that he took out of his tight schedule to teach and reteach techniques and topics.

Laboratory work did not come easy for me. Janet Rinehart and Kathy Reynolds were able to remain patient and helpful with the plethora of questions that I had even when they were redundant. Thank you for the time that you two spent educating me.

The Basic Instruction Program (BIP) provided me the opportunity to attain my Master's degree by providing me with an assistantship. Dr. Sebolt was the program coordinator until his untimely death. He was a gruff man, but to those people that he liked

he was a wonderful blunt and honest man. He continues to teach me posthumously through stories of who he was, mostly through Sherry Terry, I thank you Sherry and Don for sharing.

David Wooten earned the responsibility of overseeing the BIP. Upon receiving this position he appointed me to an advisory position. This enabled me to develop skills in program administration and people management. Dave is similar to Dr. Sebolt in that he cares for the program and is in possession of great mettle. I have adopted this trait from Dave and wish to thank him for his guidance and for displaying a true honest responsible man, a rarity indeed.

Sherry Terry deserves more attention than just a brief mention. Sherry, I wish to thank you for everything. That statement may seem trite at first glance, but think about it more. Although everyone always says “Thanks for everything”, in this case it is true. You have done so much not just for me, but for anyone that has ever called upon you both within and outside the department. Thank you for being there for me.

Denise Gorondy is a special woman that has been able to be with me when I would not let anyone else in. I cannot understand why such a special person would want to deal with the stubborn, independent personality I have worked so hard to develop. I guess that I should not question why, but just be thankful that it is so. When the day ends I look forward to seeing her. Her education and work often prevented us from seeing each other at the end of the day, but Henley was there to tide us over until we could see each other. Now we have a gift for Henley to entertain him when we cannot be there for him. Thank you Denise and Henley for your unconditional love and respect, it is duly reciprocated.

Although I consider myself strong and not in need of support, no one is alone. I consider myself special and blessed with the family and friends that I have. Even though my parents are on separate coasts they have been there, through phone and email, for me whenever I need them, even when I haven't recognized the need. I must congratulate them for instilling responsibility and independence in me. I am forever grateful for the morals and ideals that you have provided.

## Table of Contents

<b>ABSTRACT</b>	ii
<b>ACKNOWLEDGEMENTS</b>	iii
<b>LIST OF TABLES</b>	viii
<b>LIST OF FIGURES</b>	ix
<b>I. INTRODUCTION</b>	1
Introduction	2
Statement of Problem	3
Significance of Study	5
Research Hypothesis	5
Delimitations	5
Limitations	6
Basic Assumptions	6
<b>II. LITERATURE REVIEW</b>	7
Introduction	8
Muscle Contraction	9
Mechanisms of Fatigue	10
Glycogen in Fatigue	11
Sarcoplasmic Reticulum and Fatigue	14
Glycogen and Sarcoplasmic Reticulum	16
Summary and Conclusions	18
<b>III. EXPERIMENTAL DESIGN AND METHODOLOGY</b>	21
Experimental Design	22
Animals	22
Exercise Protocol	23
Tissue Harvesting and SR Vesicle Preparation	23
Protein Concentration	24
Analysis of SR Function	24
Glycogen Measurement	25
Statistical Analyses	25
<b>IV. RESULTS</b>	26
The Effect of Amylase Treatment and Exercise on Uptake Rate of SR Fractions	27
The Effect of Amylase Treatment and Exercise on Release Rate of HSR Fraction	27
The Effect of Amylase Treatment and Exercise on Glycogen Concentration of SR Fractions	27
Correlation Between Glycogen Concentration and SR Fraction	28
