Using High-level Synthesis to Predict and Preempt Attacks on Industrial Control Systems

Zane Ryan Franklin

Thesis submitted to the Faculty of the
Virginia Polytechnic Institute and State University
in partial fulfillment of the requirements for the degree of

Master of Science
in
Computer Engineering

Cameron D. Patterson, Chair
William T. Baumann
Patrick R. Schaumont

March 31, 2014
Blacksburg, Virginia

Keywords: Industrial control systems, security, reconfigurable platform, high-level synthesis, system-on-chip

Draft 09/01/2009

Virginia Tech ETD Fair Use Analysis Results

This is not a replacement for professional legal advice but an effort to assist you in making a sound decision.

Name: Zane Franklin

Description of item under review for fair use: Figure 3.1: Xilinx Zynq-7000 SoC Architecture. Source: Xilinx. Zynq-7000 All Programmable SoC Overview, v1.6 edition, Dec 2, 2013. http://www.xilinx.com/support/documentation/data_sheets/ ds190-Zynq-7000-Overview.pdf.

Report generated on: 04-15-2014 at : 18:27:48

Based on the information you provided:

Factor 1

Your consideration of the purpose and character of your use of the copyright work weighs: ***in favor of fair use***

Factor 2

Your consideration of the nature of the copyrighted work you used weighs: ***in favor of fair use***

Factor 3

Your consideration of the amount and substantiality of your use of the copyrighted work weighs: ***in favor of fair use***

Factor 4

Your consideration of the effect or potential effect on the market after your use of the copyrighted work weighs: ***in favor of fair use***

Based on the information you provided, your use of the copyrighted work weighs: *in favor of fair use*
