1936 Annual Report

Iale of Wight County

B. H. DeHart, County Agent

This year has been by far the best year from the standpoint of accomplishments that contribute directly to making the farm home a better place to live and enabling the rural people to enjoy some of the modern conveniences they have so long deserved. During the past year the farmers have had more interest in the productivity of their soil and have adopted more definite practices leading to a more prosperous agriculture than any one year. They are seeking and using more scientific information in regard to the needs of their soil as shown by soil analysis and information on modern methods of feeding livestock.

The definite accomplishments for the year that make the above statement possible are the construction of over twenty miles of rural electric lines and a project under consideration that will add approximately twenty additional miles of electric lines in the county. The lines already constructed are serving approximately one hundred rural homes, and a possibility of fifty to seventy-five additional homes being served from this line with short extensions from the main line. The twenty mile line under consideration at present will serve at least one hundred farm homes. The Extension Agent does not claim credit for this accomplishment, but it has been one of the projects included in the program of work and considerable time and effort has been given to this work to coordinate the efforts of local citizens to secure these advantages for the rural people in Iale of Wight County.

The progress made on soil improvement has been evidenced by the report from the local seed dealers, which show over three times the amount of clover seed sold this year as compared to 1935. One dealer reports 5,000 pounds sold last year and 18,000 pounds in 1936. Over 500 soil tests were made for farmers in the county who requested this service as a means of finding out their soil needs before purchasing fertilizer. There is no definite evidence as to the number of farmers making use of the recommendations of the Agent, but farmers have come to the office and volunteered their praise for soil testing. It is realized that this work must be carried on with caution as soil testing and making fertilizer recommendations according to the test is not accurate unless the general soil and crop needs are considered. It is at least better than a guess, or making general recommendations without any knowledge of the plant food in the soil. The car lot shipments of lime through the Cooperative increased from seven to ten. There is no definite records available as to the exact increase of lime purchased through other dealers or of lime sold in truck lots from the plant.

The interest in pure bred livestock increased over last year with twenty-five pure breeds placed in 1935 and seventy-one in 1936. This number only refers to the pigs ordered by the agent from breeders outside of the county and does not include all of the pigs purchased from breeders located in the county.

GOALS AND ACHIEVEMENTS FOR 1936

Goals

Achievements

Soil Improvement

- | | |
|--|---|
| 1. Continue to encourage the seeding of permanent pasture and advise in the maintenance of old stands. | 50 acres or more were seeded.
36 acres fertilized. |
| 2. Have 1,000 acres of land limed or marled. | This was exceeded. 500 acres limed with lime purchased through Cooperative, which was only a small part of lime used. |
| 3. Encourage the seeding of lespedeza and crimson clover. | 800 acres of crimson clover and 1,000 acres of lespedeza seeded, would be a conservative estimate. |

Farm Crops

- | | |
|--|---|
| 4. Give information on fertilizer recommendations. | This was done through nine community meetings, circular letters, and news articles. |
| 5. Encourage use of Trice No. 2 cotton seed. | Seed dealers purchased 300 bushels. 1,000 bushels available for 1937. |

Livestock

- | | |
|--|---|
| 6. Place 20 pure breds. | 71 were placed. |
| 7. Encourage the practice of hogging off corn and use of summer pasture. | This practice was materially increased. |

Poultry

- | | |
|--|--|
| 8. Continue the work of establishing 100 hens on every farm in county. | This was done through circular letters, meetings, and news articles. |
|--|--|

Cooperative Purchasing

- | | |
|--|--|
| 9. Assist the Isle of Wight Farmers Cooperative. | This was done. Volume in 1936 was over \$32,000.00. Completed purchasing agreement for farm machinery, feeds, and seeds. |
|--|--|

Organization

- 10. Continue work with Farmers' Clubs. This was done. The majority held regular monthly meetings.

Miscellaneous

- 11. Encourage support of the Soil Conservation Program. This was done. 1,050 farms covered by Work Sheets.
- 12. Work with County Fair. This was done. The quality of exhibits was far superior to previous years.
- 13. Continue cooperation with local experiment station. This was done. 50 farmers from Isle of Wight attended the annual Field Day and five made a special visit.
- 14. Prevent serious loss of hogs from cholera. Loss due to cholera was very small.

Rural Electrification

- 15. Endeavor to get electric service to three communities and have survey made on line to three other communities. This was completed.

NARRATIVE INTERPRETATION OF SOME OF THE MAJOR PROJECTS

Soil Improvement

The soil improvement work was advanced several years as a result of the Soil Conservation Program of the Agricultural Adjustment Administration. The publicity, discussion, and encouragement from the national administration caused many farmers to take inventory of their soil and the past methods used to maintain and increase the fertility of the soil. This inventory found many farms and farmers in the red on soil building practices. The increased seedings of soil conservation crops and soil building crops, as clover and lespedeza, increased materially. At this time the totals are not available from the records of the Soil Conservation Association showing the exact number of acres seeded.

The testing of soil was used as one method of showing the need for lime and the relative amount of plant food present in the soil. These tests were made by Dr. Jackson B. Hester of the Virginia Truck Experiment Station and the Soils Department at Virginia Polytechnic Institute, Blacksburg, Virginia. The results of the tests were mailed to the County Agent, who discussed these tests with Mr. E. T. Batten of the local experiment station before making definite lime and fertilizer recommendations. Each farmer who had tests made was given a copy of the test with a letter containing specific recommendations for each field. These recommendations were used by many of the farmers with splendid results. The tests for the soils in this county showed a definite need for fertilizers containing high phosphorus and potash, as practically all soils were too low in these elements for peanut production. The majority of the soils were found to be deficient in magnesium. The symptoms of magnesium deficiency were pointed out to the farmers living in the sections where this condition was found. Magnesium limestone was recommended to correct this deficiency.

Farm Crops

The fertilizer recommendations for all crops were secured from the Experiment Station. The farmers are making use of these recommendations as evidenced by the continual increase in the sale of the various analysis fertilizers recommended by the Station.

The recommendations consisted mainly of the use of a small part of the amount on corn at planting time with split applications of a soluble form of nitrogen during the growing season and at least 12 per cent phosphorus in corn fertilizers where phosphorus was poor. The increased phosphates on soils poor in phosphorus gave an increase of from three to ten bushels per acre and the corn was firmer and of better quality.

The fertilizer work on peanuts consisted mainly of getting farmers to use phosphates, potash, and lime on peanuts on a small area, or leave a small check plot to determine the value of each. These results showed that on the majority of soils low in potash and phosphorus the use of these elements paid well, if the P.E. of the soil was not too low. On soils where the P.E. was around 5.0 or 5.3 the use of lime alone, or 6 per cent potash lime, paid better than the 0-12-6 or 2-12-6 fertilizer. The best fields were obtained where the lime, potash and phosphorus were added to soils low in these elements.

Two potash demonstrations on peanuts were conducted to find out how much potash was profitable. These tests were conducted on soils that were poor in potash, and the results showed that it was not profitable to use over 12 per cent potash in fertilizers on peanuts. The greatest increase was between no potash and the plot receiving 6 per cent.

A special strain of Trice cotton, known as Trice No. 2, has been developed at the Experiment Station. It has given a greater yield of seed cotton per acre than other varieties in the test, and the cotton will bring a premium due to the staple length. In addition to the yield and staple length it matures about ten days to two weeks earlier than the common varieties used in this section, which is a distinct advantage in eliminating loss due to boll weevil. Two seed dealers purchased 300 bushels of this seed and part of this was sold to growers who had their cotton certified and saved the seed for use in 1937. More than 1,000 bushels will be available to growers in this county. It is hoped that in the future this county or the larger cotton growing communities will have only one variety of cotton.

Watermelons. The disease control work of the Virginia Truck Experiment Station was continued. The melon growers are facing a complete loss of the income derived from this crop due to a wilt disease. The Experiment Station has been making crosses and experimenting with disease resistant varieties since 1931 in an effort to have a good commercial wilt resistant variety available to the growers. Greater progress was made this year than any of the other years and it is believed that a melon has been found that will take the place of the old variety of Virginia Owens and Thurmond Gray. The attached copy of the results of the various crosses show the progress that has been made. The Australia Thurmond Gray appears to be the best chance at present.

Work conducted by Harold T. Cook, Plant Pathologist of Virginia Truck Experiment Station in cooperation with County Agent, P. H. DeHart, Isle of Wight County.

Livestock

The work with livestock was largely with hogs, as hogs represent the class of livestock from which the larger part of the livestock income is derived and also because this county is well adapted to swine production. The Smithfield Ham industry is located in the county, which provides a good market. Farm surveys in this and adjoining counties have shown the labor income to be higher on farms deriving part of their income from livestock rather than all farm crops. Due to the advantages of cheap feed, nearness to a good market, and the results of these surveys, a farm management program has been recommended that would tend to increase the number of hogs on farms in the county. I do not think the numbers have been increased as much as the quality and type. The hog producers are using pure bred sires, hogging off corn, providing summer pastures, feeding fish meal, and minerals, and marketing their hogs at younger ages than they have been in the past. One large dealer reports 25 tons of fish meal sold to date this year as compared to 8 tons during 1935 and 4 tons of mineral mixture this year as compared to two tons last year. Approximately 1,000 hogs were marketed live in the early fall as compared to 200 to 300 in 1935.

The hog producers cooperated with the cholera control work better than usual by having their hogs vaccinated as a preventative rather than wait for an outbreak of cholera. 11,538 hogs were vaccinated for the prevention of cholera. Due to the splendid cooperation of the hog raisers the loss from cholera was very small as compared to previous years.

Cooperative Purchasing

The cooperative movement in Isle of Wight is progressing as rapidly as could be expected without having anyone paid by the Cooperative to solicit business. The volume of over \$32,000.00 business in 1936 was obtained by voluntary purchases through the ten local Farmers' Clubs in the county. This Cooperative has completed arrangements to purchase farm machinery and supplies at wholesale prices during 1937. The Cooperative movement is expected to spread more in the future than it has in the past, as the farmers are beginning to realize the value of having some Cooperative to protect them against unfair and unreasonable prices, and also to have some method of expressing themselves as a group.

Soil Conservation

This part was discussed under soil improvement. There were 1050 Work Sheets executed, which covered approximately 93 per cent of the peanut acreage and ninety per cent of the cotton acreage in the county.

4-H Club Work

The enrollment in 4-H Clubs was 111 members carrying 119 projects. One hundred members completed 106 projects. Very competent leaders should be given credit for the completion percentage increase over last year.

Three of the four leaders were new at the beginning of the year. All of these leaders proved to be a great asset to their respective clubs. It was late in the year before they could do very much because none of them were very familiar with club work. The coming year looks very bright as for leaders.

Only three members attended the Cape Henry Short Course. There were no old club members that had ever attended. Those that attended will be a great help next year in getting members to attend.

The county entered in the Thomas E. Wilson meat animal contest and the Barrett Nitrate of Soda contest. Shirley Joyner won the state prize in the Barrett contest and took the trip to Chicago.

The outlook for next year is very encouraging. The members are more interested now than at any time this year. The reason for this extra interest has come from the county having a state winner and the fine booths that each club put up at the County Fair.

CONDENSED STATISTICAL REPORT

Number letters mailed	2761
Number miles traveled	30301
Number office calls	3747
Number telephone calls	1571
Number circular letters	72
Number copies mailed	17582
Farmers' meetings held	96
Attendance at above meetings	1632
Farm and home visits	1028
Different farms visited	508
News articles published	25

Date _____

SUGGESTIONS RELATIVE TO THE PREPARATION OF THE COUNTY EXTENSION AGENT'S ANNUAL REPORT

The annual report should be a summary, with analysis and interpretations, for presentation to the people of the county, the State, and the Nation of the extension activities in each county for the year, and the results obtained by the county extension agents assisted by the subject-matter specialists. The making of such a report is of great value to the county extension agents and the people of the county in showing the progress made during the year as a basis for future plans. It is of vital concern also to the State and Nation as a measure of rural progress and a basis for intelligent legislation and financial support of extension work.

At least four copies of the annual report should be made: One copy for the county officials, one copy for the agent's files, one copy for the State extension office, and one copy for the Extension Service, United States Department of Agriculture. *The report to the Washington office should be sent through the State extension office.*

STATISTICAL SUMMARY

Where two or more agents are employed in a county they should submit a single statistical report showing the combined activities and accomplishments of all county extension agents employed in the county during the year. Results obtained through assistance rendered agents by specialists should also be included. This report shows, insofar as possible, the part each agent has taken in forwarding the extension program. The county totals should be the sum of the activities and accomplishments of individual agents minus duplications due to two or more agents participating in the same activity or accomplishment. The county totals, when properly recorded, show the progress made in the county during the year in forwarding the entire extension program. Negro men and women agents should prepare a combined statistical report separate from that of the white agents.

The statistical summary should be a report of this year's activities and results that can be verified by records on file in the county office. Where records are not available careful estimates are desired. Such estimates should be marked "Est."

NARRATIVE SUMMARY

A separate narrative report is desired from the leader of each line of work, such as county agricultural agent, home demonstration agent, boys' and girls' club agent, and Negro agent. Where an assistant agent has been employed during a part or all of the year, the report of his or her work should be included with the report of the leader of that line of work. Where an agent in charge of a line of work has quit the service during the year, the information contained in his or her report should be incorporated in the annual report of the agent on duty at the close of the report year, and the latter report so marked.

The narrative report should summarize and interpret, under appropriate subheadings, the outstanding results accomplished and the extension methods used for each project. Every statement should be clear, cut, concise, forceful, and, where possible, reinforced with necessary data from the statistical summary. Use a descriptive style of writing, giving major accomplishments first under each project. Give extension methods fully relating to outstanding results only, and where practicable illustrate with photographs, maps, diagrams, blueprints, or copies of charts and other forms used. Full credits should be given to all cooperating agencies. The lines should be single-spaced, with double space between the paragraphs and reasonably good margins. The pages should be numbered in consecutive order.

The following outline is merely suggestive of how the narrative report may be clearly and systematically presented. Each agent should prepare an outline to fit the situation and the work to be reported.

SUGGESTIVE OUTLINE OF ANNUAL NARRATIVE REPORT

- I. Cover and title page.
- II. Table of contents.
- III. Summary of activities and accomplishments, preferably of one or two typewritten pages only, placed at the beginning of the narrative report.
- IV. Changes in county extension organization.
 - (1) Form.
 - (2) General policies.
 - (3) Procedure.
- V. County program of work.
 - (1) Factors considered and methods used in determining program of work.
 - (2) Project activities and results.

Under appropriate headings and subheadings present in some detail for each major project or line of work the goals set up, the methods used, the results achieved, and the significance of those results in terms of improved farms and homes and of better community life.
- VI. Outlook and recommendations, including suggestive program of work for next year.

TERMINOLOGY

To insure reports which convey the intended meaning to others and to facilitate the compilation of satisfactory national statistics on extension, it is extremely important that terms be used in accordance with accepted definitions. The following definitions of extension terms have been approved by the United States Department of Agriculture and the Association of Land Grant Colleges and Universities. Agents should read these definitions before starting to write the annual reports.

DEFINITIONS OF EXTENSION TERMS

1. A program of work is a statement of the specific projects to be undertaken by the extension agents during a year or a period of years.
2. A plan of work is a definite outline of procedure for carrying out the different phases of the program of work. Such a plan provides specifically for the means to be used and the methods of using them. It also shows what, how much, when, and where the work is to be done.
3. A community is a more or less well-defined group of rural people with common interests and problems. Such a group may include those within a townships, trade area, or similar limits. For the purpose of this report a community is one of the several units into which a county is divided for conducting organized extension work.
4. A project leader, local leader, or committeeman is a person who, because of special interest and fitness, is selected to serve as a leader in advancing some phase of the local extension program. A project leader may be either an organization or a subject-matter leader.
5. Demonstrations as contemplated in this report are of two kinds—method demonstrations and result demonstrations. A method demonstration is a demonstration given by an extension worker or other trained leader for the purpose of showing how to carry out a practice. Examples: Demonstrations of how to can fruits and vegetables, mix spray materials, and cull poultry.
A result demonstration is a demonstration conducted by a farmer, home maker, boy, or girl under the direct supervision of the extension worker, to show locally the value of a recommended practice. Such a demonstration involves a substantial period of time and records of results and comparisons, and is designed to teach others in addition to the person conducting the demonstration. Examples: Demonstrating that the application of fertilizer to cotton will result in more profitable yields, that underweight of certain children can be corrected through proper diet, that the use of certified seed in growing potatoes is a good investment, or that a large farm business results in a more efficient use of labor.
The adoption of a farm or home practice resulting from a demonstration or other teaching activity employed by the extension worker as a means of teaching is not in itself a demonstration.
6. A result demonstrator is an adult, a boy, or a girl who conducts a result demonstration as defined above.
7. A cooperator is a farmer or home maker who agrees to adopt certain recommended practices upon the solicitation of an extension worker. The work is not directly supervised by the extension agent and records are not required, but reports on the success of the practices may be obtained.
8. A 4-H Club is an organized group of boys and/or girls with the objectives of demonstrating improved practices in agriculture or home economics, and of providing desirable training for the members.
9. 4-H Club members enrolled are those boys and girls who actually start the work outlined for the year.
10. 4-H Club members completing are those boys and girls who satisfactorily finish the work outlined for the year.
11. A demonstration meeting is a meeting held to give a method demonstration or to start, inspect, or further a result demonstration.
12. A leader-training meeting is a meeting at which project leaders, local leaders, or committeemen are trained to carry on extension activities in their respective communities.
13. An office call is a call in person by an individual or a group seeking agricultural or home-economics information, as a result of which some definite assistance or information is given. A telephone call differs from an office call in that the assistance or information is given or received by means of the telephone. Telephone calls may be either incoming or outgoing.
14. A farm or home visit is a call by the agent at a farm or home at which some definite information relating to extension work is given or obtained.
15. Days in office should include time spent by the county extension agent in the office, at annual and other extension conferences, and on any other work directly related to office administration.
16. Days in field should include all days spent on official duty other than "days in office."
17. Letters written should include all original letters on official business. (Duplicated letters should not be included.)
18. An extension school is a school, usually of 2 to 6 days' duration, arranged by the Extension Service, where practical instruction is given to persons not resident at the college. An extension short course differs from an extension school in that it is usually held at the college or another educational institution and usually for a longer period of time.
19. Records consist of definite information on file in the county office that will enable the agent to verify the data on extension work included in this report.
20. The county extension association or committee is that county organization, whether a membership or a delegate body, which is recognized officially in the conduct of extension work in the county.

GENERAL ACTIVITIES

Report Only This Year's Extension Activities and Results That Can Be Verified

1. List below the names, titles, and periods of service of the county extension agents whose work is included in this report. Include time of assistants with that of regular agent.

AGENT	Total months of service this year (a)	Days devoted to ag- ricul-ture and adjustment programs (b)	Days de- voted to relief work (c)	Total days in office (d)	Total days in field (e)
(Name) Home demonstration agent.....					
Asst. home demonstration agent.....	(1)				
4-H Club agent.....					
Assistant 4-H Club agent.....	(2)				
<i>P. H. De Hart</i> Agricultural agent.....		24	120	206	390
<i>I. B. Wilson</i> Assistant agricultural agent.....	(3)				

2. County extension association or committee:

(a) Agricultural extension:

(1) Name *Federation of Farmers' Clubs* (2) Number of members *30*

(b) Home demonstration:

(1) Name..... (2) Number of members.....

(c) 4-H Club:

(1) Name..... (2) Number of members.....

3. Number of communities in county where extension work should be conducted..... 9

4. Number of above communities in which the extension program has been planned cooperatively by extension agents and local committees..... 9

5. Number of different voluntary county or community project leaders or committeemen actively engaged in forwarding the extension program.....

(a) Adult work { (1) Men *27* (2) Women *3* } (b) 4-H Club work { (1) Men..... (3) Older club boys..... (2) Women *3* (4) Older club girls *1* }

6. Number of different paid local leaders engaged in agricultural-conservation and adjustment programs.....

{ (a) Men *13* (b) Women *0* }

7. Number of clubs or other groups organized to carry on adult home demonstration work.....

8. Number of members in such clubs or groups.....

ITEM	Home demonstra- tion agents (a)	4-H Club agents (b)	Agricultural agents (c)	County total ¹ (d)
9. Number of 4-H Clubs.....			<i>4</i>	<i>4</i>
10. Number of different 4-H Club mem- bers enrolled.....			(1) Boys ²	<i>51</i>
			(2) Girls ²	<i>60</i>
11. Number of different 4-H Club mem- bers completing.....			(1) Boys ²	<i>47</i>
			(2) Girls ²	<i>53</i>

12. Number of different members enrolled in 4-H Club work for:³

MEMBERS	1st year	2d year	3d year	4th year	5th year	6th year and over
(a) Boys.....	<i>41</i>	<i>7</i>	<i>2</i>		<i>1</i>	
(b) Girls.....	<i>46</i>	<i>6</i>	<i>3</i>	<i>3</i>	<i>1</i>	<i>1</i>

¹ County total should equal sum of preceding three columns minus duplications due to two or more agents participating in the same activity or accomplishment.

² Report the total number of different boys or girls enrolled in club work. This total should equal the sum of the project enrollments reported on pages 7 to 9, minus duplications due to the same boy or girl carrying on two or more subject-matter lines of work.

³ Same as footnote 2 but refers to completions instead of enrollments.

⁴ The total for this question should agree with county total, question 12.

14. Number of 4-H Club members: (a) In school 111 (b) Out of school 14

ITEM	Home demonstration agents (a)	4-H Club agents (b)	Agricultural agents (c)	County total ² (d)
15. Number of 4-H Club teams trained: (1) Judging				0
(2) Demonstration				0
16. Number of groups other than 4-H Clubs organized for extension work with rural young people 16 years of age and older				
17. Members in groups reported in question 16: (1) Young men				
(2) Young women				
18. Total number of farm or home visits ³ made in conducting extension work			1028	1028
19. Number of different farms or homes visited			508	508
20. Number of calls relating to extension work: (1) Office				3742
(2) Telephone				1571
21. Number of news articles or stories published ⁴				25
22. Number of individual letters written				2761
23. Number of different circular letters prepared (not total copies mailed)				72
24. Number of bulletins distributed				895
25. Number of radio talks made				-
26. Number of events at which extension exhibits were shown				-
27. Training meetings held for local leaders or committeemen:	(1) Adult work:	(a) Number	4	4
		(b) Men leaders	50	50
		(c) Women leaders		
(2) 4-H Club:	(a) Number	1	1	
	(b) Leaders	3	3	
28. Method demonstration meetings held (include all method demonstrations in both adult and 4-H Club work given by agents and specialists not reported under question 27):	(1) Number			
	(2) Total attendance			
29. Meetings held at result demonstrations:	(1) Number		2	2
	(2) Total attendance		75	75

¹ The total for this question should agree with county total, question 13.² County total should equal sum of preceding three columns minus duplications due to two or more agents participating in the same activity or activity.³ Do not count a single visit to both the farm and home as two visits.⁴ Do not count items relating to notices of meetings only.

Note.—Questions 15-24 refer to the total number of different activities conducted this year. The totals should equal the sums of the corresponding information reported on following pages minus duplications where the same activity relates to two or more lines of work.

GENERAL ACTIVITIES—Continued

33. Other meetings of an extension nature participated in by agents or specialists and not previously reported	(1) Number			96	96
	(2) Total attendance			1632	1632
34. Meetings held by local leaders or committeemen not participated in by agents or specialists and not reported elsewhere	(1) Adult work	(a) Number		10	10
		(b) Total attendance		325	325
	(2) 4-H club	(a) Number		4	4
		(b) Total attendance		100	100

SUMMARY OF EXTENSION INFLUENCE FOR YEAR

It is highly desirable for extension workers to consider the proportion of farms and farm homes in the county which have been definitely influenced to make some substantial change in farm or home operations as a result of the extension program for men, women, boys, and girls. It is recognized that this information is very difficult for agents to report accurately, so a conservative estimate based upon such records, surveys, and other sources of information as are available will be satisfactory. Such estimates should be marked "Est."

Include results of emergency activities as well as the regular extension program.

35. Number of farms in county	1416	35
36. Number of farms on which changes in practices have definitely resulted from the agricultural extension program	500	36
37. Number of farm homes in which changes in practices have definitely resulted from the home demonstration program		37
38. Number of other homes in which changes in practices have definitely resulted from the home demonstration program		38
39. Number of farm homes with 4-H Club members enrolled	75	39
40. Number of other homes with 4-H Club members enrolled		40
41. Total number of different farm families influenced by some phase of the extension program (Include questions 36, 37, and 38, minus duplications.)	525	41
42. Total number of different other families influenced by some phase of extension program (Include questions 39 and 40, minus duplications.)		42

* County total should equal sum of preceding three columns minus duplications due to two or more agents participating in the same activity or accomplishment.

NOTE.—Questions 35-42 refer to the total number of different activities conducted this year. The totals should equal the sums of the corresponding information reported on following pages minus duplications where the same activity relates to two or more lines of work.
