

Acknowledgements

The author wishes to express his deep gratitude to Dr. G.V. Loganathan, chairman of the author's graduate committee, for his continued encouragement and professional guidance throughout the entire course of his study. Appreciation is extended to Dr. W. E. Cox, Dr. V. K. Lohani, Dr. A. A. Trani and Dr. T. Younos, the committee members, for their technical guidance. Their helpful suggestions and constructive criticism on this work are greatly appreciated.

The author also appreciates the financial support from the U.S. Geological Survey, Roy F. Weston, Inc., NSF-SUCCEED Coalition, and the Department of Civil and Environmental Engineering at Virginia Tech.

Finally, this dissertation would not have been possible without the love of the author's parents.

TABLE OF CONTENTS

	Page
Abstract	ii
Acknowledgements	iii
Table of Contents	iv
List of Tables	vi
List of Figures	vii
1. Introduction	1
1.1 Motivation	1
1.2 Research Goals	2
1.3 Organization of Dissertation	2
2. Literature Review	3
2.1 Deterioration Point Assignment Schemes	3
2.2 Depreciation/Break Even Analysis	3
2.3 Regression and Failure Probability Methods	4
2.4 Optimization Methods	5
3. Economically Sustainable Threshold Break Rate	7
3.1 Development of the Threshold Break Rate Equation	7
3.2 Relationship between the Threshold Break Rate, Intensity and Hazard Functions	9
3.3 Exponential Break Rate Model	10
3.4 Linear Break Rate Model	11
3.5 Poisson Rate of Occurrence of Failure (ROCOF)	12
3.6 Application to Controlled Data	13
3.7 Practical Usage of the Threshold Break Rate	19
4. Probabilistic Break Rate Models	23
4.1 Introduction	23
4.2. Proportional Intensity Model (PIM)	23
4.3 Optimal Replacement Time Analysis Using the Weibull Proportional Intensity Model (WPIM)	24
4.4 Proportional Hazards Model (PHM)	25
4.5 Survival Analysis Using the Proportional Hazards Model	27
4.6 Hazard Function between Breaks	28
4.7 General Break Regression Model	30
4.8 Optimal Replacement Analysis with the General Break Regression Model	34
5. Description of the Case Study Water Distribution System	36
5.1 Distribution System Overview	36
5.2 Data Sources	36
5.2.1 Maintenance Department Break Database	36
5.2.2 Paper Break Records	37
5.2.3 Depreciation Database	37
5.2.4 Pipe Material History	38
5.3 System Characteristics	41
5.3.1 Pipe Inventory	41

5.3.2 Main Break History	41
5.4 Modeling Basics	50
5.4.1 Pipe Identification	50
5.4.2 Cost Information	51
6. Application of the Probabilistic Pipe Failure Models	53
6.1 Introduction	53
6.2 Covariate Data Collection	53
6.3 Soil Survey	54
6.4 Description of the Covariates	55
6.5 Evaluation of the Covariate Values	56
6.6 Assignment of the Covariate Values to Pipes	59
6.7 Application of the Weibull PIM	62
6.8 Application of the PHM	69
7. Application of the General Break Regression Model (GBRM) to the Case Study Pipe Break Database	82
7.1 Introduction	82
7.2 Indirect Cost of Repair	82
7.2.1 Value of Water Lost	83
7.2.2 Liability to Third Parties	83
7.2.3 Traffic Disruption	83
7.2.4 Service Disruption	83
7.3 Optimal Replacement Analysis with the General Break Regression Model	84
7.3.1 Optimal Replacement Analysis Results	89
7.3.2 Results for the Various Cost Options	89
7.3.3 Comparison of Results by the General Break Regression Model and the Weibull PIM	91
7.3.4 Replacement Strategy Evaluation	98
8. Summary	100
References	102
Appendix A. Estimation of Parameters in the Weibull Proportional Intensity Model	105
Appendix B. Estimation of Parameters and Baseline Hazard Function in the Proportional Hazards Model	108
Appendix C Derivation of the Shamir and Howard (1979) Exponential Break Prediction Equation	112
Appendix D. Computer Programs and Input/Output Files	115
Vita	159

LIST OF TABLES

	page
3.1 Controlled Break Time Data	14
3.2 Break Times and Corresponding Hazard	15
3.3 Controlled Break Times for Weibull ROCOF	16
3.4 Example Threshold Break Rate Table (R = 0.075)	19
3.5 Cost Table by Pipe Size	20
3.6 Cost Ratio Table by Pipe Size	20
5.1 Break Database Key Fields	37
5.2 Example of Depreciation (Analysis) Database	38
5.3 Direct Pipe Replacement and Repair Costs Used in the Modeling	52
6.1 Soil Type Information from the Case Study Area Soil Survey	54
6.2 Example Values of the Covariates based on the Soil Survey	56
6.3 Covariate Values for Soil Associations	58
6.4 Hydraulic Conductivity by Soil Type	59
6.5 Values of Hydraulic Conductivity by Soil Association.	59
6.6 Sample Pipe Break Database with GRID Information.	60
6.7 Explanation of the Fields in the Database	61
6.8 Example Results of the Optimal replacement Analysis Using the Weibull PIM	64
6.9 Optimal Replacement Years for Group DI-1 by the PHM	81
7.1 Example Indirect Costs for A 6-inch Pipe.	82
7.2 Summary of Modeling Results	90
7.3 Sample Optimal Replacement Analysis Results by the Weibull PIM and the GBRM	92

LIST OF FIGURES

	page
3.1 Plot of dn/dt and $Alpha(n)$ for the Controlled Data	16
3.2 Weibull ROCOF function and $Alpha(n)$	17
3.3 Plot of Weibull Fit for the Controlled Data	18
3.4 Diameter and Cost Ratio	20
3.5 Threshold Break Rate Graphs for Pipe Size and Length ($R = 0.06$)	21
3.6 Threshold Break Rate Graphs for Pipe Size and Length ($R = 0.07$)	22
4.1 Water Main Break History	28
4.2 Water Main Break History (from installation to the first break)	29
4.3 Water Main Break History (from the first break to the second break)	29
4.4 The General Break Regression Model Building Process	33
5.1 The Water Company Timeline for Pipe Installation	40
5.2 Pipe System Composition by Material	42
5.3 Pipe System Composition by Diameter	43
5.4 Pipe System Composition by Vintage	44
5.5 Main Breaks per 100 Miles Since 1983	45
5.6 Percentage Main Breaks by Material	47
5.7 Percentage Main Breaks Since 1983 Compared to Main Type	48
5.8 Main Breaks Over Time by Pipe Material	49
6.1 The GRID Map of the Study Area	61
6.2 Failure Rate Plots of Pipe ID 2-1933-CI-12	65
6.3 Failure Rate Plots of Pipe ID 14449-1952-CI-6	65
6.4 Failure Rate Plots of Pipe ID 13617-1951-CI-6	66
6.5 Failure Rate Plots of Pipe ID 72-2550-1972-CI-6	66
6.6 Failure Rate Plots of Pipe ID 4194-1941-CI-6	67
6.7 Cumulative Baseline Hazard for DI-0 group	72
6.8 Cumulative Baseline Hazard for CI-0 group	73
6.9 Cumulative Baseline Hazard for DI-1 group	73
6.10 Cumulative Baseline Hazard for CI-1 group	74
6.11 Cumulative Baseline Hazard for DI-2 group	74
6.12 Cumulative Baseline Hazard for CI-2 group	75
6.13 Cumulative Baseline Hazard for Group 3	76
6.14 Cumulative Baseline Hazard for Group 4	76
7.1 Break Forecasting Module Overview	86
7.2 Development of Water Main Replacement Candidate Pool	88
7.3 GBRM Plot for PIPE ID 2-1933-CI-12	93
7.4 GBRM Plot for PIPE ID 14449-1952-CI-6	93
7.5 GBRM Plot for PIPE ID 13617-1951-CI-6	94
7.6 GBRM Plot for PIPE ID 72-2550-1972-CI-6	94
7.7 GBRM Plot for PIPE ID 4194-1941-CI-6	95
7.8 Break versus Time Plots of the GBRM, Exponential and Linear Models	98
B.1 Plot of time versus $\hat{H}_0(t)$	111
