

## ACKNOWLEDGMENTS

This work was funded under NASA Grants NAG-1-537, NAG-1-343, and NAG-1-2035. I would like to express my appreciation to Dr. James Starnes, from NASA-Langley Research Center, technical monitor of these grants.

I would like to thank my advisor Dr. Eric Johnson, and Dr. Richard Boitnott, and Dr. Zafer Gürdal for agreeing to serve on my committee. I would also like to thank Mr. Huey Carden, and the people and technicians of the Impact Dynamics Group at NASA-Langley Research Center, where much of the experimental work of this research was conducted, and Mr. Robert A. Simonds for his assistance in the experimental work conducted in the laboratories of the department of Engineering Science and Mechanics at Virginia Tech.
