

ACKNOWLEDGMENTS

I would like to express my sincere gratitude to Dr. Ruby Cox for the immeasurable amount of support and guidance she has provided throughout this study. Dr. Cox's insights into and patient endurance throughout this project have been a true blessing. I would also like to thank my committee members Dr. James Bohland, who has given me support for several years, and Dr. Forrest Thye, who has provided me with much assistance and encouragement throughout my time as both an undergraduate and graduate student. Special recognition is given to the FSNEP Program Assistants who performed the client interviews and the Statistical Consulting Center at Virginia Tech for their help.

I am especially grateful to my family for giving me the opportunity to follow my dreams and the love to make them a reality. Furthermore, I would like to thank my comrades in the HNFE graduate office who have been the best friends, during both good and bad times, that anyone could ever hope for. Your daily laughter and smiles have made my time as a graduate student extremely enjoyable and absolutely unforgettable. Most of all I would like to thank my lord Jesus Christ who's perfect love, patience, and gift are the real strength behind all my work and accomplishments. I owe you everything for the simple reason that you always have been and always will be everything.
