

Acknowledgements

I would like to thank my advisor, Dr. Mehdi Ahmadian, for his help and support throughout my time in the Master of Science program at Virginia Tech. This project would not have been possible without his backing. In addition, I would like to thank Drs. Harry Robertshaw and Pushkin Kachroo for being a part of my graduate committee. I would also like to thank the various groups and companies that were generous in their support of this research. These sponsors include Koni, Lord Corporation, the Federal Highway Administration (FHWA), Volvo Heavy Trucks, and at Virginia Tech, both the Mechanical Engineering Department and the Center for Transportation Research (CTR). I would also like to thank my family for their support and patience for the duration of my time at Virginia Tech.
