

List of Tables

Table 2-1:	Parameters for the VT-TDL TP RLCG for selected TP types. All are PIC TP at 21 °C.	15
Table 3-1:	Line type combination possibilities for one or two subsequent segment(s).	52
Table 3-2:	Final Candidates for GC example. GC: 26 AWG selected.	53
Table 3-3:	WSSE for candidates in Figure 3-25. Minimum WSSE highlighted.	58
Table 4-1:	MODE-WRELAX experiment 1 — parameter estimation results ($\hat{L} = 3$ & SNR = ∞).	72
Table 4-2:	MODE-WRELAX experiment 1 Parameter estimation results 2 ($\hat{L} = 2, 4,$ and 6 & SNR = ∞). (bold face – correct estimations).....	74
Table 4-3:	MODE-WRELAX experiment 2 — parameter estimation results 1 ($\hat{L} = 3$ & SNR = ∞).	76
Table 4-4:	MODE-WRELAX experiment 2 parameter estimation results 2 ($\hat{L} = 2, 4,$ and 6 & SNR = 0 dB). (bold face – correct estimations).....	76
Table 4-5:	MODE-WRELAX estimates for TDR decomposition.....	83
Table 4-6:	Possible BT TP type combinations with 24 AWG and 26 AWG TP types. TP 1 leads the node and TPs 2 & 3 follow the node with respect to the measurement node.....	88
Table 4-7:	MODE-type experiment 5-1 — parameter estimation results for $\hat{L} = 3$. (Best estimates highlighted).....	102
Table 4-8:	Experiment 5-1 — parameter estimation results with $\hat{L} = 3$ (best estimates highlighted).	104
Table 4-9:	MODE-type estimates for TDR decomposition.	106
Table 6-1:	Possible (✓) and improbable (✗) node type candidates based on a model node existing farther out than new node.....	132
Table 6-2:	Identification of CSA & ANSI test loops based on the proposed frequency-response procedure. Measurement generated from Node 1 (CO node). Success (✓) and Failure (✗).	133
