

*let not your mind run wild
for I have dedicated this to thee, my brother
let not your heart swell with pride
for thy did obtain it, only in the absence of my significant other !*

ACKNOWLEDGEMENTS

This thesis is the culmination of the research that I have been involved with in the last 15 months or so. This work is by no means mine alone, and in fact a large part of it is due to the sincere effort of my teachers, friends and colleagues. I express my sincere and heartfelt gratitude to the many people who played an important role in finishing this M.S Thesis of mine.

First and foremost, I would like to thank Dr. Hanif D. Sherali for his valuable guidance and help rendered in the last two years that I have known him. He has been an inspiring person, and it's been a pleasure working with him. I would also like to thank my co-Chair, Dr. Hesham Rakha for all the help rendered as part of this research effort. A grateful thanks to my Committee member, Dr.Subhash C. Sarin, for being so understanding and supportive in the course of my M.S.

An overwhelming thanks to my elder brother, Vishwakarma Desai, for all the love and affection that he has showered on me during my stay in the US. He has been a constant source of support, and I have always found him to be full of life and joy. Thanks *Anna!* I thank my mom and dad for their advice, and love that they exhibit despite being 25000 miles away. A special thanks to my cousin Sanju and his wife Sandhya for their hospitality, and making me feel at home in the US.

Last but not the least come my friends at Virginia Tech, without whose presence I might have completed this thesis in a year instead of 15 months! I thank my roommate, Styly,

for his diligent help at home and for having indulged me in several entertaining conversations. I thank Pramod for having instilled in me a sense of confidence and pride, and furthering me into pursuing my goals.

A special word of mention to my dear Aparna, for being at my side through all those days of hard work. Of particular mention is the wonderful, piping hot tea that awaited me when I got back late in the night. Thanks *Apsy!*

I'd like to mention Dr. Barbara Fraticelli (*Barb*) for the many witty conversations that we've had, and for making things so pleasant in that familiar *OR corridor*. Finally, I thank all my other teachers at VT, Lovedia Cole, Marty Simpson, and the rest of the staff in the Grado department of Industrial & Systems Engineering, Virginia Tech for making my stay so comfortable.
