

ETD Ithenticate Supplemental Documentation and Permission

Dakotah B. Todd

The Ithenticate report shows a 25% overall match percentage, and the first two matches show 15% and 7% match percentage. These first two match percentages come from a publishing website “bioone.org” that is a database hosting open-access titles. These matches come from my publication with the Entomological Society of America’s Journal of Economic Entomology titled **“Field Evaluations of Sulfuryl Fluoride Fumigation for Control of the Common Bed Bug (Hemiptera: Cimicidae), Using a 1.9× Dosage Factor in Motor Vehicles and Filled Cargo Trailers”**, which is used as the third chapter of my thesis. I have attached an excerpt from the Entomological Society of America’s publishing policies and procedures website page permitting the use of my publication in my thesis. The website link is also provided in this document.

Excerpt from “Publishing Policies and Procedures”

ESA journal authors reserve the rights to re-use portions or the entirety of their article published in an ESA journal in a thesis or dissertation, provided the thesis or dissertation is not commercially published.
