What’s Umart

Umart is a second-hand trading platform for students

A easy-to-use and reliable platform for students to trade their items with nearby university students

Umart

What's Umart

Target users

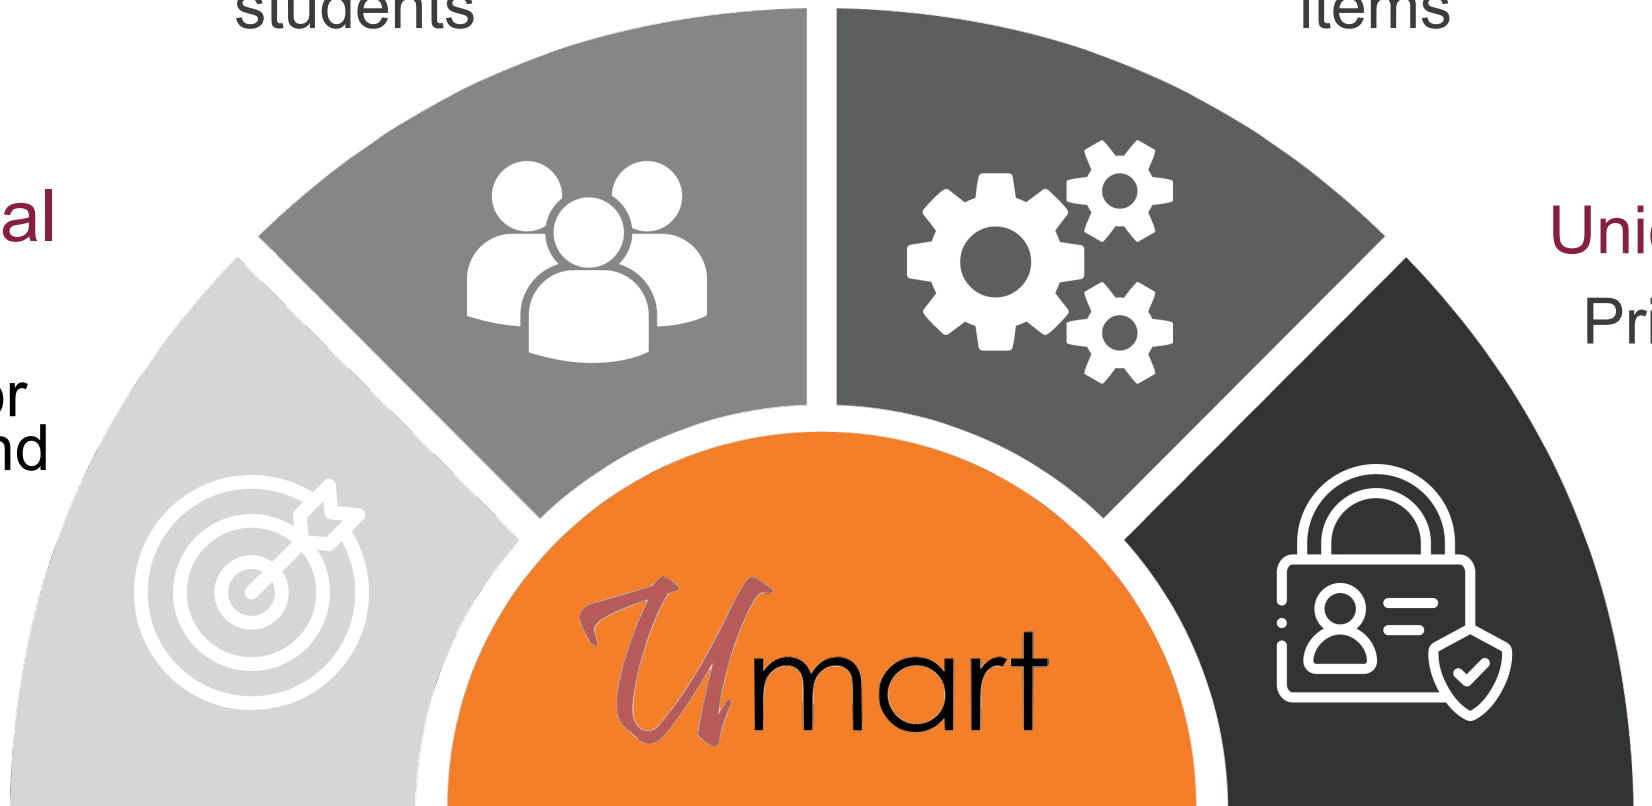
University students

Main functions

Post and search items

Project goal

Provide a reliable platform for second-hand trade



Unique features

Privacy is well secured

How we build Umart

IDEs and Tools

VSCode

Software Development

GitLab

Version Control and CI/CD

Jira

Project Management

Technical details / Design Choices

1 / Language

2 / Framework

3 / Design

4 / Deployment

VIRGINIA TECH

Difficulties

1. **CI/CD**: Time-consuming and has Single Point-of Failure
2. **Deployment:** Challenging to deploy
3. **Authentication (AuthN)**: Hard to ensure user's identity
4. **Search**: Difficult to provide precise results

Overcome

1. **CI/CD:** Virginia Tech Kubernetes (Rancher)
2. **Deployment:** Docker hub and Rancher
3. **AuthN:** Google single sign-in (SSO) and cron job
4. **Search:** Elasticlunr
