Abstract	II
Chapter I Introduction	1
1.1 Problem Description	1
1.1.a The Euclidean Multifacility Location Problem	2
1.1.b The Capacitated Location-Allocation Problem	5
1.2 Organization of Dissertation	8
Chapter II Background and Literature Review	9
2.1 Pure Location Problems	9
2.1.1 Rectilinear Distance Location Problems	10
2.1.2 Euclidean Distance Problems	11
2.1.3 Squared-Euclidean Distance Problems	16
2.1.4 Variants and Extensions	16
2.2 Location-Allocation Problems	18
2.2.1 Location and Location-Allocation Problems on Networks	18
2.2.1.a P-Median Problems	19
2.2.1.b P-Center Problems	21
2.2.2 Continuous Location-Allocation Problems with Discrete Demand Points	21
2.2.2.a Rectilinear Distance Location-Allocation Problems	23
2.2.2 b Euclidean Distance Location-Allocation Problems	24
2.2.2.c Squared- Euclidean Distance Location-Allocation Problems	26
2.2.3 Fixed-Charge Location/Discrete Location-Allocation Problems	26
2.2.4 Stochastic Location-Allocation Problems	28
2.2.5 Location-Allocation Problems with Area Destinations	28
2.2.6 Sequential and Dynamic Location-Allocation Problems	29
2.3 Reformulation-Linearization Technique	30

Chapter III	Equivalent Primal and Dual Differentiable Reformulations of the Euclidean Multifacility Location Problem	33
3.1	Characterization of Subgradients and Optimality Conditions	35
3.2	Differentiable Reformulation in the Primal Space	38
3.3	A Lagrangian Dual Approach	49
3.4	Computational Experience	53
Chapter IV	Solving Euclidean Distance Multifacility Location Problems Using Conjugate Subgradient and Line-Search Methods	56
4.1	Subgradient Generation Strategies	57
4.2	Conjugate Subgradient Algorithm	59
4.2.1	VTVM Algorithm	59
4.2.2	VTVM + BH Algorithm	61
4.3	Line-Search Strategy	61
4.4	Computational Experience	65
Chapter V	Algorithmic Approach for Solving the Capacitated Location-Allocation Problem	73
5.1	A Reformulation Convexification/Linearization Lower Bounding Approach	75
5.1.1	The Reformulation Phase	75
5.1.2	Convexification/Linearization Phase	83
5.2	Lagrangian Relaxation Scheme for Solving Problem $RLT(\Omega)$	85
5.2.1	Evaluation of the Lagrangian Dual Objective Function	88
5.2.2	Conjugate Deflected Subgradient Algorithm for Optimizing the Lagrangian Dual Problem	94
5.3	Other Features of the Lower Bounding Problem	97
5.3.1	Algorithmic Approach for Obtaining the Extreme Points and the Facetial Inequalities of the Convex Hull of the Existing Facility Locations	97

5.3.2 Computation of $\bar{\pi}$ and \bar{w} for the Generation of Constraint (5.25e)	103
5.4 Related Theoretical Results	106
5.5 A Branch-and-Bound Enumeration Algorithm for EDLAP	110
5.5.1 Logical Tests	111
5.5.2 Bounding Step of the Branch-and-Bound Algorithm	114
5.5.3 Partitioning Scheme	115
5.5.4 Computation of Upper Bounds and Updating of Incumbent Solution Based Constraints	117
5.5.5 Other Features of the Branch-and-Bound Algorithm	120
5.6 Computational Experience	123
Chapter VI Conclusions and Recommendations for Future Research	
126	
6.1 Summary and Conclusions	126
6.2 Recommendations for Future Research	128
References	130
Appendix	146
