

Acknowledgment

I am very thankful to my advisor Dr. Amy Bell without whose support this thesis would not have been possible. She carefully guided me throughout the pursuit of my Master's degree at Virginia Tech. Her ideas and suggestions have been invaluable to this thesis.

I would like to thank Dr. A. L. Abbott and Dr. T. C. Poon for their readiness to read this text and evaluate my work.

Many thanks to my colleagues Manish Manglani and Andy Beegan at DspCL for their insightful suggestions and assistance at every stage of my work. I would also like to thank Anbu Subramanian (VISC, Virginia Tech), whose ideas were useful to this thesis.

I greatly appreciate the financial support from Dr. Bell and the Bradley Department of Electrical and Computer Engineering, Virginia Tech which made my work and thesis possible.

Last in this list but first in my heart, I would like to thank my family for the emotional support and encouragement. Finally, I want to express my gratitude to God whose blessings made this effort fruitful.
