I.	REVIEW OF YELLOW PERCH (<i>Perca flavescens</i>) CULTURE.	
	A. TAXONOMIC CLASSIFICATION	1
	B. YELLOW PERCH MARKETS	2
	C. YELLOW PERCH CULTURE.....	5
	1. Growth and Culture	5
	2. Problems.....	6
	3. Production Data.....	8
	4. Temperature and Photoperiod	10
	5. Grading.....	11
	6. Stocking Density	12
	7. Habituation.....	12
	8. Feeding	14
	D. OBJECTIVES	15
	E. LITERATURE CITED	16
II.	COMPARISON OF GROWTH, FEED CONSUMPTION, FEED CONVERSION AND HARVEST DATA OF ALL-FEMALE AND MIXED SEX YELLOW PERCH (<i>Perca flavescens</i>) IN RECIRCULATING AQUACULTURE SYSTEMS.	
	A. INTRODUCTION.....	21
	1. Gynogenesis	22
	2. Direct Estrogen Treatment of Juveniles.....	23
	3. Indirect Use of Hormones	23
	B. INDIVIDUAL GROWTH.....	24
	C. OBJECTIVES	25
	D. METHODS.....	26
	1. RAS Design.....	26
	2. Stocking.....	26
	3. Environmental Conditions	27
	4. Feed Training	27
	5. Feeding.....	28
	6. Sampling.....	28
	7. Tagged Individuals.....	29
	8. Water Quality	30
	9. Harvest Data.....	31

Chapter	Page
10. Statistical Analysis	31
E. RESULTS.....	32
1. Water Quality	32
2. Growth, Feed Consumption, FCR, and Harvest Data.....	32
3. Recovery of Tagged Individuals	34
4. Results Between All Individuals by Stock.....	34
5. Results Between Females by Stock.....	34
6. Results Between Male and Female Individuals	35
Within a Mixed Sex Stock	
7. Predictability of Individual Growth	35
F. DISCUSSION	35
G. SUMMARY	44
H. LITERATURE CITED	45
III. COMPARISON OF FILLET YIELD AND GONADOSOMATIC INDEX (GSI) BETWEEN ALL-FEMALE AND MIXED SEX YELLOW PERCH (<i>Perca flavescens</i>) STOCKS.	
A. INTRODUCTION.....	69
B. OBJECTIVES	70
C. METHODS.....	70
D. RESULTS.....	72
1. Group Results by Stock.....	72
2. Individual Results by Stock.....	72
3. Individual Results by Sex Within a Mixed Sex Stock	72
4. Individual Results Between Females by Stock	72
5. Effect of Fish Size on Fillet Yield.....	73
E. DISCUSSION	73
F. SUMMARY	76
G. LITERATURE CITED	77

LIST OF TABLES

Table		Page
2.1	Total surface area, specific surface area, flow rate and turnover rate for the three biofilter types.	50
2.2	Means and standard errors for pH, temperature, and dissolved oxygen for each 28-day period.	51
2.3	Means and standard errors for NH ₃ , NO ₂ -N, and NO ₃ -N for each 28-day period.	52
2.4	Mean water quality values, standard deviations, standard errors and ranges over the entire study. Data for tank #8 is through day 196.	53
2.5	Total biomass, density, feed conversion and survival for each tank.	54
2.6	Means, standard errors, and ranges for total weight at each sample period.	55
2.7	Absolute growth rates (slope) and fixed intercepts by stock from regression analysis.	56
2.8	Growth contrasts between stock, filter type, and interactions. Contrasts #8 & #9 were between replicated treatments.	57
2.9	Average percent daily body weight consumed per period. Values are for 48-day periods.	58
2.10	Average feed conversion per period. Values are for 48-day periods.	59
2.11	Summary of data obtained from final harvest of each tank.	60
2.12	Pearson correlation coefficients between initial and final weight over 236 days of growth.	61

LIST OF FIGURES

Figure		Page
2.1	Schematic diagram of recirculating aquaculture system in RBC filter treatments.	62
2.2	Schematic diagram of recirculating aquaculture system in trickle filter treatments.	63
2.3	Schematic diagram of recirculating aquaculture system in bead filter treatments.	64
2.4	Mean temperature and dissolved oxygen values of the 7 systems remaining in production over the entire study. Values plotted are 28-day means.....	65
2.5	Mean pH and NH ₃ values of the 7 systems remaining in production over the entire study. Values plotted are 28-day means.....	66
2.6	Mean nitrite (NO ₂ -N) and nitrate (NO ₃ -N) values of the 7 systems remaining in production over the entire study. Values plotted are 28-day means.....	67
2.7	Initial versus final weight in all tagged individuals.	68
3.1	Mean total weight versus fillet yield in mixed-sex groups.	79
3.2	Total weight versus fillet yield in all-female individuals.....	80
