

## LIST of TABLES

---

Table 1.1	Experimental Shear Connection (Lauer et al. 1994)	7
Table 2.1	Push-out Test Results	42
Table 2.2	Full-Scale Test Geometric Parameters	46
Table 2.3	Full-Scale Test Results	46
Table 2.4	ELCO Single Lap Shear Test Results (1992)	47
Table 2.5	ELCO Tensile Tests on Grade 8 Standoff Screws	48
Table 2.6	Shear Test Results	48
Table 2.7	Tensile Test Results	49
Table 3.1	Comparison of Theoretical and Experimental Elastic Stiffness	52
Table 3.2	Loss of Strength When Screw Strength at 0.200 in. of Slip is Considered	52
Table 3.3	Summary of Screw Pull-out Failures	56
Table 3.4	Summary of Screw Shear Failures	56
Table 3.5	Summary of Concrete Rib Failures	58
Table 3.6	Summary of Solid Slab Test Results	60
Table 3.7	Comparison of Theoretical and Calculated Values for Pull-out Failure Equations	66
Table 3.8	Determination of the Effect of $f'_c$ on the Shear Connection Strength	69
Table 3.9	Concrete Rib Failure Strength Prediction	78
Table 3.10	Comparison of Observed and Predicted Screw Strength in Solid Slab Tests	82
Table 3.11	Data Used to Develop the Strength Prediction Model for Screw Shear Failures	85
Table 3.12	Comparison of Calculated and Observed Strengths in Screw Shear Failures	87
Table 3.13	Final Comparison of Theoretical and Experimental Values in Configurations Where Deck is Perpendicular to the Joist	89
Table 3.14	Data for the Failure Envelope Shown in Figure 3.11	92
Table 3.15	Comparison of Predicted vs. Back-calculated Screw Strengths in Composite Joist Tests	95
Table 4.1	Comparison of Derived $\phi$ Factors for Various Reliabilities and Modes of Failure	103
Table 4.2	Full Scale Test CSJ-12: Influence of the Amount of Shear Connection on the Moment Capacity of the Member	106
