

A GUIDE TO SUCCESSFUL PRUNING

Deciduous Tree Pruning Calendar

Bonnie Lee Appleton and Susan C. French*

Comments:

Seldom needs pruning – remove multiple leaders, dead and broken branches

- 1.) Avoid pruning in late winter/early spring due to sap flow (more cosmetic than detrimental)
- 2.) Avoid pruning from spring through summer due to insect or disease problems
- 3.) Avoid pruning from October - December due to reduced cold hardiness
- 4.) Avoid pruning after July because flower buds have set

= Best time to prune

= Do not prune except to correct damage, hazards or structural defects

Where no

or

timing is not critical
