

**Crystallization and Melting Behavior of  
Linear Polyethylene and Ethylene/Styrene Copolymers  
and Chain Length Dependence of Spherulitic Growth Rate for  
Poly(Ethylene Oxide) Fractions**

by

Zhenyu Huang

Dissertation submitted to the Faculty of the  
Virginia Polytechnic Institute and State University  
in partial fulfillment of the requirement for the degree of

DOCTOR OF PHILOSOPHY

IN

CHEMISTRY

Dr. Hervé Marand, Chairman

Dr. T. Daniel Crawford

Dr. William Ducker

Dr. Alan R. Esker

Dr. Timothy E. Long

September 24, 2004

Blacksburg, Virginia

Keywords: Polymer Crystallization, Secondary Crystallization, Reversible Crystallization and Melting, Lauritzen-Hoffman Theory, Brochard-de Gennes model, Reptation, Polyethylene, Poly(ethylene oxide), Ethylene/styrene Copolymer
