

# *Table of Contents*

<b>ABSTRACT</b> .....	ii
<b>ACKNOWLEDGMENTS</b> .....	iii
<b>TABLE OF CONTENTS</b> .....	iv
<b>LIST OF FIGURES</b> .....	vii
<b>LIST OF TABLES</b> .....	xiii
<b>CHAPTER 1 INTRODUCTION</b> .....	1
1.1 Role of fuselage frames in energy absorption .....	1
1.1.1 Fuselage drop tests.....	2
1.1.2 Frame tests and analyses.....	3
1.2 Tape layup composite frames .....	4
1.3 Textile composite frames.....	8
1.3.1 Textile composite materials .....	10
1.3.2 Triaxial braided composite materials.....	11
1.3.3 The TEXCAD computer code .....	13
1.4 Objectives .....	14
1.5 Organization of this document.....	15
<b>CHAPTER 2 DESIGN FOR IMPROVED ENERGY ABSORPTION OF THE FRAMES FABRICATED FROM GRAPHITE-EPOXY TAPE</b> .....	16
2.1 Optimal design methodology for energy absorption .....	16
2.2 Correlation of the analysis to the baseline frame test .....	20
2.3 Design of frames 2I-1, 5I-2, and 6I-2 for improved energy absorption .....	22
2.4 Test apparatus and procedure .....	25
2.5 Test results of the redesigned frames.....	26

2.5.1	Frame 2I-1.....	26
2.5.2	Frame 6I-2.....	29
2.5.3	Frame 5I-2.....	31
2.6	Comparison of analyses and tests for the redesigned frames .....	34
 <b>CHAPTER 3 BRAIDED COMPOSITE COUPON TESTS.....</b>		<b>40</b>
3.1	2x2 2D triaxially braided composite material coupons .....	40
3.2	Other sources of material property data.....	43
3.3	Fiber volume fraction of the $[0^{\circ}_{18k}/\pm 64^{\circ}_{6k}]$ 39.7% axial material .....	46
3.4	Tensile tests of the $[0^{\circ}_{18k}/\pm 64^{\circ}_{6k}]$ 39.7% axial material .....	48
3.5	Flexure tests .....	58
3.6	Discussion of the tensile and flexural test results .....	66
3.7	Correlation of test results with analysis code TEXCAD .....	71
3.7.1	Summary of TEXCAD geometric discretization and analysis .....	71
3.7.1.1	Calculation of three-dimensional effective stiffnesses.....	71
3.7.1.2	Failure criteria .....	72
3.7.1.3	Stiffness reduction.....	72
3.7.2	TEXCAD analysis for the braided composite coupons .....	73
3.7.3	Correlation between TEXCAD analysis and test results .....	74
 <b>CHAPTER 4 BRAIDED COMPOSITE FRAME TEST APPARATUS AND INSTRUMENTATION.....</b>		<b>77</b>
4.1	Frame specimens.....	77
4.2	Test apparatus .....	79
4.2.1	Frame analysis .....	80
4.2.2	Design of the wide flange support beam .....	82
4.2.3	Platen design .....	83
4.2.4	Securing the frame in the end blocks.....	85
4.3	Instrumentation .....	86
 <b>CHAPTER 5 BRAIDED COMPOSITE FRAME TESTS.....</b>		<b>93</b>
5.1	Test results of braided composite frame B .....	93
5.2	Test results of braided composite frame C .....	100
5.3	Analytical model using the computer code ABAQUS .....	110

<b>CHAPTER 6</b>	<b>CONCLUDING REMARKS</b> .....	117
6.1	Results from the tests of the redesigned frames .....	117
6.2	Results from the tests of the textile composite frames .....	118
6.3	Recommendations for future research .....	121
<b>REFERENCES</b> .....		122
<b>APPENDIX 1</b>	<b>SPROPS, PROFAIL, and OPTFAIL Manual</b> .....	128
A1.1	Introduction.....	128
	A1.1.1 Sample problem .....	129
A1.2	SPROPS computer code .....	131
	A1.2.1 Input file.....	131
	A1.2.2 Output file .....	135
A1.3	PROFAIL computer code .....	136
	A1.3.1 Input file.....	136
	A1.3.2 Output file .....	142
A1.4	OPTFAIL computer code .....	143
	A1.4.1 Input file.....	143
	A1.4.2 Output file .....	148
<b>APPENDIX 2</b>	<b>TEXCAD Example</b> .....	149
A2.1	TEXCAD input .....	149
A2.2	TEXCAD output.....	154
<b>VITA</b> .....		158
