

Fig. 1.1	Turbulent flow being distorted by a Rotor-stator system	53
Fig 2.1	Top and side views of the cascade wind tunnel. Dimensions in meters	54
Fig 2.2	Top view of the Virginia Tech Cascade Wind Tunnel Test Section. Dimensions in meters	54
Fig 2.3	Cascade Tunnel general view	55
Fig 2.4	Cascade Tunnel inlet section roof top	56
Fig 2.5	Cascade Tunnel downstream section roof top	57
Fig 2.6	Screens at the exit plane of the tunnel	58
Fig 2.7	Schematics of the aluminum pressure tabs (not on scale)	58
Fig 2.8	Cross section of the GE rotor B blade used in the Cascade	59
Fig 2.9	General View of the Cascade. Passage 4, where measurements have been taken is indicated by the white arrow	59
Fig 2.10	Cross section of the suction slots (not on scale)	60
Fig 2.11	Bleeding	61
Fig 2.12	Four Sensors Hot-Wire Probe	61
Fig 2.13	Hot-Wire Probe in the calibration equipment	62
Fig 2.14	Traverse System	63
Fig 2.15	Probe holders	63
Fig 2.16	Schematics of the grid	64
Fig 2.17	Grid placed at 63in. from the middle of the cascade leading edge line	64
Fig 2.18	Final pressure distribution after calibration	65
Fig 3.1	Scheme showing a blade	66

	passage, the 8 measurement planes, the axial-tangential and center stream line aligned reference systems	
Fig 3.2	Scheme of the viscous region. The blade wakes, lower end-wall boundary layer and tip leakage vortex can be visualized	66
Fig 3.3	Isotropic and homogeneity conditions	67-69
Fig 3.4	Mean stream-wise velocity contour plots, with and w/o the grid	70-71
Fig 3.5	Maximum mean velocity deficit variation along the passage	72
Fig 3.6	Cross flow vector plots with the grid	72-73
Fig 3.7	Displacement thickness	74
Fig 3.8	Contour plots of stream mean-wise vorticity with and w/o the grid	75-76
Fig 3.9	Contour plots of turbulence kinetic energy with and w/o the grid	77-78
Fig 3.10	Contour plots of the mean velocity component in the axial direction	79
Fig 3.11	Contour plots of the mean velocity component in the y direction	80
Fig 3.12	Contour plots of the mean velocity component in the tangential direction	81
Fig 3.13	Contours of mean velocity magnitude at $y/ca = 0.73$ with the turbulence grid.	82
Fig 3.14	Contour plot of Reynolds stresses at $y/ca = 0.73$ with the turbulence grid	83-84
Fig 3.15	Variation of the Reynolds stresses along the middle passage streamline	84
Fig 3.16	Integral length scale distribution at $y=0.73ca$	85-86

Fig 3.17	Autospectra component at 6 different locations along the middle passage stream-line	86-87
Fig 4.1	Fluid particle suffering non-homogeneous distortion due to a blade row	88
Fig 4.2	Schematic for the Drift function calculation	89
Fig 4.3	Close up view of the grid at the leading edge of blade 4 for the RANS calculation	90
Fig 4.4	RDT predictions of the Reynolds stresses	91-92
Fig 4.5	Decay of the Reynolds stresses due to viscous effects	92-93
Fig 4.6	RDT predictions of the Reynolds stresses plus viscous effects	94-95
Fig 4.7	RDT predictions of the integral length scales	95-96
Fig 4.8	Spectra comparison between measurements and predictions	97-98
