

## Licenses and Copyright

The following policy applies to all PLOS journals, unless otherwise noted.

### What Can Others Do with My Original Article Content?

PLOS applies the [Creative Commons Attribution \(CC BY\) license](#) to articles and other works we publish. If you submit your paper for publication by PLOS, you agree to have the CC BY license applied to your work. Under this Open Access license, you as the author agree that anyone can reuse your article in whole or part for any purpose, for free, even for commercial purposes. Anyone may copy, distribute, or reuse the content as long as the author and original source are properly cited. This facilitates freedom in re-use and also ensures that PLOS content can be mined without barriers for the needs of research.

### May I Use Content Owned by Someone Else in My Article?

If you have written permission to do so, yes. If your manuscript contains content such as photos, images, figures, tables, audio files, videos, etc., that you or your co-authors do not own, we will require you to provide us with proof that the owner of that content (a) has given you written permission to use it, and (b) has approved of the CC BY license being applied to their content. We provide a form you can use to ask for and obtain permission from the owner. [Download the form \(PDF\)](#).

### What Are Acceptable Licenses for Data Repositories?

If any relevant accompanying data is submitted to repositories with stated licensing policies, the policies should not be more restrictive than CC BY.

### Removal of Content Used Without Clear Rights

PLOS reserves the right to remove any photos, captures, images, figures, tables, illustrations, audio and video files, and the like, from any paper, whether before or after publication, if we have reason to believe that the content was included in your paper without permission from the owner of the content.

### How Does One Give Proper Attribution for Use of Content?

When citing a PLOS research article, use the "Vancouver style", as outlined in our [Submission Guidelines](#). For example:

Kaltenbach LS et al. (2007) Huntingtin Interacting Proteins Are Genetic Modifiers of Neurodegeneration. *PLOS Genet* 3(5): e82.  
doi:10.1371/journal.pgen.0030082.

When citing non-article content from a PLOS website (e.g., blog content), provide a link to the content, and cite the title and author(s) of that content.

For examples of proper attribution to other types of content, see websites such as [Open.Michigan](#).

## Permissions

ASM publishes Genome Announcements content under a Creative Commons Attribution license. Starting in 2016, articles are covered under a **Creative Commons Attribution 4.0 International license**. The author(s) retains copyright under this license. Others may copy, distribute, adapt, reorganize, and build upon the published work, as long as credit to the author and original article is given, and the new work, which includes the previously published content, is licensed under identical terms. (Note that articles published prior to 2016 are covered by the **Creative Commons Attribution 3.0 Unported license**.)

[View License Deed](#) | [View Legal Code](#)

If you have any questions about the permissions process, please direct your inquiry to [journals@asmusa.org](mailto:journals@asmusa.org).

## Commercial Reprints and ePrints

If you are interested in placing a commercial reprint order, please send an email to [reprints2@cadmus.com](mailto:reprints2@cadmus.com).

Reprints of American Society for Microbiology (ASM) content are similar to the online PDF version, professionally printed on quality paper using the entire article. The minimum commercial reprint order quantity is 500 reprints. All reprints of ASM journal articles will carry an ASM disclaimer on the title page of the article. The following ASM-

  - How is peer review done at PeerJ / PeerJ Computer Science?
  - [What Open Access license do you use?](#)
- We publish all content under the prevailing CC BY licence (currently 4.0). This is the same license used by other major Open Access publishers (such as PLoS or BioMedCentral, for example). Anyone who re-uses the published content must attribute the author(s) and the original source, but otherwise they are free to re-use it as they see fit. This license meets all definitions of 'true' Open Access, and complies with any institutional or funder OA mandates that may exist.
